2. See Application Diagram below regarding C<sub>LOAD</sub> = 2 x (50 μF + 2.2 μH).

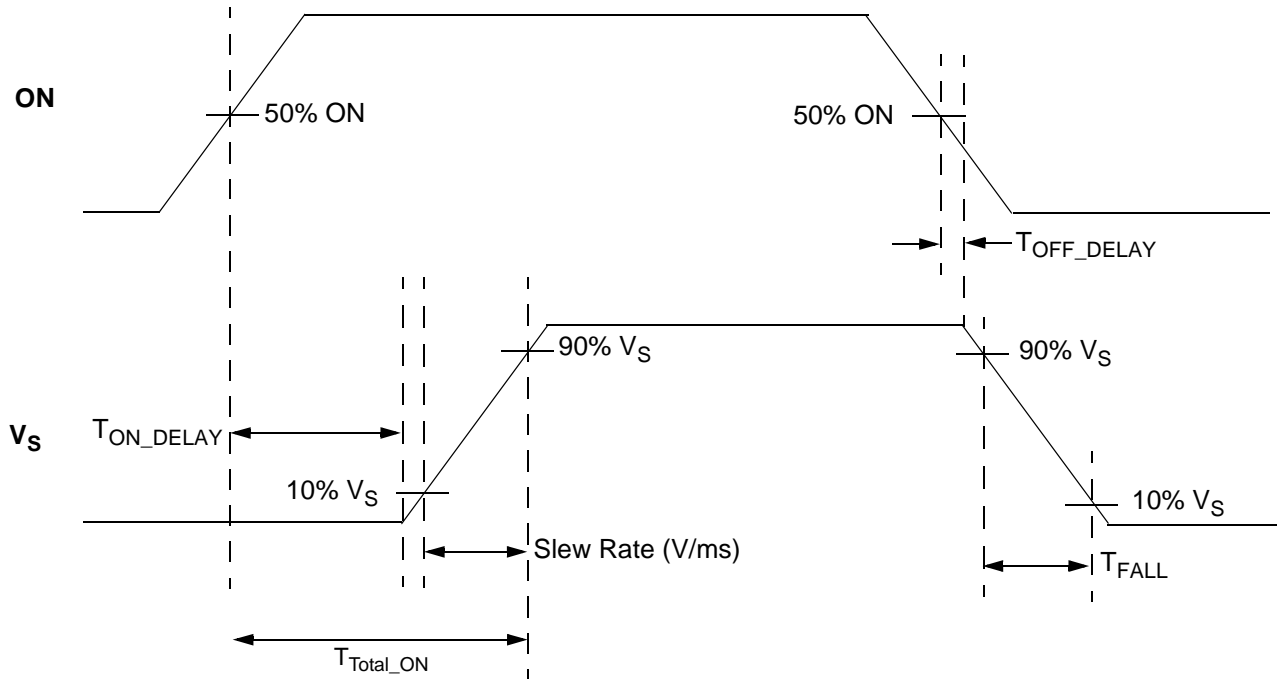

### Application Diagram (Source loading > 10 μF)

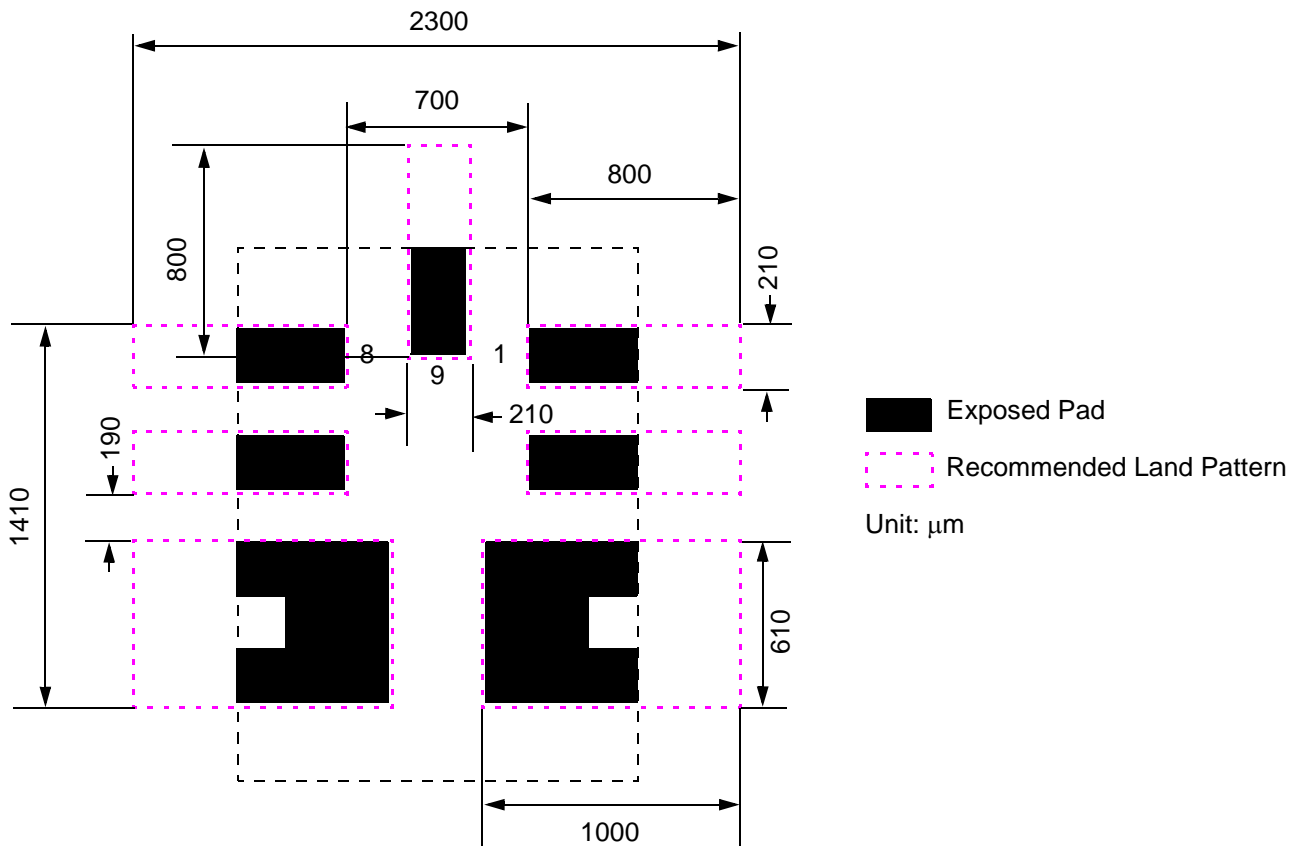

Capacitive loads > 10 μF directly on the S pin may result in nonlinear output ramping. In cases where > 10 μF load capacitance is required, we recommend decoupling the load(s) with 2.2 μH inductors while putting a 1 μF capacitor on V<sub>S</sub> as shown above in order to guarantee linear ramping and inrush current limiting.
