

Security & Chip Card ICs

SLE 66C644P

16-Bit Security Controller
with Memory Management and Protection Unit
in 0.22 μm CMOS Technology
208 Kbytes ROM, 4 Kbytes RAM, 64 Kbytes EEPROM
112-Bit DDES Accelerator

SLE 66C644P Short Product Information		Ref.: SPI_SLE 66C644P_1102.doc
This document contains preliminary information on a new product under development. Details are subject to change without notice.		
Revision History: Current Version 11.02		
Previous Releases: 04.02

All Rights Reserved.

Attention please!

The information herein is given to describe certain components and shall not be considered as warranted characteristics.

Terms of delivery and rights to technical change reserved.

We hereby disclaim any and all warranties, including but not limited to warranties of non-infringement, regarding circuits, descriptions and charts stated herein.

Infineon Technologies is an approved CECC manufacturer.

Information

For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office in Germany or our Infineon Technologies Representatives world-wide (see address list).

Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.

Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

16-Bit Security Controller with MMU in 0.22µm CMOS Technologie 208 Kbytes ROM, 4 Kbytes RAM, 64 Kbytes EEPROM, 112-Bit DDES

Features

- 16-bit microcomputer in 0.22 µm CMOS technology
- Instruction set opcode compatible with standard SAB 8051 processor
- Enhanced 16-bit arithmetic
- Additional powerful instructions optimized for chip card applications
- Dedicated, non-standard architecture with **execution time 6 times faster (18 times by PLLmax)** than standard SAB 8051 processor at same external clock
- **206 Kbytes User ROM** for application programs
- Additional 2 Kbytes reserved ROM for Resource Management System (RMS+ Superslim) with intelligent EEPROM write/erase routines
- **64 Kbytes Superslim-EEPROM**
- **4 Kbytes XRAM**, 256 Bytes IRAM
- **Memory Management and Protection Unit (MMU)**
- **Dual Key Triple DES (DDES) and EC2 GF (2ⁿ) Accelerator**
- CRC Module
- Interrupt Module
- Two 16-bit Autoreload Timer
- **PLL up to 15 MHz**
- Power saving sleep mode
- **Ext. Clock freq. 1 to 7.5 MHz for int. Clock £ 15 MHz @ 2.7V-5.5V**
Ext. Clock freq. 1 to 5 MHz for int. Clock £ 11 MHz @ 1.62V-5.5V
- **UART for handling serial interface** in accordance with ISO/IEC 7816 part 3 **supporting transmission protocols T=1 and T=0**
- I/O routines realized in software executable

- Supply voltage range: 1.62 V to 5.5 V
- Current consumption
< 10mA @ 5.5 V
< 6 mA @ 3.3 V
< 4 mA @ 1.98 V
- Temperature range: -25 to +85°C
- ESD protection larger than 6 kV

Superslim-EEPROM

- Reading and programming byte by byte
- Flexible page mode for 1 to 64 bytes write/erase operation
- 32 bytes security area (OTP)
- Fast personalization mode 0.63 ms @15MHz
- Erase + Write time < 4.0 ms @15MHz
- **Minimum of 500.000 write/erase cycles at 25°C**
- Data retention for a minimum of 10 years
- EEPROM programming voltage generated on chip

Memory Management and Protection Unit

- Addressable memory up to 1 Mbyte
- Separates OS (system) and application (user)
- System routines called by traps
- OS can restrict access to peripherals in application mode
- Code execution from XRAM possible

Security Features

Operation state monitoring mechanism

- Low and high voltage sensors
- Frequency sensors and filters
- Light Sensor
- Glitch Sensor
- Temperature Sensor
- Life Test Function for Sensors

Testmode

- Irreversible Lock - Out of testmode

Anti Snooping

- HW-countermeasures against SPA/DPA-, Timing- and DFA-attacks (differential fault analysis – DFA)
- CRC – Module
- Non standard dedicated Smart Card CPU – Core
- Active Shield with automatic and user controlled attack detection

Support

- HW-& SW-Tools (Emulator, ROM Monitor, Card Emulator, Simulator, Softmasking)
- Application notes

Supported Standards

- ISO/IEC 7816
- EMV 2000
- GSM 11.11, 11.12, 11.18
- ETSI TS 102 221

Memory Security

- 16 bytes security PROM, hardware protected
- Unique chip identification number for each chip
- MED - memory encryption/decryption device for XRAM, ROM and EEPROM
- True Random Number Generator with Firmware test function
- Security optimised layout and layout scrambling

Performance DDES-EC2 Accelerator

Operation	Data Block Length	Encryption Time for an 8-Byte Block incl. Data Transfer		
		5 MHz	10 MHz	15 MHz
56-bit Single DES Encryption	64 bit	23 μ s	11 μ s	8 μ s
112-bit Triple DES Encryption	64 bit	35 μ s	17 μ s	12 μ s
	Operand Length	Calculation Time		
		5 MHz	10 MHz	15 MHz
Elliptic Curves GF(2 ⁿ) EC-DSA Signature Generate	192 bit	285 ms	142 ms	95 ms
Elliptic Curves GF(2 ⁿ) EC-DSA Signature Verify	192 bit	540 ms	270 ms	180 ms

Ordering Information

Type	Package ¹	Voltage Range	Temperature Range	Frequency Range (ext. clock frequency)
SLE 66C644P M5	M5	2.7 V - 5.5 V	– 25°C to + 70°C	1 MHz - 5 MHz
SLE 66C644P C	Die	or 1.62 V – 5.5 V	or – 25°C to + 85°C	or 1 MHz - 7.5 MHz

For ordering information please refer to the databook and contact your sales representative.

Production sites:

- Dresden (Germany) SLE 66CxxxP
- UMC (Taiwan) SLE 66CxxxPU
- Altis (France) SLE 66CxxxPA

¹ available as wire-bonded module (M5) for embedding in plastic cards or as die (C) for customer packaging

Pin Configuration

Pin Definitions and Functions

Symbol	Function
VCC	Operating voltage
RST	Reset input
CLK	Processor clock input
GND	Ground
I/O	Bi-directional data port

General Description

SLE 66C644P is a member of Infineon Technologies high-end security controller family in advanced 0.22 μm CMOS technology. The CPU provides the high efficiency of the SAB 8051-instruction set extended by additional powerful instructions together with enhanced performance, memory sizes and security features. The internal clock frequency can be adjusted up to 15 MHz independent of the clock rate of the terminal with the help of the PLL.

The controller IC offers 206 Kbytes of User-ROM, 256 bytes internal RAM, 4096 bytes XRAM and 64 Kbytes EEPROM with Superslim. The Memory Management and Protection Unit allows a secure separation of the operating system and the applications. Furthermore the MMU makes a secure downloading of applications possible after the personalization of a card. These new features meet the requirements of the next generation of multi application operating systems. For code compatibility to the SLE 66CxxS family, a transparent mode for the MMU is available which allows you to keep the memory mapping of the SLE 66CxxS products.

Figure 2: Block Diagram SLE 66C644P

The CRC module allows the easy generation of checksums according to ISO/IEC 3309 (16-Bit-CRC). To minimize the overall power consumption, the chip card controller IC offers a sleep mode. The UART supports the half-duplex transmission protocols T=0 and T=1 according to ISO/IEC 7816-3. All relevant transmission parameters can be adjusted by software, as e.g. the clock division factor, direct/inverse convention and the number of stop bits. Additionally, the I/O port can be driven by communication routines realized in software.

The random number generator (RNG) is able to supply the CPU with true random numbers under all conditions.

As an important measure, the chip provides a new and enhanced level of on-chip security features. The DES accelerator supports symmetrical crypto algorithms according to the Data Encryption Standard in the Electronic Code Book Mode.

In conclusion, the SLE 66C644P fulfills the requirements of today's chip card applications, as GSM, UMTS, and offers a powerful platform for future multi application cards. The SLE 66C644P integrates outstanding memory sizes, additional peripherals in combination with enhanced performance and optimized power consumption on a minimized die size. Therefore, the SLE 66C644P offers the basis for a generation of new chip card applications.
