- Validated Ada Compiler
- 64-Word × 32-Bit Instruction Cache
- 32-Bit Instruction and Data Words, 24-Bit Addresses
- 40/32-Bit Floating-Point/Integer Multiplier and Arithmetic Logic Unit (ALU)
- Parallel ALU and Multiplier Execution in a Single Cycle
- On-Chip Direct Memory Access (DMA) Controller for Concurrent I/O and CPU Operation
- Integer, Floating-Point, and Logical Operations
- One 4K-Word × 32-Bit Single-Cycle Dual-Access On-Chip ROM Block
- Two 32-Bit External Ports (24- and 13-Bit Address)
- Two Serial Ports With Support for 8-/16-/24-/32-Bit Transfers
- Packaging
  - 181-Pin Grid Array Ceramic Package (GB Suffix)
  - 196-Pin Ceramic Quad Flatpack With Nonconductive Tie-Bar (HFG Suffix)
- SMD Approval for 40- and 50-MHz Versions
- Two Address Generators With Eight Auxiliary Registers and Two Auxiliary Register Arithmetic Units (ARAUs)
- Zero-Overhead Loops With Single-Cycle Branches
- Interlocked Instructions for Multiprocessing Support
- 32-Bit Barrel Shifter
- Eight Extended-Precision Registers (Accumulators)
- Two- and Three-Operand Instructions
- Conditional Calls and Returns
- Block Repeat Capability
- Fabricated Using Enhanced Performance Implanted CMOS (EPIC™) by Texas Instruments
- Two 32-Bit Timers

## description

The SMJ320C30 internal busing and special digital signal processor (DSP) instruction set has the speed and flexibility to execute up to 50 MFLOPS. The SMJ320C30 device optimizes speed by implementing functions in hardware that other processors implement through software or microcode. This hardware-intensive approach provides performance previously unavailable on a single chip. The emphasis on total system cost has resulted in a less expensive processor that can be designed into systems currently using costly bit-slice processors.

- SMJ320C30-40: 50-ns single-cycle execution time, 5% supply
- SMJ320C30-50: 40-ns single-cycle execution time, 5% supply

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

EPIC is a trademark of Texas Instruments Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

POST OFFICE BOX 1443 • HOUSTON, TEXAS 77251-1443

## description (continued)

181-Pin GB Grid Array Package  
(BOTTOM VIEW)

196-Pin HFG Quad Flatpack  
(TOP VIEW)

The SMJ320C30 can perform parallel multiply and ALU operations on integer or floating-point data in a single cycle. Each processor also possesses a general-purpose register file, a program cache, dedicated ARAUs, internal dual-access memories, one DMA channel supporting concurrent I/O, and a short machine-cycle time. High performance and ease of use are results of these features.

General-purpose applications are enhanced by the large address space, multiprocessor interface, internally and externally generated wait states, two external interface ports, two timers, two serial ports, and multiple interrupt structure. The SMJ320C30 supports a wide variety of system applications from host processor to dedicated coprocessor.

High-level language support is implemented easily through a register-based architecture, large address space, powerful addressing modes, flexible instruction set, and well-supported floating-point arithmetic.

For additional information when designing for cold temperature operation, please see Texas Instruments application report *320C3x, 320C4x and 320MCM42x Power-up Sensitivity at Cold Temperature*, literature number SGUA001.

## pin functions

This section gives signal descriptions for the SMJ320C30 devices in the microprocessor mode. The following tables list each signal, the number of pins, type of operating mode(s) (that is, input, output, or high-impedance state as indicated by I, O, or Z, respectively), and a brief function description. All pins labeled NC have special functions and should not be connected by the user. A line over a signal name (for example,  $\overline{\text{RESET}}$ ) indicates that the signal is active low (true at logic-0 level). The signals are grouped according to functions.

### Pin Functions

PIN NAME	QTY <sup>‡</sup>	TYPE <sup>†</sup>	DESCRIPTION	CONDITIONS WHEN SIGNAL IS Z TYPE <sup>§</sup>
<b>PRIMARY BUS INTERFACE</b>				
D31-D0	32	I/O/Z	32-bit data port of the primary bus interface	S H
A23-A0	24	O/Z	24-bit address port of the primary bus interface	S H R
R/ $\overline{\text{W}}$	1	O/Z	Read/write for primary bus interface. R/ $\overline{\text{W}}$ is high when a read is performed and low when a write is performed over the parallel interface.	S H R
$\overline{\text{STRB}}$	1	O/Z	External access strobe for the primary bus interface	S H
$\overline{\text{RDY}}$	1	I	Ready. $\overline{\text{RDY}}$ indicates that the external device is prepared for a primary bus interface transaction to complete.	
$\overline{\text{HOLD}}$	1	I	Hold for primary bus interface. When $\overline{\text{HOLD}}$ is a logic low, any ongoing transaction is completed. A23-A0, D31-D0, $\overline{\text{STRB}}$ , and R/ $\overline{\text{W}}$ are in the high-impedance state and all transactions over the primary bus interface are held until $\overline{\text{HOLD}}$ becomes a logic high or the NOHOLD bit of the primary bus control register is set.	
$\overline{\text{HOLDA}}$	1	O/Z	Hold acknowledge for primary bus interface. $\overline{\text{HOLDA}}$ is generated in response to a logic low on $\overline{\text{HOLD}}$ . $\overline{\text{HOLDA}}$ indicates that A23-A0, D31-D0, $\overline{\text{STRB}}$ , and R/ $\overline{\text{W}}$ are in the high-impedance state and that all transactions over the bus are held. $\overline{\text{HOLDA}}$ is high in response to a logic high of $\overline{\text{HOLD}}$ or when the NOHOLD bit of the primary bus control register is set.	S
<b>EXPANSION BUS INTERFACE</b>				
XD31-XD0	32	I/O/Z	32-bit data port of the expansion bus interface	S R
XA12-XA0	13	O/Z	13-bit address port of the expansion bus interface	S R
XR/ $\overline{\text{W}}$	1	O/Z	Read/write signal for expansion bus interface. When a read is performed, XR/ $\overline{\text{W}}$ is held high; when a write is performed, XR/ $\overline{\text{W}}$ is low.	S R
$\overline{\text{MSTRB}}$	1	O/Z	External memory access strobe for the expansion bus interface	S
$\overline{\text{IOSTRB}}$	1	O/Z	External I/O access strobe for the expansion bus interface	S
XRDY	1	I	Ready signal. XRDY indicates that the external device is prepared for an expansion bus interface transaction to complete.	
<b>CONTROL SIGNALS</b>				
$\overline{\text{RESET}}$	1	I	Reset. When $\overline{\text{RESET}}$ is a logic low, the device is in the reset condition. When $\overline{\text{RESET}}$ becomes a logic high, execution begins from the location specified by the reset vector.	
INT3-INT0	4	I	External interrupts	
$\overline{\text{IACK}}$	1	O/Z	Interrupt acknowledge. $\overline{\text{IACK}}$ is set to a logic high by the IACK instruction. $\overline{\text{IACK}}$ can be used to indicate the beginning or end of an interrupt-service routine.	S
MC/ $\overline{\text{MP}}$	1	I	Microcomputer/microprocessor mode	
XF1, XF0	2	I/O/Z	External flags. XF1 and XF0 are used as general-purpose I/Os or to support interlocked processor instructions.	S R

<sup>†</sup> I = input, O = output, Z = high-impedance state, NC = no connect

<sup>‡</sup> For GB package

<sup>§</sup> S =  $\overline{\text{SHZ}}$  active, H =  $\overline{\text{HOLD}}$  active, R =  $\overline{\text{RESET}}$  active

# SMJ320C30 DIGITAL SIGNAL PROCESSOR

SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## Pin Functions (Continued)

PIN NAME	QTY‡	TYPE†	DESCRIPTION	CONDITIONS WHEN SIGNAL IS Z TYPE§	
<b>SERIAL PORT 0 SIGNALS</b>					
CLKX0	1	I/O/Z	Serial port 0 transmit clock. CLKX0 is the serial-shift clock for the serial port 0 transmitter.	S	R
DX0	1	I/O/Z	Data transmit output. Serial port 0 transmits serial data on DX0.	S	R
FSX0	1	I/O/Z	Frame synchronization pulse for transmit. The FSX0 pulse initiates the transmit-data process over DX0.	S	R
CLKR0	1	I/O/Z	Serial port 0 receive clock. CLKR0 is the serial-shift clock for the serial port 0 receiver.	S	R
DR0	1	I/O/Z	Data receive. Serial port 0 receives serial data on DR0.	S	R
FSR0	1	I/O/Z	Frame synchronization pulse for receive. The FSR0 pulse initiates the receive-data process over DR0.	S	R
<b>SERIAL PORT 1 SIGNALS</b>					
CLKX1	1	I/O/Z	Serial port 1 transmit clock. CLKX1 is the serial-shift clock for the serial port 1 transmitter.	S	R
DX1	1	I/O/Z	Data transmit output. Serial port 1 transmits serial data on DX1.	S	R
FSX1	1	I/O/Z	Frame synchronization pulse for transmit. The FSX1 pulse initiates the transmit-data process over DX1.	S	R
CLKR1	1	I/O/Z	Serial port 1 receive clock. CLKR1 is the serial-shift clock for the serial port 1 receiver.	S	R
DR1	1	I/O/Z	Data receive. Serial port 1 receives serial data on DR1.	S	R
FSR1	1	I/O/Z	Frame synchronization pulse for receive. The FSR1 pulse initiates the receive-data process over DR1.	S	R
<b>TIMER 0 SIGNALS</b>					
TCLK0	1	I/O/Z	Timer clock 0. As an input, TCLK0 is used by timer 0 to count external pulses. As an output, TCLK0 outputs pulses generated by timer 0.	S	R
<b>TIMER 1 SIGNALS</b>					
TCLK1	1	I/O/Z	Timer clock 1. As an input, TCLK1 is used by timer 1 to count external pulses. As an output, TCLK1 outputs pulses generated by timer 1.	S	R
<b>SUPPLY AND OSCILLATOR SIGNALS (see Note 1)</b>					
V <sub>DD</sub>	4	I	5-V supply <sup>¶</sup>		
IODV <sub>DD</sub>	2	I	5-V supply <sup>¶</sup>		
ADV <sub>DD</sub>	2	I	5-V supply <sup>¶</sup>		
PDV <sub>DD</sub>	1	I	5-V supply <sup>¶</sup>		
DDV <sub>DD</sub>	2	I	5-V supply <sup>¶</sup>		
MDV <sub>DD</sub>	1	I	5-V supply <sup>¶</sup>		
V <sub>SS</sub>	4	I	Ground		
DV <sub>SS</sub>	4	I	Ground		
CV <sub>SS</sub>	2	I	Ground		

† I = input, O = output, Z = high-impedance state, NC = no connect

‡ For GB package

§ S =  $\overline{\text{SHZ}}$  active, H =  $\overline{\text{HOLD}}$  active, R =  $\overline{\text{RESET}}$  active

¶ Recommended decoupling capacitor is 0.1  $\mu\text{F}$ .

NOTE 1: CV<sub>SS</sub>, V<sub>SS</sub>, and IV<sub>SS</sub> are on the same plane.

**Pin Functions (Continued)**

PIN NAME	QTY <sup>‡</sup>	TYPE <sup>†</sup>	DESCRIPTION	CONDITIONS WHEN SIGNAL IS Z TYPE <sup>§</sup>
<b>SUPPLY AND OSCILLATOR SIGNALS (see Note 1) (CONTINUED)</b>				
IV <sub>SS</sub>	1	I	Ground	
V <sub>BBP</sub>	1	NC	V <sub>BB</sub> pump oscillator output	
V <sub>SUBS</sub>	1	I	Substrate pin. Tie to ground	
X1	1	O	Output from the internal oscillator for the crystal. If a crystal is not used, X1 must be left unconnected.	
X2/CLKIN	1	I	Input to the internal oscillator from the crystal or a clock	
H1	1	O/Z	External H1 clock. H1 has a period equal to twice CLKIN.	S
H3	1	O/Z	External H3 clock. H3 has a period equal to twice CLKIN.	S
<b>RESERVED (see Note 2)</b>				
EMU0-EMU2	3	I	Reserved. Use pullup resistors to 5 V	
EMU3	1	O/Z	Reserved	S
EMU4/ $\overline{\text{SHZ}}$	1	I	Shutdown high impedance. When active, EMU4/ $\overline{\text{SHZ}}$ shuts down the SMJ320C30 and places all pins in the high-impedance state. EMU4/ $\overline{\text{SHZ}}$ is used for board-level testing to ensure that no dual-drive conditions occur. <b>CAUTION:</b> A low on $\overline{\text{SHZ}}$ corrupts SMJ320C30 memory and register contents. Reset the device with $\overline{\text{SHZ}}$ high to restore it to a known operating condition.	
EMU5, EMU6	2	NC	Reserved	
RSV0-RSV4	5	I	Reserved. Tie pins directly to 5 V	
RSV5-RSV10	6	I/O	Reserved. Use pullups on each pin to 5 V	
Locator	1	NC	Reserved	

<sup>†</sup> I = input, O = output, Z = high-impedance state, NC=No Connect

<sup>‡</sup> For GB package

<sup>§</sup> S =  $\overline{\text{SHZ}}$  active, H = HOLD active, R = RESET active

NOTES: 1. CV<sub>SS</sub>, V<sub>SS</sub>, IV<sub>SS</sub> are on the same plane.

2. The connections specified for the reserved pins must be followed. For best results, 18-k $\Omega$ -22-k $\Omega$  pullup resistors are recommended. All 5-V supply pins must be connected to a common supply plane, and all ground pins must be connected to a common ground plane.

<sup>¶</sup> DV<sub>SS</sub> is on a common plane internal to the device.

**absolute maximum ratings over operating case temperature range (unless otherwise noted)<sup>†</sup>**

Supply voltage range, $V_{CC}$ (see Note 3) .....	-0.3 V to 7 V
Input voltage range, $V_I$ .....	- 0.3 V to 7 V
Output voltage range, $V_O$ .....	-0.3 V to 7 V
Continuous power dissipation (see Note 4) .....	3.15 W
Operating case temperature range, $T_C$ .....	- 55°C to 125°C
Storage temperature range, $T_{stg}$ .....	- 65°C to 150°C

<sup>†</sup> Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 3. All voltage values are with respect to  $V_{SS}$ .

4. Actual operating power is less. This value was obtained under specially produced worst-case test conditions, which are not sustained during normal device operation. These conditions consist of continuous parallel writes of a checkerboard pattern to both primary and extension buses at the maximum rate possible. See normal ( $I_{CC}$ ) current specification in the electrical characteristics table and also read *Calculation of TMS320C30 Power Dissipation Application Report* (literature number SPRA020).

**recommended operating conditions (see Note 5)**

	MIN	NOM <sup>‡</sup>	MAX	UNIT
$V_{DD}$ Supply voltage ( $AV_{DD}$ , etc.)	4.75	5	5.25	V
$V_{SS}$ Supply voltage ( $CV_{SS}$ , etc.)		0		V
$V_{IH}$ High-level input voltage	2.1		$V_{DD} + 0.3^*$	V
$V_{TH}$ High-level input voltage for CLKIN	3		$V_{DD} + 0.3^*$	V
$V_{IL}$ Low-level input voltage	- 0.3 <sup>*</sup>		0.8	V
$I_{OH}$ High-level output current			- 300	$\mu$ A
$I_{OL}$ Low-level output current			2	mA
$T_C$ Operating case temperature (see Note 6)	- 55		125	°C

<sup>‡</sup> All nominal values are at  $V_{DD} = 5$  V,  $T_A$  (ambient-air temperature)= 25°C.

\* This parameter is not production tested.

NOTE 5: All input and output voltage levels are TTL compatible.

NOTE 6:  $T_C$  MAX at maximum rated operating conditions at any point on the case,  $T_C$  MIN at initial (time zero) power up

# SMJ320C30 DIGITAL SIGNAL PROCESSOR

SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

**electrical characteristics over recommended ranges of supply voltage (unless otherwise noted)  
(see Note 5)**

PARAMETER		TEST CONDITIONS <sup>†</sup>	MIN	TYP <sup>‡</sup>	MAX	UNIT
V <sub>OH</sub>	High-level output voltage	V <sub>DD</sub> = MIN, I <sub>OH</sub> = MAX	2.4	3		V
V <sub>OL</sub>	Low-level output voltage	For XA12-XA0			0.6*	V
		All others	V <sub>DD</sub> = MIN, I <sub>OL</sub> = MAX		0.3	0.6
I <sub>Z</sub>	High-impedance current	V <sub>DD</sub> = MAX			± 20	μA
I <sub>I</sub>	Input current	V <sub>I</sub> = V <sub>SS</sub> to V <sub>DD</sub>			± 10	μA
I <sub>IP</sub>	Input current	Inputs with internal pullups (see Note 7)	- 600		20	μA
I <sub>IC</sub>	Input current (X2/CLKIN)	V <sub>I</sub> = V <sub>SS</sub> to V <sub>DD</sub>			± 50	μA
I <sub>CC</sub>	Supply current	V <sub>DD</sub> = MAX, T <sub>A</sub> = 25°C, t <sub>c(CL)</sub> = MIN, See Note 8		200	600	mA
I <sub>DD</sub>	Supply current, standby; IDLE2, clock shut off	V <sub>DD</sub> = 5 V, T <sub>A</sub> = 25°C		50		mA
C <sub>i</sub>	Input capacitance				15*	pF
C <sub>o</sub>	Output capacitance				20*	pF
C <sub>x</sub>	X2/CLKIN capacitance				25*	pF

<sup>†</sup> For conditions shown as MIN/MAX, use the appropriate value specified in recommended operating conditions.

<sup>‡</sup> All typical values are at V<sub>DD</sub> = 5 V, T<sub>A</sub> = 25°C.

\* This parameter is not production tested.

NOTES: 5. All input and output voltage levels are TTL compatible.

7. Pins with internal pullup devices: INT0-INT3, MC/MP, RSV0-RSV10. Although RSV0-RSV10 have internal pullup devices, external pullups should be used on each pin as identified in the pin function tables.

8. Actual operating current is less than this maximum value. This value was obtained under specially produced worst-case test conditions, which are not sustained during normal device operation. These conditions consist of continuous parallel writes of a checkerboard pattern to both primary and expansion buses at the maximum rate possible. See *Calculation of TMS320C30 Power Dissipation Application Report* (literature number SPRA020).

## PARAMETER MEASUREMENT INFORMATION

Where: I<sub>OL</sub> = 2 mA (all outputs)  
 I<sub>OH</sub> = 300 μA (all outputs)  
 V<sub>LOAD</sub> = Selected to emulate 50 Ω termination (typical value = 1.54 V).  
 C<sub>T</sub> = 80-pF typical load-circuit capacitance

**Figure 4. Test Load Circuit**

---

PARAMETER MEASUREMENT INFORMATION (CONTINUED)

**signal transition levels**

TTL-level outputs are driven to a minimum logic-high level of 2.4 V and to a maximum logic-low level of 0.6 V. Output transition times are specified as follows:

- For a high-to-low transition on a TTL-compatible output signal, the level at which the output is said to be no longer high is 2 V and the level at which the output is said to be low is 1 V.
- For a low-to-high transition, the level at which the output is said to be no longer low is 1 V and the level at which the output is said to be high is 2 V.

**Figure 5. TTL-Level Outputs**

Transition times for TTL-compatible inputs are specified as follows:

- For a high-to-low transition on an input signal, the level at which the input is said to be no longer high is 2.1 V and the level at which the input is said to be low is 0.8 V.
- For a low-to-high transition on an input signal, the level at which the input is said to be no longer low is 0.8 V and the level at which the input is said to be high is 2.1 V.

**Figure 6. TTL-Level Inputs**

## PARAMETER MEASUREMENT INFORMATION (CONTINUED)

### timing parameter symbology

Timing parameter symbols used herein were created in accordance with JEDEC Standard 100-A. To shorten the symbols, some of the terminal names and other related terminology have been abbreviated as follows, unless otherwise noted:

A	A23-A0	IACK	$\overline{\text{TACK}}$
ASYNCH	Asynchronous reset signals include XF0, XF1, CLKX0, DX0, FSX0, CLKR0, DR0, FSR0, CLKX1, DX1, FSX1, CLKR1, DR1, FSR1, TCLK0, and TCLK1	INT	$\overline{\text{INT3-INT0}}$
CH	CLKX includes CLKX0 and CLKX1	IOS	$\overline{\text{IOSTRB}}$
CI	CLKIN	(M)S	$\overline{\text{(M)STRB}}$ includes $\overline{\text{MSTRB}}$ and $\overline{\text{STRB}}$
CONTROL	Control signals include $\overline{\text{STRB}}$ , $\overline{\text{MSTRB}}$ , and $\overline{\text{IOSTRB}}$	RDY	$\overline{\text{RDY}}$
D	D31-D0	RESET	$\overline{\text{RESET}}$
DR	Includes DR0, DR1	RW	$\text{R}/\overline{\text{W}}$
DX	Includes DX0, DX1	S	$\overline{\text{STRB}}$
FS	FSX/R includes FSX0, FSX1, FSR0, and FSR1	SCK	CLKX/R includes CLKX0, CLKX1, CLKR0, and CLKR1
FSR	Includes FSR0, FSR1	TCLK	TCLK0, TCLK1
FSX	Includes FSX0, FSX1	(X)A	Includes A23-A0 and XA12-XA0
GPIO	General-purpose input/output; peripheral pins include CLKX0/1, CLKR0/1, DX0/1, DR0/1, FSX0/1, FSR0/1, and TCLK0/1	(X)D	Includes D31-D0 and XD31-XD0
H	Includes H1, H3	XF	XFx includes XF0 and XF1
H1	H1	XF0	XF0
H3	H3	XF1	XF1
HOLD	$\overline{\text{HOLD}}$	(X)RDY	Includes $\overline{\text{RDY}}$ and $\overline{\text{XRDY}}$
HOLDA	$\overline{\text{HOLDA}}$	(X)RW	(X) $\text{R}/\overline{\text{W}}$ includes $\text{R}/\overline{\text{W}}$ and $\text{XR}/\overline{\text{W}}$

### X2/CLKIN, H1, and H3 timing

The following table defines the timing parameters for the X2/CLKIN, H1, and H3 interface signals. See the RESET timing in Figure 20 for CLKIN to H1 and H3 delay specification.

#### timing parameters for X2/CLKIN, H1, H3 (see Note 5, Figure 7, Figure 8, and Figure 9)

NO.†		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
1	$t_{f(CI)}$ Fall time, CLKIN		5*		5*	ns
2	$t_{w(CL)}$ Pulse duration, CLKIN low, $t_{c(CL)} = \text{MIN}$ (see Note 9)	9		7		ns
3	$t_{w(CIH)}$ Pulse duration, CLKIN high, $t_{c(CL)} = \text{MIN}$ (see Note 9)	9		7		ns
4	$t_{r(CI)}$ Rise time, CLKIN		5*		5*	ns
5	$t_{c(CL)}$ Cycle time, CLKIN	25	303	20	303	ns
6	$t_{f(H)}$ Fall time, H1/H3		3		3	ns
7	$t_{w(HL)}$ Pulse duration, H1/H3 low (see Note 10)	P - 5		P - 5		ns
8	$t_{w(HH)}$ Pulse duration, H1/H3 high (see Note 10)	P - 6		P - 6		ns
9	$t_{r(H)}$ Rise time, H1/H3		3		3	ns
9.1	$t_{d(HL-HH)}$ Delay time, from H1 low to H3 high or from H3 low to H1 high	0	4	0	4	ns
10	$t_{c(H)}$ Cycle time, H1/H3	50	606	40	606	ns

† Numbers in this column match those used in Figure 7, Figure 8, and Figure 9.

\* This parameter is not production tested.

NOTES: 5. All input and output voltage levels are TTL compatible.

9. Rise and fall times, assuming a 35 - 65% duty cycle, are incorporated within this specification (see Figure 6).

10.  $P = t_{c(CL)}$

# SMJ320C30 DIGITAL SIGNAL PROCESSOR

SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## reset timing

$\overline{\text{RESET}}$  is an asynchronous input that can be asserted at any time during a clock cycle. If the specified timings are met, the exact sequence shown in Figure 20 occurs; otherwise, an additional delay of one clock cycle can occur.  $\overline{\text{R/W}}$  and  $\overline{\text{XR/W}}$  are in the high-impedance state during reset and can be provided with a resistive pullup, nominally 18 k $\Omega$  to 22 k $\Omega$ , to prevent spurious writes from occurring. The asynchronous reset signals include  $\overline{\text{XF0/1}}$ ,  $\overline{\text{CLKX0/1}}$ ,  $\overline{\text{DX0/1}}$ ,  $\overline{\text{FSX0/1}}$ ,  $\overline{\text{CLKR0/1}}$ ,  $\overline{\text{DR0/1}}$ ,  $\overline{\text{FSR0/1}}$ , and  $\overline{\text{TCLK0/1}}$ .  $\overline{\text{HOLD}}$  is an asynchronous input and can be asserted during reset.

Resetting the device initializes the primary- and expansion-bus control registers to seven software wait states and, therefore, results in slow external accesses until these registers are initialized.

## timing parameters for $\overline{\text{RESET}}$ [ $P = t_{c(CI)}$ ] (see Figure 9 and Figure 20)

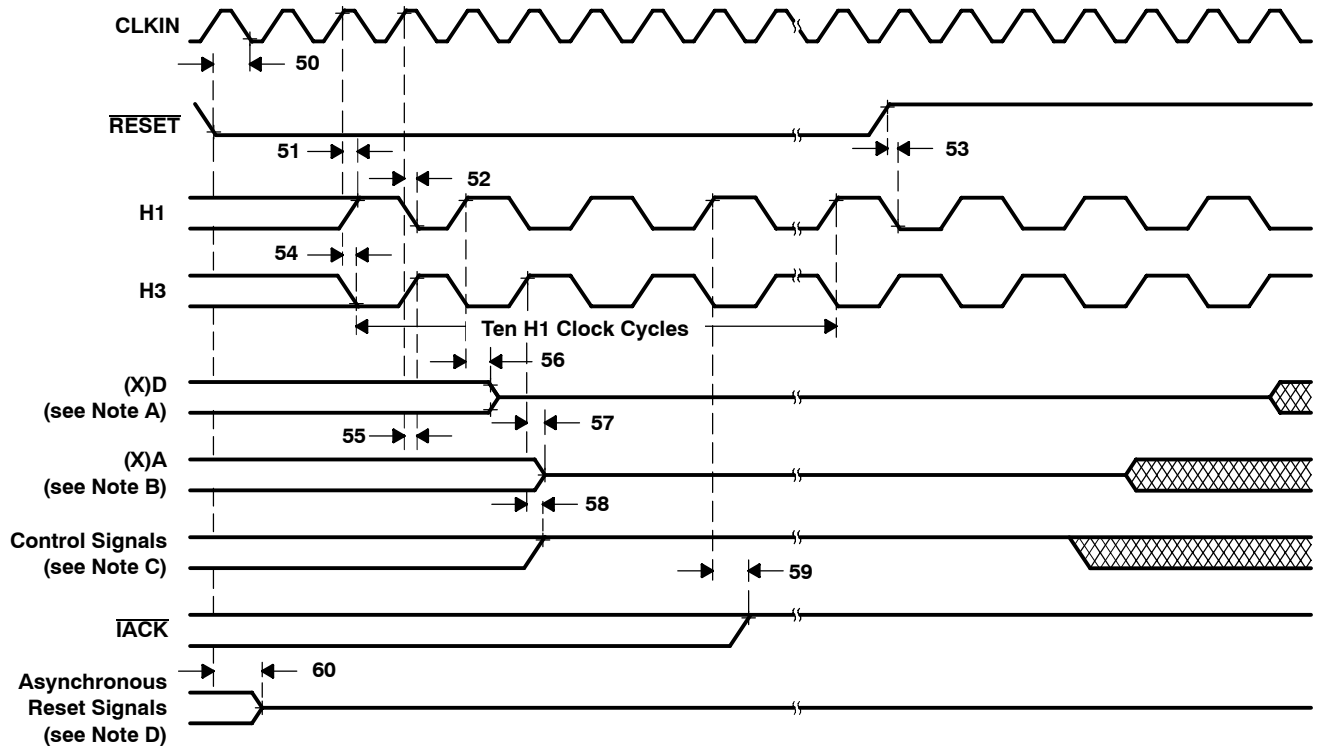

NO.		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
50	$t_{su}(\overline{\text{RESET}})$ Setup time, $\overline{\text{RESET}}$ before CLKIN low	10	P*	10	P*	ns
51	$t_d(\text{CLKINH-H1H})$ Delay time, CLKIN high to H1 high <sup>†</sup>	2	14	2	10	ns
52	$t_d(\text{CLKINH-H1L})$ Delay time, CLKIN high to H1 low <sup>†</sup>	2	14	2	10	ns
53	$t_{su}(\overline{\text{RESETH-H1L}})$ Setup time, $\overline{\text{RESET}}$ high before H1 low after ten H1 clock cycles	9		7		ns
54	$t_d(\text{CLKINH-H3L})$ Delay time, CLKIN high to H3 low <sup>†</sup>	2	14	2	10	ns
55	$t_d(\text{CLKINH-H3H})$ Delay time, CLKIN high to H3 high <sup>†</sup>	2	14	2	10	ns
56	$t_{dis}(\text{H1H-XD})$ Disable time, H1 high to (X)D high-impedance state		15*		12*	ns
57	$t_{dis}(\text{H3H-XA})$ Disable time, H3 high to (X)A high-impedance state		9*		8*	ns
58	$t_d(\text{H3H-CONTROLH})$ Delay time, H3 high to control signals high		9*		8*	ns
59	$t_d(\text{H1H-IACKH})$ Delay time, H1 high to $\overline{\text{IACK}}$ high		9*		8*	ns
60	$t_{dis}(\overline{\text{RESETL-ASYNCH}})$ Disable time, $\overline{\text{RESET}}$ low to asynchronous reset signals in the high-impedance state		21*		17*	ns

<sup>†</sup> See Figure 9 for temperature dependence for the 40-MHz SMJ320C30.

\* This parameter is not production tested.

reset timing (continued)

- NOTES: A. In this diagram X(D) includes D31-D0 and XD31-XD0.  
 B. In this diagram, (X)A includes A23-A0 and XA12-XA0.  
 C. Control signals include STRB, MSTRB, and IOSTRB.  
 D. Asynchronous reset signals include XF1, XF0, CLKX0, DX0, FSX0, CLKR0, DR0, FSR0, CLKX1, DX1, FSX1, CLKR1, DR1, FSR1, TCLK0, and TCLK1.  
 E. In microprocessor mode, the reset vector is fetched twice, with seven software wait states each time. In microcomputer mode, the reset vector is fetched twice, with no software wait states.

Figure 20. Timing for  $\overline{\text{Reset}}$  [ $P=t_{c(c)}$ ]

# SMJ320C30 DIGITAL SIGNAL PROCESSOR

SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## interrupt-response timing

The following table defines the timing parameters for the  $\overline{\text{INT}}$  signals.

### timing parameters for $\overline{\text{INT3}}-\overline{\text{INT0}}$ [ $Q = t_{c(H)}$ ] (see Figure 21)

NO.		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
61	$t_{su(\text{INT})}$ Setup time, $\overline{\text{INT3}}-\overline{\text{INT0}}$ before H1 low	13		10		ns
62	$t_w(\text{INT})$ Pulse duration, $\overline{\text{INT3}}-\overline{\text{INT0}}$ , to assure only one interrupt seen	Q	< 2Q*	Q	< 2Q*	ns

\* This parameter is not production tested.

The interrupt ( $\overline{\text{INT}}$ ) pins are asynchronous inputs that can be asserted at any time during a clock cycle. The SMJ320C30 interrupts are level-sensitive, not edge-sensitive. Interrupts are detected on the falling edge of H1. Therefore, interrupts must be set up and held to the falling edge of H1 for proper detection. The CPU and DMA respond to detected interrupts on instruction-fetch boundaries only.

For the processor to recognize only one interrupt on a given input, an interrupt pulse must be set up and held to:

- A minimum of one H1 falling edge
- No more than two H1 falling edges

The SMJ320C30 can accept an interrupt from the same source every two H1 clock cycles.

If the specified timings are met, the exact sequence shown in Figure 21 occurs; otherwise, an additional delay of one clock cycle is possible.

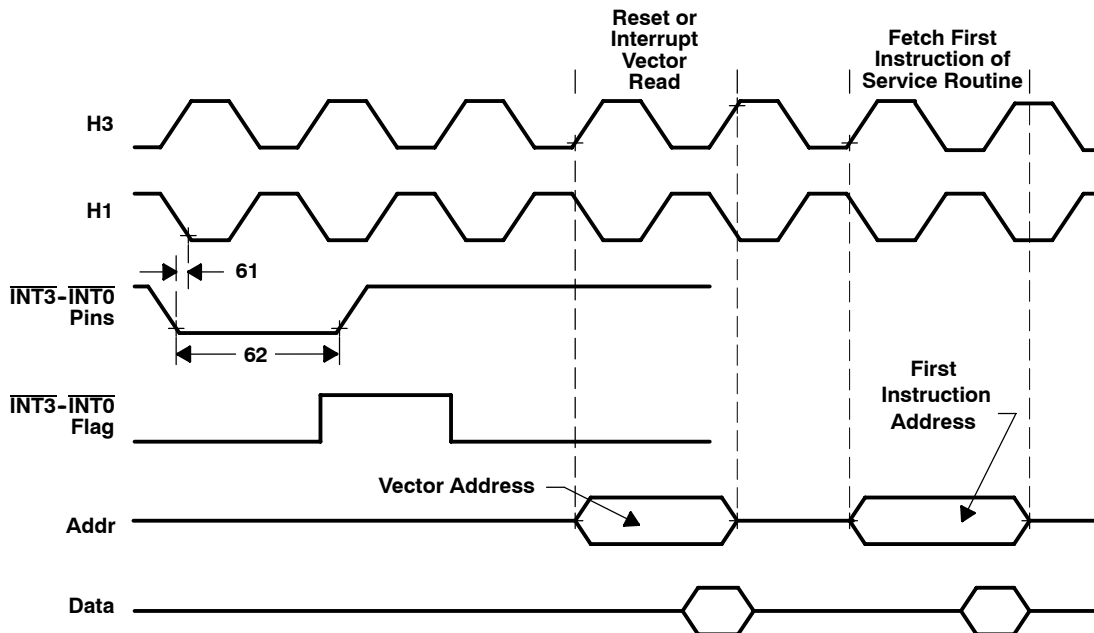

Figure 21. Timing for  $\overline{\text{INT3}}-\overline{\text{INT0}}$  Response [ $Q=t_{c(H)}$ ]

### interrupt-acknowledge timing

The  $\overline{\text{IACK}}$  output goes active on the first half-cycle (H1 rising) of the decode phase of the IACK instruction and goes inactive at the first half-cycle (H1 rising) of the read phase of the IACK instruction.

The following table defines the timing parameters for the  $\overline{\text{IACK}}$  signal.

### timing parameters for $\overline{\text{IACK}}$ (see Figure 22)

NO.†		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
63	$t_{d(H1H-IACKL)}$ Delay time, H1 high to $\overline{\text{IACK}}$ low		9	7		ns
64	$t_{d(H1H-IACKH)}$ Delay time, H1 high to $\overline{\text{IACK}}$ high	9		7		ns

† Numbers in this column match those used in Figure 22.

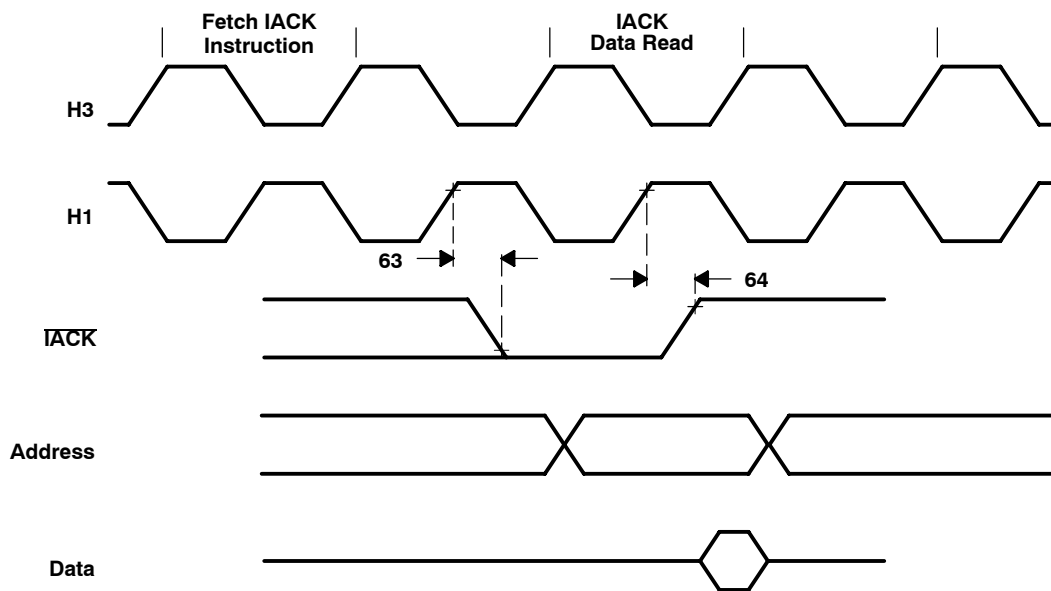

Figure 22. Timing for Interrupt-Acknowledge ( $\overline{\text{IACK}}$ )

SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## serial-port timing parameters (see Figure 23 and Figure 24)

NO.		CLOCK SOURCE	320C30-40		320C30-50		UNIT
			MIN	MAX	MIN	MAX	
65	$t_{d(H1-SCK)}$	Delay time, H1 high to internal CLKX/R	13		10		ns
66	$t_c(SCK)$	CLKX/R ext	$t_{c(H)} \times 2.5^*$		$t_{c(H)} \times 2.6^*$		ns
		CLKX/R int	$t_{c(H)} \times 2$	$t_{c(H)} \times 2^{32^*}$	$t_{c(H)} \times 2$	$t_{c(H)} \times 2^{32^*}$	
67	$t_w(SCK)$	CLKX/R ext	$t_{c(H)} + 12^*$		$t_{c(H)} + 10^*$		ns
		CLKX/R int	$[t_c(SCK)/2] - 15$	$[t_c(SCK)/2] + 5$	$[t_c(SCK)/2] - 5$	$[t_c(SCK)/2] + 5$	
68	$t_r(SCK)$	Rise time, CLKX/R	7*		6*		ns
69	$t_f(SCK)$	Fall time, CLKX/R	7*		6*		ns
70	$t_{d(DX)}$	CLKX ext	30		24		ns
		CLKX int	17		16		
71	$t_{su(DR)}$	CLKR ext	9		9		ns
		CLKR int	21		17		
72	$t_h(DR)$	CLKR ext	9		7		ns
		CLKR int	0		0		
73	$t_{d(FSX)}$	CLKX ext	27		22		ns
		CLKX int	15		15		
74	$t_{su(FSR)}$	CLKR ext	9		7		ns
		CLKR int	9		7		
75	$t_h(FS)$	CLKX/R ext	9		7		ns
		CLKX/R int	0		0		
76	$t_{su(FSX)}$	CLKX ext	$-[t_{c(H)} - 8]$	$[t_c(SCK)/2] - 10^*$	$-[t_{c(H)} - 8]$	$[t_c(SCK)/2] - 10^*$	ns
		CLKX int	$-[t_{c(H)} - 21]$	$t_c(SCK)/2^*$	$-[t_{c(H)} - 21]$	$t_c(SCK)/2^*$	
77	$t_{d(CH-DX)V}$	CLKX ext	30		24		ns
		CLKX int	18		14		
78	$t_{d(FSX-DX)V}$	Delay time, FSX to first DX bit, CLKX precedes FSX	30		24		ns
79	$t_{dDXZ}$	Delay time, CLKX high to DX high impedance following last data bit	17*		14*		ns

\* This parameter is not production tested.

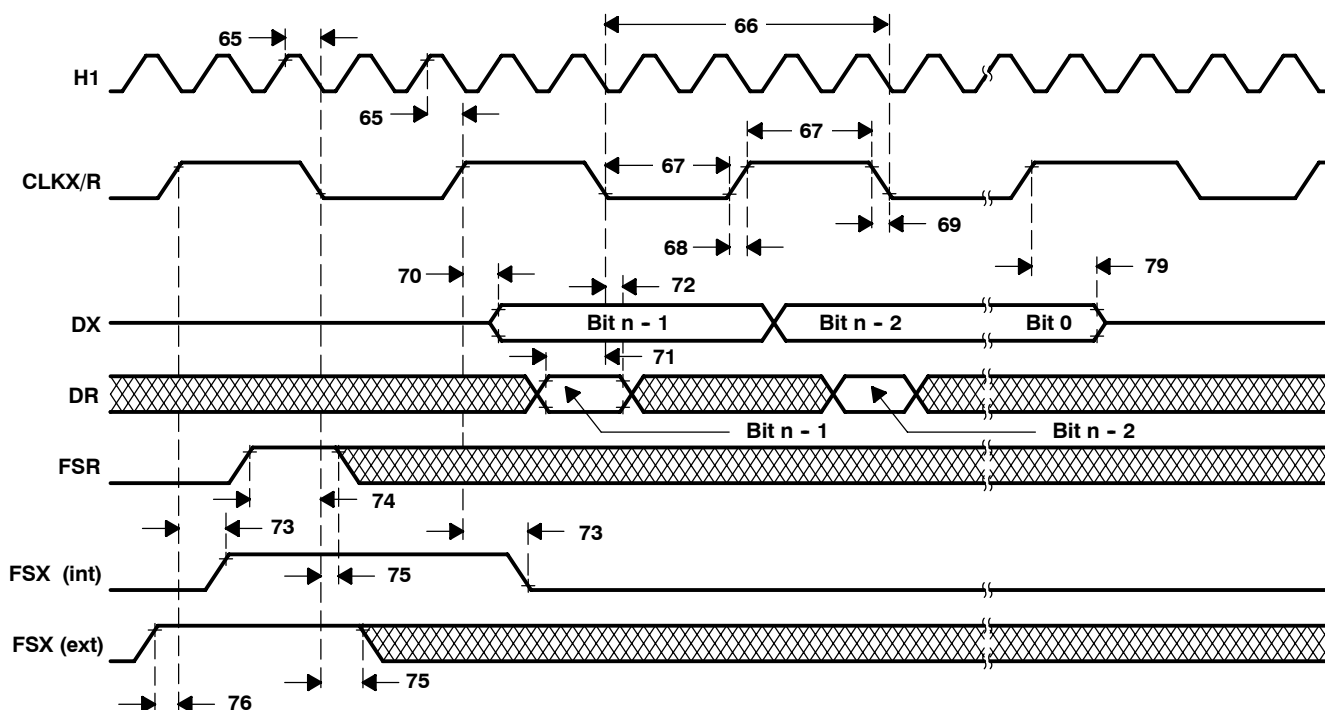

**serial-port timing parameters (continued)**

Unless otherwise indicated, the data-rate timings shown in Figure 23 and Figure 24 are valid for all serial-port modes, including handshake. See serial-port timing parameter tables.

Timing diagrams shown in Figure 23 and Figure 24 show operations with the serial port global-control register bits CLKXP = CLKRP = FSXP = FSRP = 0.

Timing diagrams shown in Figure 23 and Figure 24 depend upon the length of the serial-port word, n, where n = 8, 16, 24, or 32 bits, respectively.

**Figure 23. Serial-Port Timing for Fixed-Data-Rate Mode**

NOTE A: Timings not expressly specified for variable-data-rate mode are the same as those for fixed-data-rate mode.

**Figure 24. Serial-Port Timing for Variable-Data-Rate Mode**

SOURCED FROM: SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## HOLD timing

$\overline{\text{HOLD}}$  is an asynchronous input that can be asserted at any time during a clock cycle. If the specified timings are met, the exact sequence shown in Figure 25 occurs; otherwise, an additional delay of one clock cycle is possible.

The "timing parameters for  $\overline{\text{HOLD}}/\overline{\text{HOLDA}}$ " table defines the timing parameters for the  $\overline{\text{HOLD}}$  and  $\overline{\text{HOLDA}}$  signals.

The NOHOLD bit of the primary bus control register overrides the  $\overline{\text{HOLD}}$  signal. When this bit is set, the device comes out of hold and prevents future hold cycles.

Asserting  $\overline{\text{HOLD}}$  prevents the processor from accessing the primary bus. Program execution continues until a read from or a write to the primary bus is requested. In certain circumstances, the first write is pending, allowing the processor to continue until a second write is encountered.

## HOLD/HOLDA timing (see Figure 25)

NO.†		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
80	$t_{su}(\overline{\text{HOLD}})$ Setup time, $\overline{\text{HOLD}}$ before H1 low	13		10		ns
81	$t_v(\overline{\text{HOLDA}})$ Valid time, $\overline{\text{HOLDA}}$ after H1 low	0*	9	0*	7	ns
82	$t_w(\overline{\text{HOLD}})$ Pulse duration, $\overline{\text{HOLD}}$ low	$2t_{c(H)}$		$2t_{c(H)}$		ns
83	$t_w(\overline{\text{HOLDA}})$ Pulse duration, $\overline{\text{HOLDA}}$ low	$t_{c(H)} - 5^*$		$t_{c(H)} - 5^*$		ns
84	$t_d(\text{H1L-SH})_H$ Delay time, H1 low to $\overline{\text{STRB}}$ high for a $\overline{\text{HOLD}}$	0*	9*	0*	7*	ns
85	$t_{dis}(\text{H1L-S})$ Disable time, H1 low to $\overline{\text{STRB}}$ high impedance	0*	9*	0*	8*	ns
86	$t_{en}(\text{H1L-S})$ Enable time, H1 low to $\overline{\text{STRB}}$ active	0*	9*	0*	7*	ns
87	$t_{dis}(\text{H1L-RW})$ Disable time, H1 low to $\overline{\text{R/W}}$ high impedance	0*	9*	0*	8*	ns
88	$t_{en}(\text{H1L-RW})$ Enable time, H1 low to $\overline{\text{R/W}}$ active	0*	9*	0*	7*	ns
89	$t_{dis}(\text{H1L-A})$ Disable time, H1 low to address high impedance	0*	9*	0*	8*	ns
90	$t_{en}(\text{H1L-A})$ Enable time, H1 low to address valid	0*	13*	0*	12*	ns
91	$t_{dis}(\text{H1H-D})$ Disable time, H1 high to data high impedance	0*	12*	0*	8*	ns

† Numbers in this column are used in Figure 25.

\* This parameter is not production tested.

**HOLD/HOLDA timing (continued)**

NOTE A:  $\overline{\text{HOLDA}}$  goes low in response to  $\overline{\text{HOLD}}$  going low and continues to remain low through one H1 cycle after  $\overline{\text{HOLD}}$  returns to high.

**Figure 25. Timing for  $\overline{\text{HOLD}}/\overline{\text{HOLDA}}$**

SOURCED FROM: SGUS014H - FEBRUARY 1991 - REVISED JUNE 2004

## general-purpose I/O timing

Peripheral pins include CLKX0/1, CLKR0/1, DX0/1, DR0/1, FSX0/1, FSR0/1, and TCLK0/1. The contents of the internal-control registers associated with each peripheral define the modes for these pins.

## peripheral pin I/O timing

The following table defines peripheral pin general-purpose I/O timing parameters.

### timing parameters for peripheral pin general-purpose I/O (see Note 11 and Figure 26)

NO.†		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
92	$t_{su}(GPIOH1L)$ Setup time, general-purpose input before H1 low	10*		9*		ns
93	$t_h(GPIOH1L)$ Hold time, general-purpose input after H1 low	0*		0*		ns
94	$t_d(GPIOH1H)$ Delay time, general-purpose output after H1 high		13*		10*	ns

† Numbers in this column are used in Figure 26.

\* This parameter is not production tested.

NOTE 11: Peripheral pins include CLKX0/1, CLKR0/1, DX0/1, DR0/1, FSX0/1, FSR0/1, and TCLK0/1. The modes of these pins are defined by the contents of internal control registers associated with each peripheral.

Figure 26. Timing for Peripheral Pin General-Purpose I/O

**changing the peripheral pin I/O modes**

The following tables show the timing parameters for changing the peripheral pin from a general-purpose output pin to a general-purpose input pin and the reverse.

**timing parameters for peripheral pin changing from general-purpose output to input mode (see Note 12 and Figure 27)**

NO.†		320C30-40		320C30-50		UNIT
		MIN	MAX	MIN	MAX	
95	$t_{h(H1H)}$ Hold time after H1 high		13	10		ns
96	$t_{su(GPIOH1L)}$ Setup time, peripheral pin before H1 low	9		9		ns
97	$t_{h(GPIOH1L)}$ Hold time, peripheral pin after H1 low	0		0		ns

† Numbers in this column are used in Figure 27.

NOTE 12: Peripheral pins include CLKX0/1, CLKR0/1, DX0/1, DR0/1, FSX0/1, FSR0/1, and TCLK0/1. The modes of these pins are defined by the contents of internal control registers associated with each peripheral.

**Figure 27. Timing for Change of Peripheral Pin From General-Purpose Output to Input Mode**

## MECHANICAL DATA

HFG (S-CQFP-F196)

CERAMIC QUAD FLATPACK WITH TIE BAR

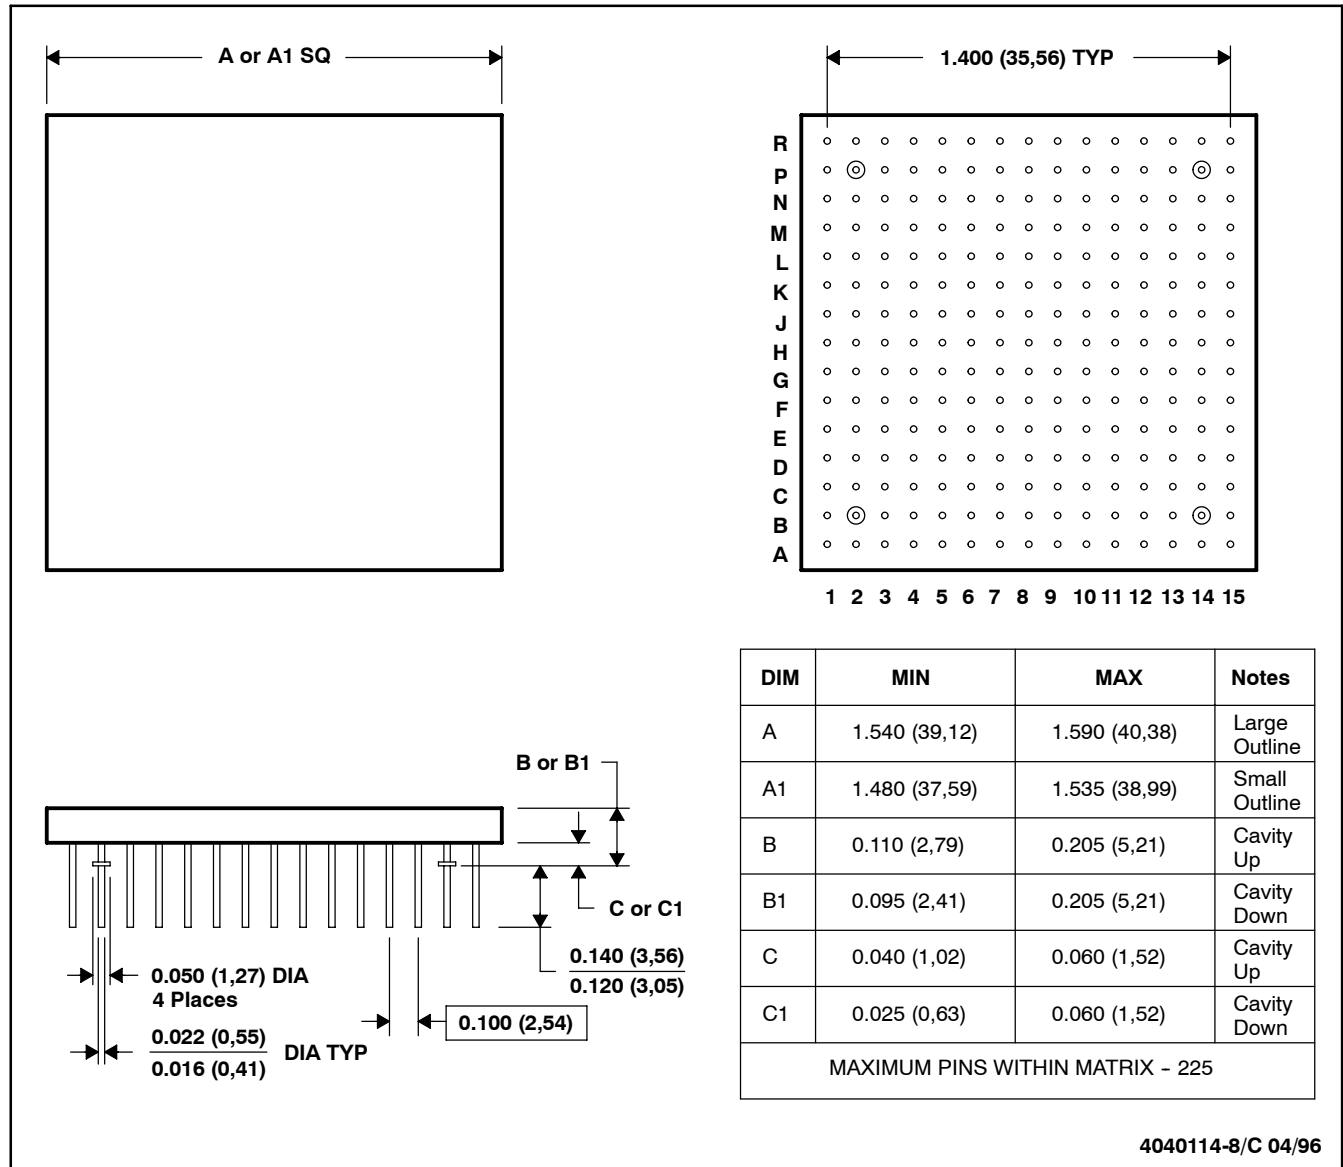

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Ceramic quad flatpack with flat leads brazed to nonconductive tie-bar carrier.
  - D. This package can be hermetically sealed with a metal lid.
  - E. The terminals will be gold plated.
  - F. Falls within JEDEC MO-113 AB

The above data applies to the SMJ320C30 196-pin QFP.

**MECHANICAL DATA (CONTINUED)**

**GA-GB (S-CPGA-P15 X 15)**

**CERAMIC PIN GRID ARRAY PACKAGE**

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Index mark may appear on top or bottom depending on package vendor.
  - D. Pins are located within 0.010 (0,25) diameter of true position relative to each other at maximum material condition and within 0.030 (0,76) diameter relative to the edges of the ceramic.
  - E. This package can be hermetically sealed with metal lids or with ceramic lids using glass frit.
  - F. The pins can be gold plated or solder dipped.
  - G. Falls within MIL-STD-1835 CMGA7-PN and CMGA19-PN and JEDEC MO-067AG and MO-066AG, respectively

**Thermal Resistance Characteristics**

PARAMETER	°C/W
R <sub>θJA</sub>	26.6
R <sub>θJC</sub>	1.1

The above data applies to the SMJ320C30 181-pin PGA.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

  - C. Index mark can appear on top or bottom, depending on package vendor.
  - D. Pins are located within 0.010 (0,25) diameter of true position relative to each other at maximum material condition and within 0.030 (0,76) diameter relative to the edge of the ceramic.
  - E. This package can be hermetically sealed with metal lids or with ceramic lids using glass frit.
  - F. The pins can be gold-plated or solder-dipped.
  - G. Falls within MIL-STD-1835 CMGA7-PN

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
