

## High Voltage Green-Mode PWM Controller with OTP Function

### GENERAL DESCRIPTION

SI8016H is a highly integrated current mode PWM control for flyback converter, optimized for high performance, low standby power consumption and cost effective offline flyback converter applications.

The SI8016H built-in multiple protection with VCC under voltage lockout (UVLO), VCC over voltage protection (OVP), high voltage startup circuit, VCC clamp, GATE clamp, cycle-by-cycle current limiting (OCP), over load protection (OLP), and leading-edge blanking (LEB) of the current sensing to prevent circuit damage occurred under abnormal conditions.

The SI8016H also has an X-cap discharge function to discharge the X-cap when the input is unplugged and Brown-out protection function.

The SI8016H is available in an SOP-7L package and require very few external devices for operation.
