

DATA SHEET

SKY66298-11: 900 to 990 MHz High-Efficiency 4 W Power Amplifier

Applications

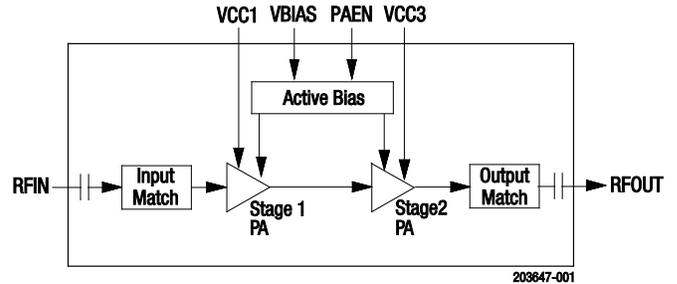

- FDD and TDD 2G/3G/4G LTE systems
- 3GPP band 8 small-cell base stations
- Driver amplifier for micro-base and macro-base stations
- Active antenna array and massive MIMO

Features

- High efficiency: PAE = 40% @ +28 dBm
- High linearity: +28 dBm with < -50 dBc linearized ACLR (20 MHz LTE, 8.5 dB PAR signal)
- High gain: 34 dB
- Excellent input and output return loss: to 50 Ω system
- Integrated active bias: performance compensated over temp
- Integrated enable On/Off function: PAEN = 1.7 to 2.5 V
- Single supply voltage: 5.0 V
- Pin-to-pin compatible PA family supporting all 3GPP bands
- Compact (16-pin, 5 × 5 × 1.3 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

SKY66298-11 is a high-efficiency fully input/output matched power amplifier (PA) with high gain and linearity. The compact 5 × 5 mm PA is designed for FDD and TDD 2G/3G/4G LTE small cell base stations operating from 900 to 990 MHz. The active biasing circuitry is integrated to compensate PA performance over temperature, voltage, and process variation.

The SKY66298-11 is part of high efficiency, pin-to-pin compatible PA family supporting all 3GPP bands.

A block diagram of the SKY66298-11 is shown in Figure 1. The device package and pinout for the 16-pin device are shown in Figure 2. Table 1 lists the pin-to-pin compatible parts in the PA family. Signal pin assignments and functional pin descriptions are described in Table 2.

Table 1. Pin-to-Pin Compatible PA Family

Part Number	Frequency (MHz)	3GPP Band
SKY66296-11	700 to 800	Bands 12, 13, 14, 17, 29, and 44
SKY66289-11	750 to 850	Bands 20, 28, and 68
SKY66295-11	800 to 900	Bands 5, 18, 19, 20, 26 and 27
SKY66298-11	900 to 990	Band 8
SKY66291-11	1805 to 1880	Bands 3 and 9
SKY66299-11	1900 to 2000	Bands 2, 25, 33, 36, and 37
SKY66294-11	2000 to 2300	Bands 1, 4, 10, and 23
SKY66292-11	2300 to 2400	Bands 30 and 40
SKY66297-11	2490 to 2690	Bands 7, 38, and 41
SKY66293-21	3400 to 3600	CBRS, Bands 22, 42,43, and 48
SKY66288-11	5150 to 5925	Band 46

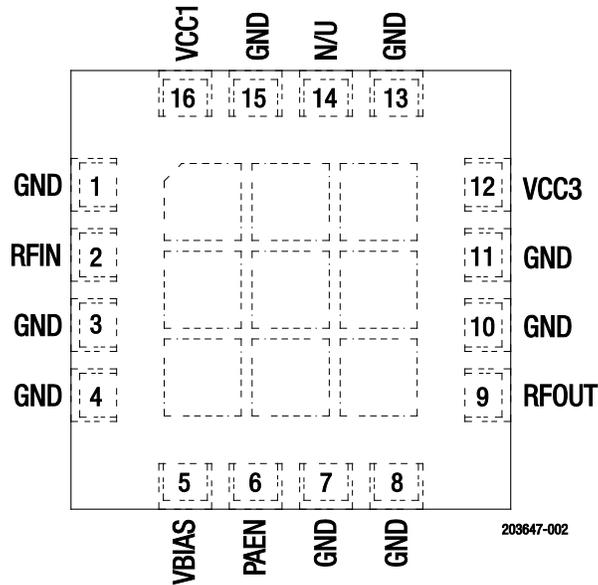

Figure 2. SKY66298-11 Pinout (Top View)

Table 2. SKY66298-11 Signal Descriptions¹

Pin	Name	Description	Pin	Name	Description
1	GND	Ground	9	RFOUT	RF output port
2	RFIN	RF input port	10	GND	Ground
3	GND	Ground	11	GND	Ground
4	GND	Ground	12	VCC3	Stage 3 collector voltage
5	VBIAS	Bias voltage	13	GND	Ground
6	PAEN	PA enable	14	N/U	Not used
7	GND	Ground	15	GND	Ground
8	GND	Ground	16	VCC1	Stage 1 collector voltage

¹ The center ground pad must have a low inductance and low thermal resistance connection to the application’s printed circuit board ground plane.

Technical Description

The matching circuits are contained within the device. An on-chip active bias circuit is included within the device for both input and output stages, which provides excellent gain tracking over temperature and voltage variations.

The SKY66298-11 is internally matched for maximum output power and efficiency. The input and output stages are independently supplied using the VCC1 and VCC3 supply lines (pins 16 and 12, respectively). The DC control voltage that sets the bias is supplied by the VCBIAS signal (pin 5).

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY66298-11 are provided in Table 3. Recommended operating conditions are specified in Table 4 and electrical specifications are provided in Table 5.

Table 3. SKY66298-11 Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
RF input power (CW, 50 Ω load)	P _{IN}		+8	dBm
Supply voltage (VCC1, VCC3, VBIAS)	V _{CC}		5.5	V
PA enable	V _{EN}		3	V
Operating temperature	T _C	-40	+100	°C
Storage temperature	T _{STG}	-55	+125	°C
Junction temperature	T _J		+150	°C
Power dissipation	P _D		1.2	W
Device thermal resistance	θ _{JC}		20.5	°C/W
Electrostatic discharge:				
Charged Device Model (CDM)			500	V
Human Body Model (HBM)			1000	V

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD HANDLING: Industry-standard ESD handling precautions must be adhered to at all times to avoid damage to this device.

Table 4. SKY66298-11 Recommended Operating Conditions

Parameter	Symbol	Min	Typ	Max	Units
Supply voltage (VCC1, VCC3, VBIAS)	V _{CC1} , V _{CC3} , V _{BIAS}	4.75	5	5.25	V
PA enable:	PAEN				
ON		1.7	2.0	2.5	V
OFF			0	0.5	V
PA enable current	I _{EN}		1	12	μA
Operating frequency	f	900		990	MHz
Operating temperature	T _C	-40	+25	+85	°C

Table 5. SKY66298-11 Electrical Specifications¹

(Vcc1 = Vcc3 = VBIAS = 5 V, PAEN = 2.0 V, f = 942.5 MHz, Tc = +25 °C, Input/Output Load = 50 Ω, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typ	Max	Units
Frequency	f		925		960	MHz
Small signal gain	IS21I	PIN = -30 dBm	32.5	34		dB
Input return loss	IS11I	PIN = -20 dBm	9.5	16		dB
Output return loss	IS22I	PIN = -20 dBm	9.5	12.3		dB
Reverse isolation ²	IS12I	PIN = -30 dBm		55		dB
ACLR @ +28 dBm	ACLR	POUT = +28 dBm (20 MHz LTE, 8.5 dB PAR signal)		-29	-27	dBc
Saturated output power	PSAT	CW, PIN = +5 dBm	+34	+35		dBm
Output power at 3 dB gain compression	P3dB	CW	+32.8	+33.8		dBm
2 nd harmonic	2fo	CW, POUT = +28 dBm		-55	-40	dBc
3 rd harmonic	3fo	CW, POUT = +28 dBm		-75	-60	dBc
Power-added efficiency	PAE	CW, POUT = +28 dBm	31	34		%
Quiescent current	ICQ	No RF signal		85	105	mA

¹ Performance is guaranteed only under the conditions listed in this table.

² Not tested in production. Verified by design.

Evaluation Board Description

The SKY66298-11 Evaluation Board is used to test the performance of the SKY66298-11 PA. An Application schematic is provided in Figure 3. Table 6 provides the Bill of Materials (BOM) list for Evaluation Board components.

An assembly drawing for the Evaluation Board is shown in Figure 4. Layer details are shown in Figure 5. Layer details physical characteristics are noted in Figure 6.

Circuit Design Considerations

The following design considerations are general in nature and must be followed regardless of final use or configuration:

- Paths to ground should be made as short as possible.
- The ground pad of the SKY66298-11 has special electrical and thermal grounding requirements. This pad is the main thermal conduit for heat dissipation. Because the circuit board acts as the heat sink, it must shunt as much heat as possible from the device.

Therefore, design the connection to the ground pad to dissipate the maximum wattage produced by the circuit board. Multiple vias to the grounding layer are required.

NOTE: A poor connection between the ground pad and ground increases junction temperature (T_J), which reduces the life of the device.

Evaluation Board Test Procedure

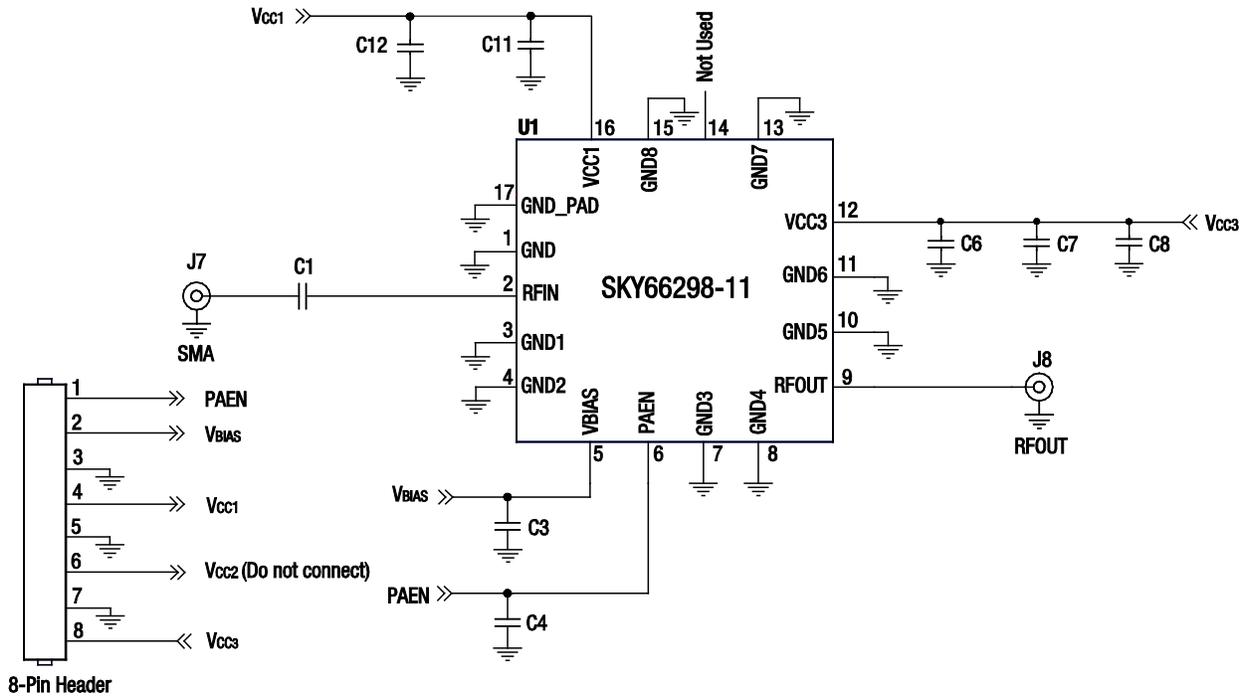

Turn-On Sequence

1. Connect 50 Ω test equipment or load to the input and output RF ports of the Evaluation Board.
2. Connect the DC ground.
3. Connect all VCCs and VBIAS lines to a +5 V supply. Connect PAEN to a 2.0 V supply.
4. Without applying RF, turn on the 5 V supply, then turn on the 2 V PAEN.
5. Apply RF signal data at -30 dBm and observe that the gain of the device complies with the values in Table 5. Begin measurements.

Turn-Off Sequence

1. Turn off the RF input to the device.
2. Turn off PAEN (set to 0 V).
3. Turn off all VCCs and VBIAS.

NOTE: It is important to adjust the VCC voltage sources so that +5 V is measured at the board. High collector currents drop the collector voltage significantly if long leads are used. Adjust the bias voltage to compensate.

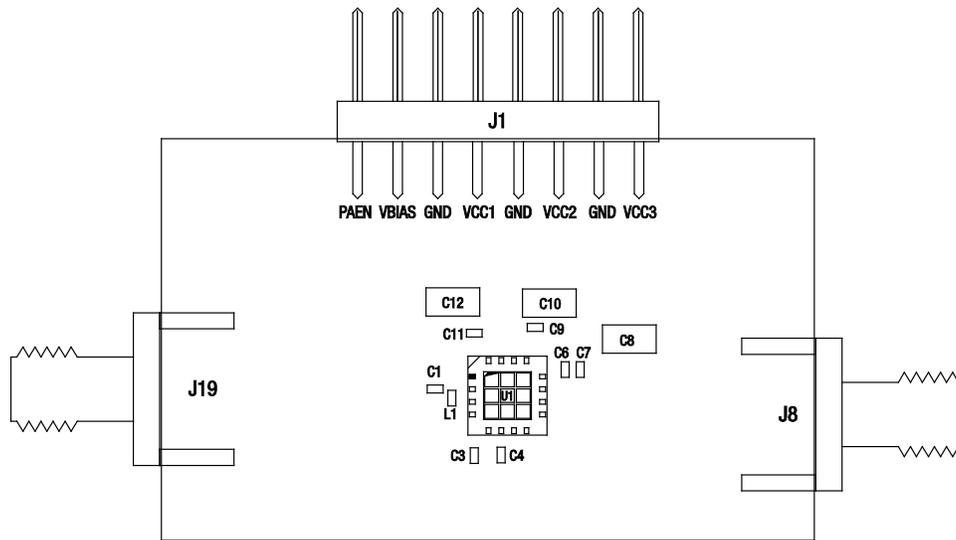

Note: The C1 component shown in this assembly is a 0 Ω resistor.

Application Circuit Notes

Center Ground. It is extremely important to sufficiently ground the bottom ground pad of the device for both thermal and stability reasons. Multiple small vias are acceptable and work well under the device if solder migration is an issue.

GND (pins 1, 3, 4, 7, 8, 10, 11, 13, and 15). Attach all ground pins to the RF ground plane with the largest diameter and lowest inductance via that the layout allows. Multiple small vias are acceptable and will work well under the device if solder migration is an issue.

VBIAS (pin 5). The bias supply voltage for each stage, nominally set to +5 V.

RFOUT (pin 9). Amplifier RF output pin ($Z_0 = 50 \Omega$). The module includes an onboard internal DC blocking capacitor. All impedance matching is provided internal to the module.

VCC1 and VCC3 (pin 16 and 12, respectively). Supply voltage for each stage collector bias is nominally set to 5 V. The evaluation board has inductors L1 and L2. These are place holders, and should be populated with 0Ω resistors. Bypass and decoupling capacitors C6 through C12 should be placed in the approximate location shown on the evaluation board assembly drawing, although exact placement is not critical.

RFIN (pin 2). Amplifier RF input pin ($Z_0 = 50 \Omega$). The module includes an onboard internal DC blocking capacitor. All impedance matching is provided internal to the module.

Package Dimensions

The typical part marking for the SKY66298-11 is shown in Figure 7. The PCB layout footprint for the SKY66298-11 is shown in Figure 8. Package dimensions are shown in Figure 9, and tape and reel dimensions are provided in Figure 10.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY66298-11 is rated to Moisture Sensitivity Level 3 (MSL3) at 250 °C. It can be used for lead or lead-free soldering. For additional information, refer to Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

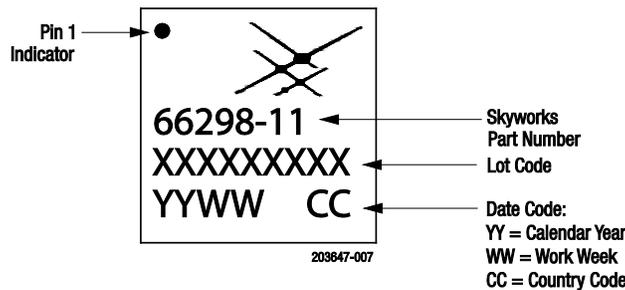

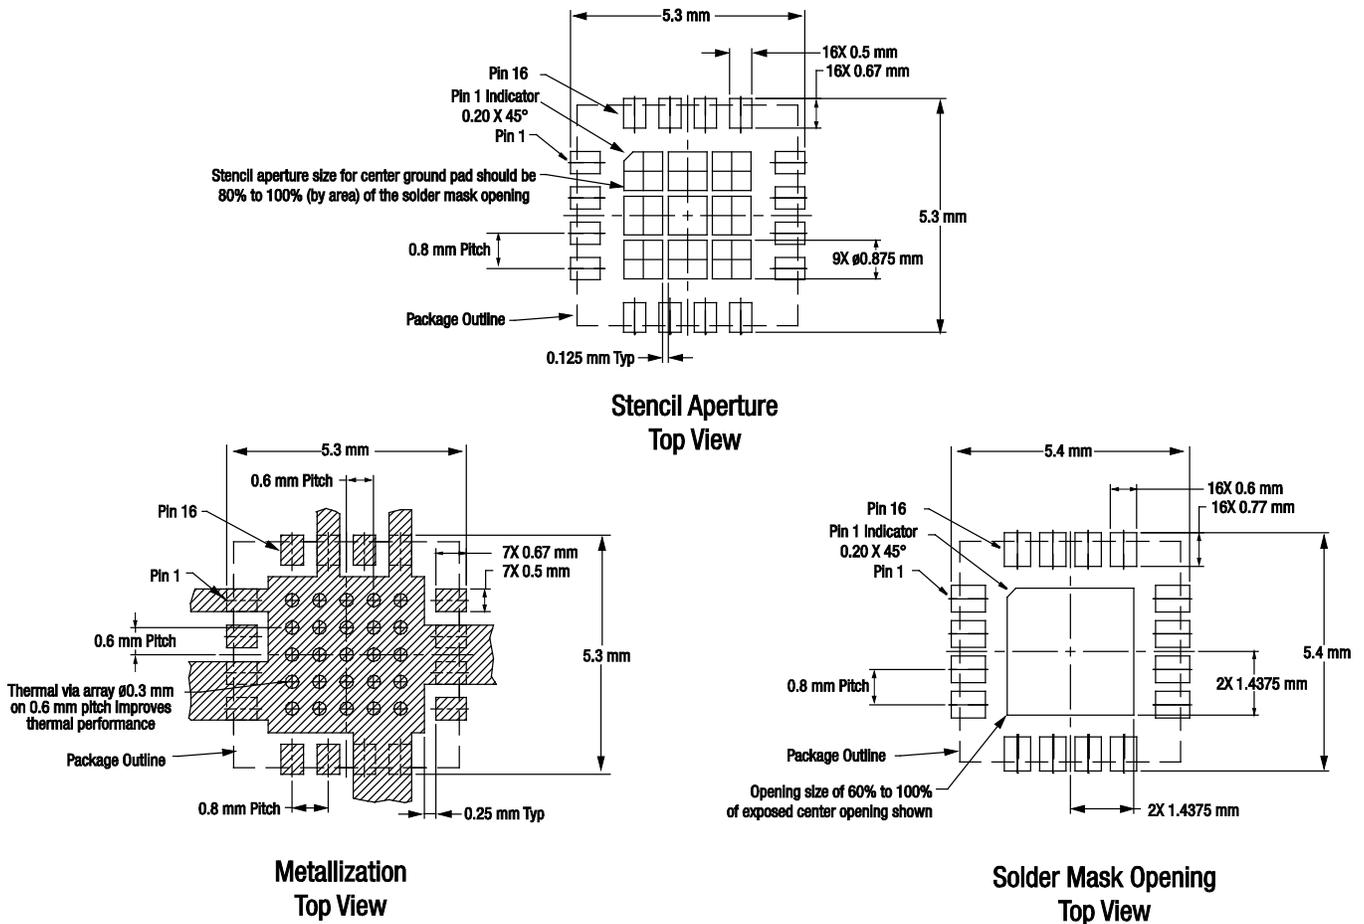

Figure 7. Typical Part Marking

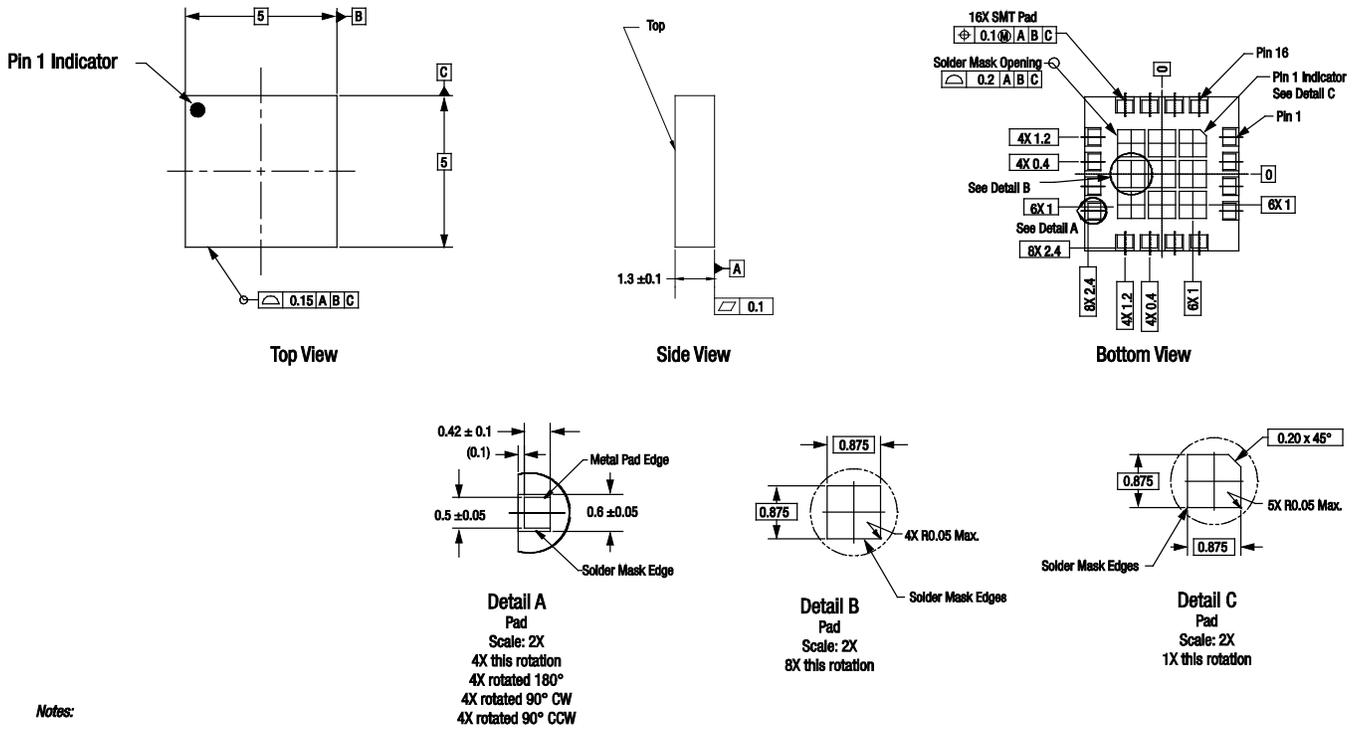

Notes:

1. Thermal vias should be resin filled and capped in accordance with IPC-4761 type VII vias.
2. Recommended Cu thickness is 30 to 35 μm .
