DESCRIPTION

The Si4719CY is two level-shifted p-channel MOSFETs. Operating together, these MOSFETs can be used as a reverse blocking switch for battery disconnect applications. It is a solution for multiple battery technology designs or designs that require isolation from the power bus during charging.

The Si4719CY is available in a 16-pin SOIC package and is rated for the commercial temperature range of -25 to 85°C .

- Notes
- $V_{SD} \leq 30 V_{DC}$
 - Device mounted with all leads soldered to 1" x 1" FR4 with laminated copper PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
