

SP3485

+3.3V Low Power Half-Duplex RS-485 Transceiver with 10Mbps Data Rate

- RS-485 and RS-422 Transceiver
- Operates from a single +3.3V Supply
- Interoperable with +5.0V logic
- Driver/Receiver Enable
- -7V to +12V Common-Mode Input Voltage Range
- Allows up to 32 transceivers on the serial bus
- Compatibility with industry standard 75176 pinout
- Driver Output Short-Circuit Protection

DESCRIPTION

The **SP3485** device is a +3.3V low power half-duplex transceiver that meets the specifications of the RS-485 and RS-422 serial protocols. This device is pin-to-pin compatible with the **Exar** SP481, SP483 and SP485 devices as well as popular industry standards. The **SP3485** features the **Exar** BiCMOS process, allowing low power operation without sacrificing performance. The **SP3485** can meet the electrical specifications of the RS-485 and RS-422 serial protocols up to 10Mbps under load.

SP3485

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V _{CC}	+6.0V
Input Voltages	
Logic.....	-0.3V to +6.0V
Drivers.....	-0.3V to +6.0V
Receivers.....	+/-15V
Output Voltages	
Drivers.....	+/-15V
Receivers.....	-0.3V to +6.0V
Storage Temperature.....	-65°C to +150°C
Power Dissipation	
8-pin NSOIC.....	600mW
	(derate 6.90mW/°C above +70°C)

ELECTRICAL CHARACTERISTICS

T_{AMB} = T_{MIN} to T_{MAX} and V_{CC} = +3.3V +/-5% unless otherwise noted.

PIN FUNCTION

Pin Function SP3485

Pin 1 - RO - Receiver output

Pin 2 - \overline{RE} - Receiver Output Enable Active LOW

Pin 3 - DE - Driver Output Enable Active HIGH

Pin 4 - DI - Driver Input

Pin 5 - GND - Ground Connection

Pin 6 - A - Non-Inverting Driver Output/Receiver Input

Pin 7 - B - Inverting Driver Output/Receiver Input

Pin 8 - Vcc - Positive Supply

The **SP3485** is a member in the family of +3.3V low power half-duplex transceivers that meet the electrical specifications of the RS-485 and RS-422 serial protocols. This device is pin-to-pin compatible with the **Exar** SP481, SP483 and SP485 devices as well as popular industry standards. The **SP3485** feature **Exar's** BiCMOS process allowing low power operation without sacrificing performance.

Driver

The driver outputs of the **SP3485** are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 volts to +3.3 Volts. With a load of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels.

The driver of the **SP3485** has a driver enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE (pin 3) will tri-state the driver outputs.

The driver of the SP3485 operates up to 10Mbps. The 250mA I_{SC} maximum limit on the driver output allows the SP3485 to withstand an infinite short circuit over the -7.0V to +12V common mode range without catastrophic damage to the IC.

Receiver

The **SP3485** receiver has differential inputs with an input sensitivity of ±200mV. Input impedance of the receiver is typically 15kΩ (12kΩ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receiver is equipped with a fail-safe feature that guarantees the receiver output will be in a HIGH state when the input is left unconnected. The receiver of the **SP3485** operates up to 10Mbps.

The receiver of the **SP3485** has an enable control line which is active LOW. A logic LOW on \overline{RE} (pin 2) will enable the differential receiver. A logic HIGH on RE (pin 2) of the **SP3485** will disable the receiver.
