■ INTRODUCTION

SN67d10B is a 10 seconds one-channel single chip voice synthesizer IC which contains a PWM Direct Drive Circuit. There are two IO pins (one input, one IO), which can be configured as two trigger pins, or one trigger and one output. By filling a coding form, users' applications, including section combination, trigger modes, and different output status, can be easily implemented.

■ FEATURES

- Single power supply 2.4V – 5.5V
- 10 seconds voice capacity is provided
- 1-bit input port (P1) and 1-bit I/O port (P2) are provided
- 16*1 bits RAM are provided
- Built in a high quality speech synthesizer
- Two different playing rate, 6KHz and 8KHz.
- Built in a PWM Direct Drive circuit output BUO1 and BUO2 directly connected to Speaker for sound output
- System clock: 2MHZ
- Low Voltage Reset
