GENERAL DESCRIPTION

OVERVIEW

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a 800×3×600 dots panel with 262,144 colors by using LVDS(Low Voltage Differential Signaling)system for interface and supplying +3.3V/5.0V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type.

Therefore, this module is also suitable for the multimedia use.

This module is super-high brightness (1000cd/m²) and high contrast (500:1).

This module is the type of wide viewingangle the viewing angle is 6 o'clock direction.

Backlight-driving DC/DC inverter is not built in this module.

FEATURES

- (1) Excellent brightness (1000 nits)
- (2) SVGA (800 x 600 pixels) resolution
- (3) 3.3V LVDS (Low Voltage Differential Signaling) interface with 1 pixel/clock
- (4) Wide operating temperature
- (5) Meet RoHS requirement
- (6) Replaceable LED light bar design

[Note1] Pin name: VI₁ {RXINi/(i=0,1,2) RXCLK IN-/+/} VI₂ {R/L,U/D}

[Note2] Preserve it within this range.

[Note3] Humidity: Less the 95%RH at Ta ≤ 40 °C and

Maximum wet-bulb temperature must not exceed 39 °C at Ta > 40 °C,
with no condensation.

[Note4] Panel surface temperature when backlight lights (reference).

[Note5] The operating temperature only guarantees operation of the circuit. For contrast, speed response,
and other factors related to display quality, judgment is done using the ambient temperature Ta = +25 °C.

MEASURING METHOD

MEASURING SYSTEM

- (1) The measurement point is the center of the active area except the measurement of Luminance Uniformity.
- (2) Photometer : BM-7
- (3) Definition of φ and θ :

MEASURING METHODS

Luminance:

The luminance of the center on a white raster (gray scale level L63) shall be measured.
Measurement shall be executed 5 minutes after the LED light bar is lit up.

Contrast Ratio:

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = L63 / L0$$

L63 : Luminance on the white raster (gray scale level L63)

L 0 : Luminance on the black raster (gray scale level L0)

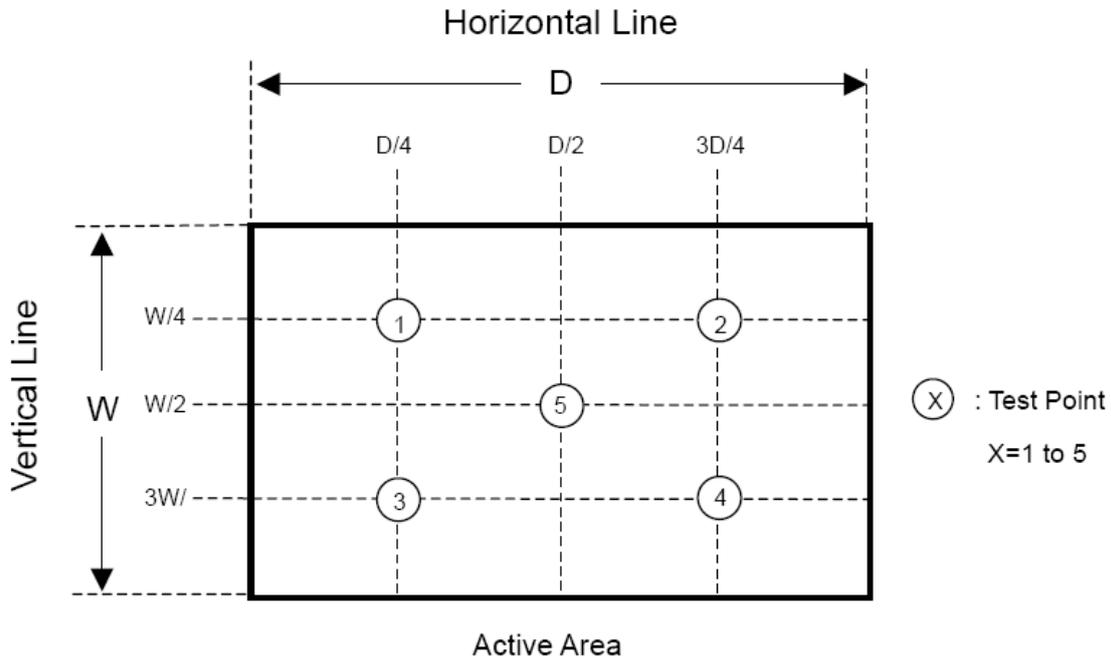

Viewing Angle:

Viewing angle is defined as the angles(T,I), in which specified contrast ratio can be obtained.
(Refer to Measuring Method (3) for the axes.)

(4) Luminance Uniformity:

The Luminance should be measured at 5 positions on white raster(gray scale level L63).
Uniformity can be calculated by the following expression.

$$\text{Luminance Uniformity} = \frac{\text{Minimum Luminance}}{\text{Maximum Luminance}} \times 100\%$$

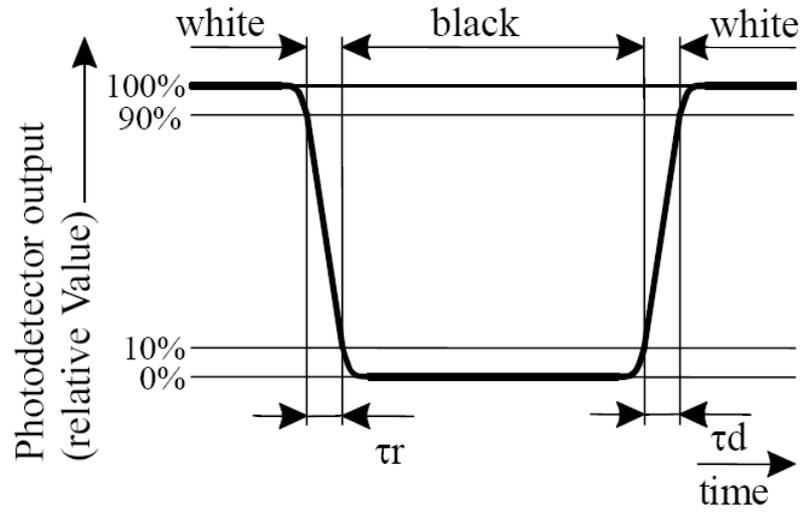

(5) Chromaticity:

The values(x,y) of chromaticity coordinates should be measured for the White, Red, Green and Blue Raster(gray scale level L63) each with a photometer.

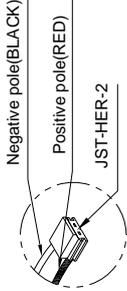

(6) Response Time:

The response time is defined as the following figure and shall be measured by switching the input signal for “black” and “white”.

PRECAUTIONS

ASSEMBLY AND HANDLING PRECAUTIONS

- (1) Do not apply rough force such as bending or twisting to the module during assembly.
- (2) It is recommended to assemble or to install a module into the user's system in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (3) Do not apply pressure or impulse to the module to prevent the damage of LCD panel and Backlight.
- (4) Always follow the correct power-on sequence when the LCD module is turned on. This can prevent the damage and latch-up of the CMOS LSI chips.
- (5) Do not plug in or pull out the I/F connector while the module is in operation.
- (6) Do not disassemble the module.
- (7) Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (8) Moisture can easily penetrate into LCD module and may cause the damage during operation.
- (9) High temperature or humidity may deteriorate the performance of LCD module. Please store LCD modules in the specified storage conditions.
- (10) When ambient temperature is lower than 10°C, the display quality might be reduced. For example, the response time will become slow.
- (11) When operation temperature is too high, it will affect the LED life time. We suggest to add the heat dispersion design for whole backlight module.

SAFETY PRECAUTIONS

- (1) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- (2) After the module's end of life, it is not harmful in case of normal operation and storage.
