

**HID & SYSTEM MANAGEMENT PRODUCTS, SYSTEM MANAGEMENT FAMILY PRELIMINARY**
**DESCRIPTION**

The USB-Adapt™ SH3301 is a single IC that converts PS/2 keyboard and mouse data to USB 1.1.

The USB-Adapt™ is ideal for system legacy support, enabling seamless connection of standard PS/2 devices (mice or keyboards) to USB.

The IC offers two hot-pluggable and hot-swappable PS/2 ports; either port can accept a mouse or a keyboard. In addition, the USB-Adapt™ auto-detects and transparently supports the wheel function of wheel mice.

**FEATURES**

- Interfaces PS/2 devices to USB
- Complies with USB 1.1 specification
- Provides two PS/2 ports
- PS/2 ports support mouse wheel functionality
- Works with standard Windows keyboard and mouse drivers
- Devices are hot-pluggable
- PS/2 ports are auto-selectable and hot-swappable – a mouse or keyboard can be used in either port
- Easy to implement
- Few external components required

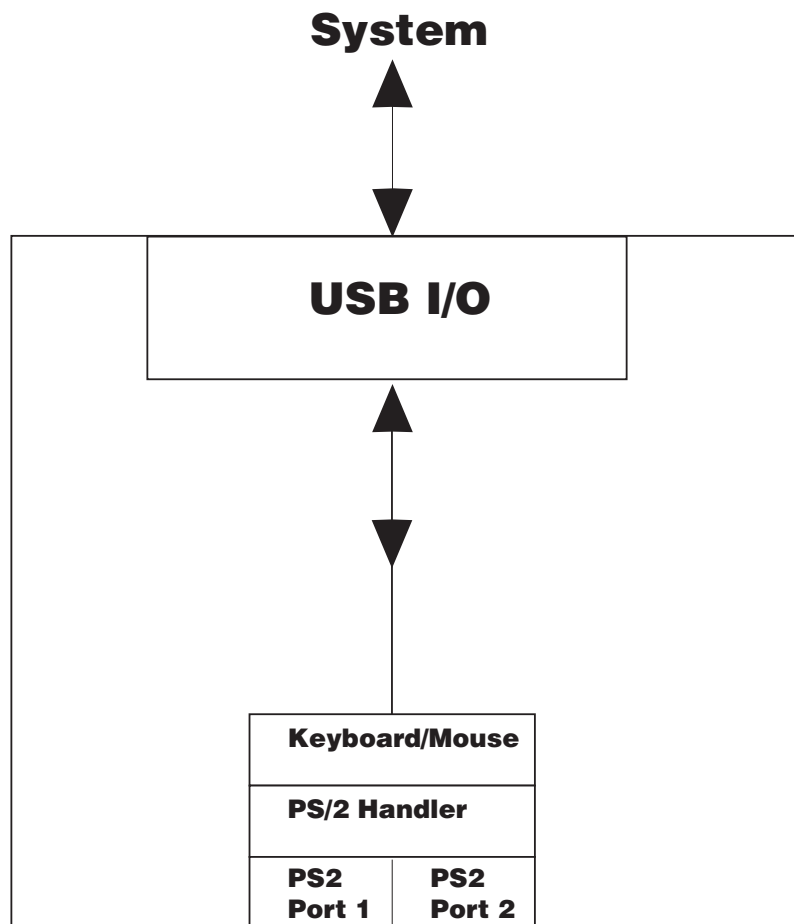

**APPLICATIONS**

- System legacy support

## USB FUNCTIONALITY

The USB-Adapt™ is a low-speed composite USB 1.1 device that interfaces PS/2. It supports the USB Human Interface Devices (HID) class specification. It uses two interrupt endpoints for the PS/2 devices.

The USB-Adapt™ handles the merging of all this data, and sends the data to the host system.

## PS/2 PORTS

The two PS/2 ports allow the user to connect legacy PS/2 devices to the USB host system. Standard 104-key keyboards and PS/2 mice, with support for MouseWheel functionality, can be hot-plugged at either of the PS/2 ports and immediately begin communicating with the host.
