

SGM3139

6-Channel 1-Wire Dimming LED Driver with Ultra Low Dropout Current Source

GENERAL DESCRIPTION

The SGM3139 is a 6-channel ultra low dropout constant source parallel LED driver. The SGM3139 uses an internal resistor to set the bias current for six LEDs, which are matched to $\pm 3\%$.

The SGM3139 incorporates a single wire interface to program the output current at 16 continuous steps. It has an internal deglitch circuit for filtering the noise of the EN input.

The SGM3139 requires only a 35mV dropout voltage at a 20mA load. The feature makes SGM3139 ideal for battery-operated systems, such as personal digital assistants.

The SGM3139 is available in Green TQFN-3x3-16L and TDFN-3x3-10L packages and is specified over an ambient temperature range of -40°C to $+85^{\circ}\text{C}$.

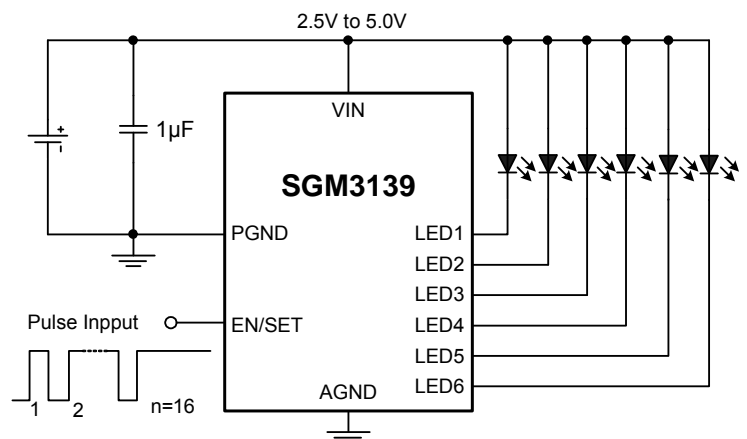

APPLICATIONS

- Wireless Handsets
- MP3, MP4, and PMP
- Cellular Phones
- Portable Communication Devices
- Digital Cameras, Camcorders
- PDA's, Palmtops, and Handy Terminals
- Battery-Powered Equipment

FEATURES

- Ultra Low Dropout: 35mV/20mA
- Support up to 6 LEDs
- LED Sink Current 20mA
- $\pm 3\%$ LED Current Matching
- Deglitch Circuit
- Thermal Shutdown Protection
- 16-Step Brightness Control
- No EMI and Switch Noise
- Operating Temperature Range: -40°C to $+85^{\circ}\text{C}$
- Available in Green TQFN-3x3-16L and TDFN-3x3-10L Packages

NOTES:

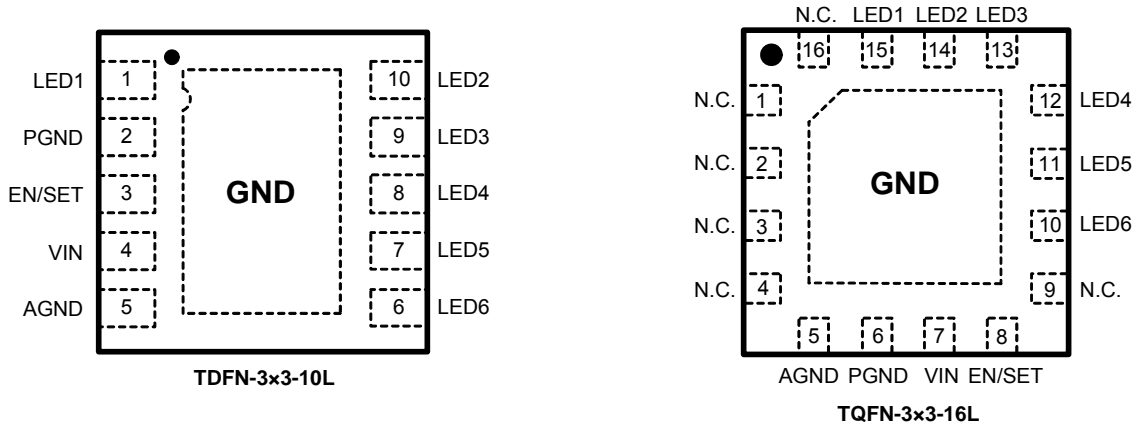

1. The thermal resistance figures are for general reference only. Actual thermal characteristics may vary with the PCB layout, size of metal trace, the thermal conduction path between metal layers and the environment of the system.
2. Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION

This integrated circuit can be damaged by ESD if you don't pay attention to ESD protection. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

SGMICRO reserves the right to make any change in circuit design, specification or other related things if necessary without notice at any time. Please contact SGMICRO sales office to get the latest datasheet.

APPLICATION INFORMATION

LED Connection

The SGM3139 supports up to 6 white LEDs. The six LEDs are connected from VIN to TQFN-3×3-16L package’s pin 10, 11, 12, 13, 14 and 15 respectively. For TDFN-3×3-10L package, cathodes of white LEDs are connected to pin1, 6, 7, 8, 9, and 10. The LED pins can be left floating if the white LEDs are not used.

Brightness Control

The SGM3139 implements a pulse dimming method to control the brightness of white LEDs. Users can easily configure the LED current from 1.25mA to 20mA by a serial pulse. The dimming of white LEDs’ current can be achieved by applying a pulse signal to the EN/SET pin. There are totally 16 steps of current that could be set by users. The detail operation of brightness dimming is showed in the Figure 1.
