

### Product Description

RFMD's SGL0363Z is a low power, low noise amplifier. It is designed for 2.7V to 3.3V battery operation. The matching networks are implemented externally which allows for optimum narrow-band performance with 20dB typical gain and 1.1dB noise figure from 200MHz to 900MHz. This RFIC uses the latest Silicon Germanium HBT process.

Pin	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor and matching components as shown in the application schematics.
2, 5	GND	Connect to ground per application circuit drawing. Series feedback used to improve IRL.
3	GND	Ground active bias tied internally to pin 2 and 5.
4	RF OUT/VD	RF output and bias pin. Bias should be supplied to this pin through an external RF choke.
6	VPC	V <sub>PC</sub> is the bias control pin for the active bias network.
