

## GENERAL DESCRIPTION

The SP335 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards. Integrated cable termination and multiple configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. Full operation requires only four external charge pump capacitors.

The RS-485/RS-232 mode pin selects RS-485 mode when high, and RS-232 mode when low. In RS-485 mode, the TERM pin enables the differential 120Ω termination, and the HALF/FULL pin configures the transceiver as either half or full duplex.

The high speed drivers operate up to 20Mbps in RS-485/422 modes, and up to 1Mbps in RS-232 mode. All drivers can be slew limited to 250kbps in any mode to minimize electromagnetic interference (EMI) by setting the dedicated SLEW pin low.

All transmitter outputs and receiver inputs feature robust electrostatic discharge (ESD) protection to ±15kV IEC 61000-4-2 Airgap, ±15kV Human Body Model (HBM) and ±8kV IEC 61000-4-2 Contact. Each receiver output has full fail-safe protection to avoid system lockup, oscillation, or indeterminate states by defaulting to logic-high output level when the inputs are open, shorted, or terminated but undriven. No external biasing resistors are required.

The RS-232 receiver inputs include a 5kΩ pull-down to ground when in RS-232 mode. The RS-485/422 receiver inputs are high impedance (>96kΩ when termination is disabled), allowing up to 256 devices on a single communication bus (1/8th unit load).

The SP335 operates from a single power supply, either 3.3V or 5V, with low idle current. The shutdown mode consumes less than 1μA in low power standby operation with RS-232 receivers enabled.

## FEATURES

- **Pin-Selectable Cable Termination**
- **No External Resistors Required** for RS-485/422 Termination or Biasing
- **Robust ESD Protection:**
  - **±15kV IEC 61000-4-2 Air Gap Discharge**
  - **± 8kV IEC 61000-4-2 Contact Discharge**
  - **±15kV Human Body Model (HBM)**
- **20Mbps RS-485** and 1Mbps RS-232 Data Rates
- **Pin-Selectable 250kbps Slew Limiting**
- **Single Supply Operation from 3V to 5.5V**
- **1.65V to 5.5V Logic Interface V<sub>L</sub> pin**
- **2 Drivers, 2 Receivers RS-232/V.28**
- **1 Driver, 1 Receiver RS-485/422**
  - **Full or Half Duplex Configuration**
  - **1/8th Unit Load, up to 256 receivers on bus**
- **RS-485/422 Enhanced Receiver Fail-safe** for open, shorted, or terminated but idle inputs
- **10nA Shutdown Supply Current** (typical)
- **Small 32 QFN package (5mm x 5mm)**

## TYPICAL APPLICATIONS

- **Software Programmable Serial Ports** (RS-232, RS-422, RS-485)
- **Industrial and Single Board Computers**
- **Industrial and Process Control Equipment**
- **Point-Of-Sale Equipment**
- **HVAC Controls and Networking Equipment**
- **Building Security and Automation**

## ORDERING INFORMATION<sup>(1)</sup>

### NOTES:

1. Refer to [www.exar.com/SP335E](http://www.exar.com/SP335E) for most up-to-date Ordering Information
2. Visit [www.exar.com](http://www.exar.com) for additional information on Environmental Rating

## ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections to the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

Supply Voltage $V_{CC}$	-0.3V to 6.0V
Logic Interface Voltage $V_L$	$V_L \leq V_{CC}$
Voltage at TTL Input Pins	-0.3V to 6.0V
Receiver Input Voltage (from Ground)	$\pm 18V$
Driver Output Voltage (from Ground)	$\pm 18V$
Short Circuit Duration, TX out to Ground	Continuous
Storage Temperature Range	-65°C to 150°C
Lead Temperature (soldering, 10s)	300°C
Maximum Operating Junction Temperature, $T_J$	125°C
Power Dissipation 32-pin 5x5 QFN (derate 26.0mW/°C above +70°C)	1400mW

### CAUTION:

ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

## ESD PROTECTION

		MIN.	TYP.	MAX.	UNITS	
	TX Output & RX Input Pins		$\pm 15$		kV	IEC 61000-4-2 Airgap
			$\pm 8$		kV	IEC 61000-4-2 Contact
			$\pm 15$		kV	Human Body Model (HBM)
	All Other Pins		$\pm 3$		kV	Human Body Model (HBM)

## PRODUCT SUMMARY

The SP335 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards. Integrated cable termination and multiple configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. Full operation requires only four external charge pump capacitors.

### INTERNALLY SWITCHED CABLE TERMINATION

Enabling and disabling the RS-485/422 termination resistor is one of the largest challenges system designers face when sharing a single connector or pair of lines across multiple serial protocols. A termination resistor may be necessary for accurate RS-485/422 communication, but must be removed when the lines are used for RS-232. SP335 provides an elegant solution to this problem by integrating the termination resistor and switching control, and allowing it to be switched in and out of the circuit with a single pin. No external switching components are required. Termination on the receiver inputs will be enabled if both TERM and RS-485/RS-232 are high.

### ENHANCED FAILSAFE

The enhanced failsafe feature of the SP335 guarantees a logic-high receiver output when the receiver inputs are open, shorted, or terminated but idle/undriven. The enhanced failsafe interprets 0V differential as a logic high with a minimum 50mV noise margin, while maintaining compliance with the EIA/TIA-485 standard of  $\pm 200\text{mV}$ . No external biasing resistors are required, further easing the usage of multiple protocols over a single connector.

### $\pm 15\text{kV}$ ESD PROTECTION

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The bus pins (driver outputs and receiver inputs) have extra protection structures, which have been tested up to  $\pm 15\text{kV}$  without damage. These structures withstand high ESD in all states: normal operation, in shutdown, and when powered off.

ESD protection is tested in various ways. Exar uses the following methods to qualify the protection structures designed into SP335:

- $\pm 8\text{kV}$  using IEC 61000-4-2 Contact Discharge

- $\pm 15\text{kV}$  using IEC 61000-4-2 Airgap Discharge

- $\pm 15\text{kV}$  using the Human Body Model (HBM)

The IEC 61000-4-2 standard is more rigorous than HBM, resulting in lower voltage levels compared with HBM for the same level of ESD protection. Because IEC 61000-4-2 specifies a lower series resistance, the peak current is higher than HBM. The SP335 has passed both HBM and IEC 61000-4-2 testing without damage.

### VARIABLE LOGIC LEVEL VOLTAGE

The SP335 includes a  $V_L$  pin, which reduces the logic level thresholds to interface with processors operating at reduced supply voltages. This pin should be connected to the supply voltage of the processor, or can be connected to  $V_{CC}$  for typical logic levels.

## TRUTH TABLES
