

OVERVIEW

The SM1124 Series are melody pager multi-melody ICs fabricated in NPC's Molybdenum-gate CMOS. A maximum of 16 tunes can be stored in programmable ROM, and the Molybdenum-gate CMOS process realizes small-sized packages and low power dissipation.

FEATURES

- Maximum of 16 tune selections (with up to 512 steps)
- Level hold playback mode
- External reference clock input. The frequency can be selected from the following 12 settings.
 - Playback frequency of each song varies (8 frequencies)
 - 32.768 kHz system: 32.768 and 65.536 kHz
 - 37.5 kHz system: 37.5 and 75.0 kHz
 - 38.4 kHz system: 38.4 and 76.8 kHz
 - 48.0 kHz system: 48.0 and 96.0 kHz
 - Playback frequency of all songs is fixed (4 frequencies)
 - 32.768 kHz system: 131.072 kHz
 - 37.5 kHz system: 150.0 kHz
 - 38.4 kHz system: 153.6 kHz
 - 48.0 kHz system: 192.0 kHz
- 2-pin serial data tune selection
- Power save function
- External clock gating in non-play mode.
- 2.4 to 3.6 V supply voltage
- 8-pin plastic SOP package
- Molybdenum-gate CMOS process

PINOUT

8-pin SOP

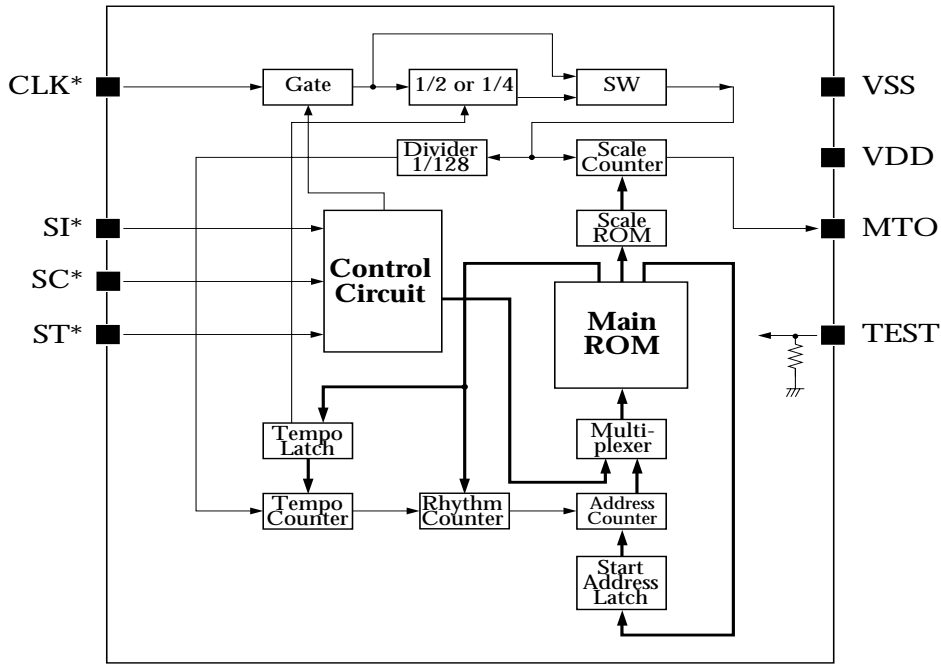

PACKAGE DIMENSIONS

Unit: mm

BLOCK DIAGRAM

*: Built-in Schmitt-Triger Circuit.

PIN DESCRIPTION

Number	Name	I/O	Function
1	CLK	I	External reference clock input (Schmitt-trigger circuit and gate circuit built-in)
2	SI	I	Playback control serial interface data input pin ¹
3	SC	I	Playback control serial interface clock input pin ¹
4	ST	I	Playback start/stop control signal input pin ¹
5	TEST	I	Test input pin. Leave open or tie to VSS. (Pull-down resistance built-in)
6	MTO	O	Playback signal output pin
7	VDD	-	Supply pin (+)
8	VSS	-	Ground pin

1. Pins SI, SC and ST have a built-in Schmitt-trigger circuit.

SPECIFICATIONS

Absolute Maximum Ratings

Parameter	Symbol	Condition	Rating	Unit
Supply voltage range	V_{DD}		-0.3 to 5.0	V
Input voltage range	V_{IN}		$V_{SS} - 0.2$ to $V_{DD} + 0.2$	V
Power dissipation	P_D		150	mW
Storage temperature range	T_{stg}		-40 to 125	°C
Soldering temperature	T_{sld}		255	°C
Soldering time	t_{sld}		10	s

Recommended Operating Conditions

$V_{SS} = 0$ V unless otherwise specified

Parameter	Symbol	Condition	Rating			Unit
			min	typ	max	
Supply voltage	V_{DD}		2.4	–	3.6	V
Operating temperature	T_{opr}		–20	–	70	°C

DC Characteristics

$T_a = -20$ to 70 °C, $V_{SS} = 0$ V, $V_{DD} = 2.4$ to 3.6 V unless otherwise specified

Parameter	Symbol	Condition	Rating			Unit
			min	typ	max	
Supply voltage	V_{DD}		2.4	3.0	3.6	V
Current consumption (1)	I_{DD1}	Non-playback mode, 25°C	–	–	0.5	μA
Current consumption (2)	I_{DD2}	Playback mode, MTO pin open	–	25	200	μA
Input voltage	V_{IH}	ST, SI, SC and CLK pins	$V_{DD} - 0.2$	–	V_{DD}	V
	V_{IL}		V_{SS}	–	$V_{SS} + 0.2$	V
Hysteresis width	V_T		0.2	1.0	–	V
Input current	I_{IH1}	ST, SI, SC and CLK pins, $V_{IH} = V_{DD}$, 25°C	–	–	0.5	μA
	I_{IL1}	ST, SI, SC and CLK pins, $V_{IL} = 0$ V, 25°C	–	–	0.5	μA
	I_{IH2}	TEST pin, $V_{IH} = V_{DD}$	–	–	200	μA
Open voltage	V_{OPN}	TEST pin	–	–	0.1	V
Output voltage	V_{OH}	MTO pin, $I_{OH} = 1$ mA	$V_{DD} - 0.4$	–	V_{DD}	V
	V_{OL}	MTO pin, $I_{OL} = 1$ mA	V_{SS}	–	$V_{SS} + 0.4$	V

AC Characteristics

$T_a = -20$ to 70 °C, $V_{SS} = 0$ V, $V_{DD} = 2.4$ to 3.6 V unless otherwise specified

Parameter	Symbol	Condition	Rating			Unit
			min	typ	max	
CLK pulse cycle	t_{CLK}	"CLK input clock" timing	5.0	–	–	μs
CLK HIGH-level pulsewidth	t_{CWH}		2.0	–	–	μs
CLK LOW-level pulsewidth	t_{CWL}		2.0	–	–	μs
SC pulsewidth	t_{SC}	"SC input clock" timing	5.0	–	–	μs
SC HIGH-level pulsewidth	t_{SWH}		2.0	–	–	μs
SC LOW-level pulsewidth	t_{SWL}		2.0	–	–	μs
SI-SC setup time	t_{DS}	"Serial input" timing	2.0	–	–	μs
SI-SC hold time	t_{DH}		2.0	–	–	μs

CLK input clock**SC input clock****Serial input****FUNCTIONAL DESCRIPTION****Control Functions****External reference clock**

The SM1124 can operate at 12 selectable external reference clock frequencies. Of these, 8 are selectable for each tune. When multiple external clock frequencies are input to a single IC, the clock must be switched during playback mode. Note that when the frequency in parentheses is selected, all tunes can only be played using that single fixed frequency.

- 32.768 kHz system: 32.768 kHz, 65.536 kHz, (131.072 kHz)
- 37.5 kHz system: 37.5 kHz, 75.0 kHz, (150.0 kHz)
- 38.4 kHz system: 38.4 kHz, 76.8 kHz, (153.6 kHz)
- 48.0 kHz system: 48.0 kHz, 96.0 kHz, (192.0 kHz)

The external reference clock input is used at any time as well as during playback mode. If a clock signal is input when not in playback mode (when ST is LOW), the gate circuit switches to cutoff the external reference clock signal from entering the device, preventing unwanted current flow.

Input during playback mode only

Input during non-playback mode

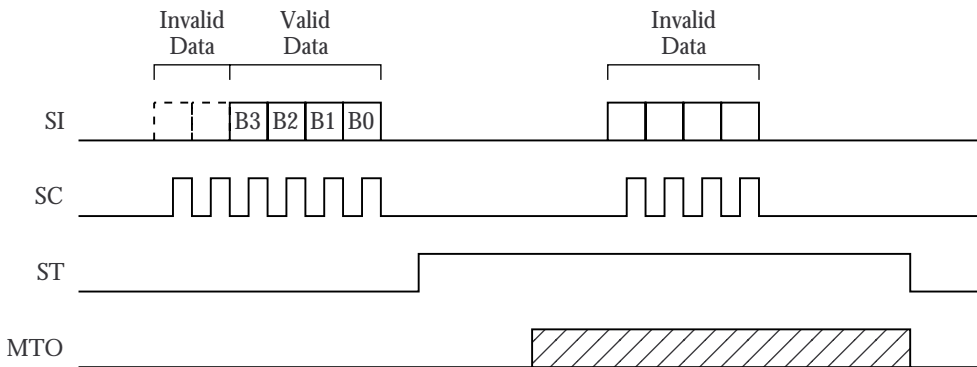

Playback control

The ST pin controls the start of playback. While ST is HIGH (VDD), the tune is played repeatedly, and when ST goes LOW (VSS), playback stops. Tunes are selected by the input serial data on pins SI and

SC. The final 4 bits form the valid selection data, and this data is retained even after playback.

If serial data is input during playback, the SM1124 ignores this data and playback continues.

* Pin SC should be LOW when either a LOW-to-HIGH or HIGH-to-LOW transition occurs on pin ST.

Serial data selection¹

B3	B2	B1	B0	ST	Music selection
L	L	L	L	L → H	1st tune
L	L	L	H	L → H	2nd tune
L	L	H	L	L → H	3rd tune
L	L	H	H	L → H	4th tune
L	H	L	L	L → H	5th tune
L	H	L	H	L → H	6th tune
L	H	H	L	L → H	7th tune
L	H	H	H	L → H	8th tune

B3	B2	B1	B0	ST	Music selection
H	L	L	L	L → H	9th tune
H	L	L	H	L → H	10th tune
H	L	H	L	L → H	11th tune
H	L	H	H	L → H	12th tune
H	H	L	L	L → H	13th tune
H	H	L	H	L → H	14th tune
H	H	H	L	L → H	15th tune
H	H	H	H	L → H	16th tune

1. H = VDD level, L = VSS level

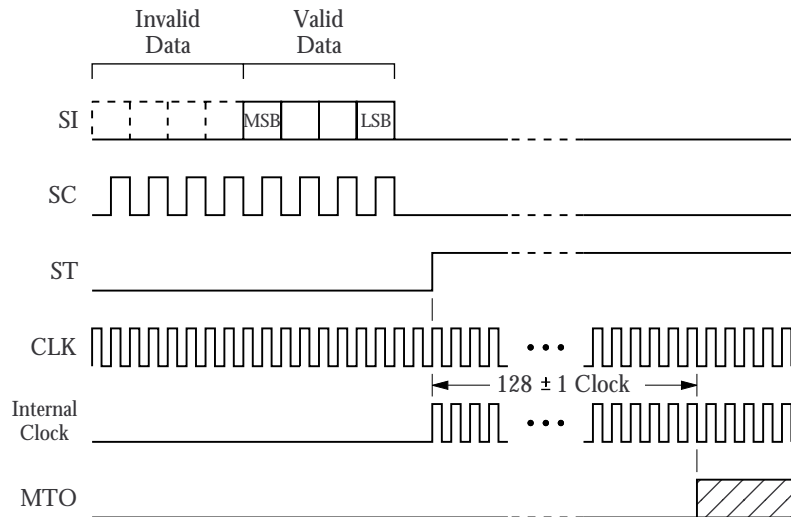

*: Tune plays repeatedly when ST is HIGH, and stops immediately when ST goes LOW.

Playback timing diagrams

Playback start

Playback starts 128 ± 1 SCK clock cycles after ST goes HIGH.

Playback stop

Playback stops immediately when ST goes LOW. The IC internal clock also stops, regardless of whether or not there is a clock input signal on pin CLK.

Musical Specifications

Maximum program steps

The mask for the built-in ROM can be programmed with up to a maximum of 512 steps, where each step represents either a note (sound pitch and length) or a rest.

Note length (including rests)

Eight rhythm values for notes (rests) can be programmed. Also, 2 or more notes can be programmed as tied notes using a tie.

	0	1	2	3	4	5	6	7
Note								
Rest								

Pitch and scale

The SM1124 performs uniform interval length processing to reduce the error at high pitches. This maintains the relative phase when the frequency varies from the input value.

The pitch varies with the external reference clock frequency, as shown in the frequency on the following page.

The frequency variation from the input frequency is the sum of the relative error, shown in the frequency table, plus the pitch error.

(Ex) 38.4 kHz system, A4 note

Relative error: 8.99 cent

Pitch error: -3.58 cent

Total: +5.41 cent

Error calculation method:

$$\begin{aligned}
 1200 \times \log_2 \frac{\text{Output frequency}}{\text{Reference frequency}} &= 1200 \times \frac{\log_{10} \frac{\text{Output frequency}}{\text{Reference frequency}}}{\log_{10} 2} \\
 &\approx 3986.3 \times \log_{10} \frac{\text{Output frequency}}{\text{Reference frequency}} \\
 &\approx 3986.3 \times \log_{10} \frac{441.379}{440.000} \\
 &\approx 5.41 \text{ cent}
 \end{aligned}$$

1F	32			40.0		45.8		46.9	Largo

Quarter note (♩) length = $1536 \times \text{tempo counter frequency divider} \div \text{CLK frequency}$

(Ex) Tempo code = 1F (divider = 32), CLK frequency = 32.768 kHz

$1536 \times 32 \div 32768 = 1.5$ (seconds)

TYPICAL APPLICATION

Speaker drive with switching circuit

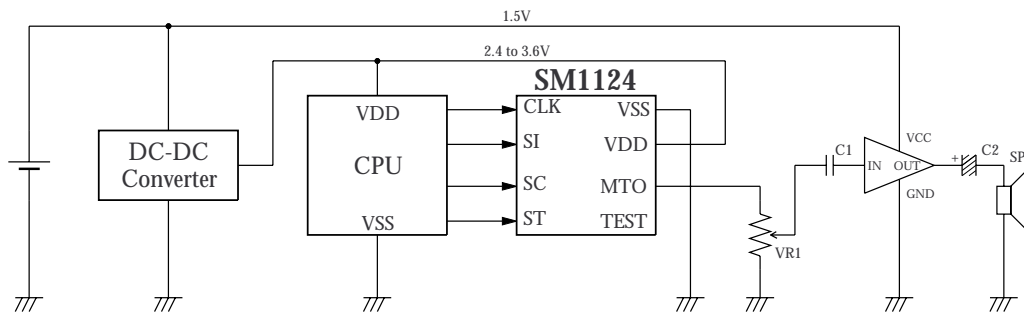

For example

Q1: hfe 100 MIN SP: Impedance 16Ω MIN

R1: 1.2kΩ

R2, R3: to be decided by sound volume

Speaker drive with Linear amplifier

For example

VR1: 10kΩ MIN

(As the output impedance of MTO terminal is up to 1kΩ MAX, the value above is given under the condition that output shall be over 90% of supply voltage amplitude. If it is set below 10kΩ, output amplitude becomes smaller.)

C1: to be decided by Input impedance of amplifier.

C2, SP: to be decided by Output impedance of amplifier.
