

3.3V Low Power Full-Duplex RS-485 Transceivers with 10Mbps Data Rate

Description

The [SP3490](#) and [SP3491](#) devices are 3.3V low power full-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the MaxLinear SP490 and SP491 devices as well as popular industry standards. The SP3490 and SP3491 feature MaxLinear's BiCMOS process, allowing low power operation without sacrificing performance. The SP3490 and SP3491 meet the electrical specifications of the RS-485 and RS-422 serial protocols up to 10Mbps under load. The SP3491 is identical to the SP3490 with the addition of driver and receiver tri-state enable lines.

FEATURES

- Full-duplex RS-485 and RS-422 transceivers
- Operates from a single 3.3V supply
- Interoperable with 5.0V logic
- Driver/receiver tri-state enable lines (SP3491)
- -7V to 12V common-mode input voltage range
- $\pm 200\text{mV}$ receiver input sensitivity
- Allows up to 32 transceivers on the serial bus
- Compatibility with LTC490 and SN75179 (SP3490)
- Compatibility with LTC491 and SN75180 (SP3491)

Absolute Maximum Ratings

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC} 6.0V

Input Voltages

Logic -0.3V to 6.0V

Drivers -0.3V to 6.0V

Receivers..... ±14V

Output Voltages

Drivers ±14V

Receivers..... -0.3V to 6.0V

Storage Temperature -65°C to +150°C

Maximum Junction Temperature, T_J 125°C

Power Dissipation

8-pin NSOIC 600mW

(derate 6.90mW/°C above +70°C)

14-pin NSOIC 700mW

(derate 8.33mW/°C above +70°C)

Operating Conditions

Package Power Dissipation

8-pin NSOIC Θ_{JA} 128.4°C/W

14-pin NSOIC Θ_{JA} 88.2°C/W

ESD Rating

Human Body Model (HBM)..... ±2kV

Electrical Characteristics

NOTES

1. The input pulse is supplied by a generator with the following characteristics:
 PRR = 250kHz, 50% duty cycle, $t_r < 6.0ns$, $Z_o = 50\Omega$.
2. C_L includes probe and stray capacitance.

Description

The SP3490 and SP3491 are two members in the family of 3.3V low power full-duplex transceivers that meet the electrical specifications of the RS-485 and RS-422 serial protocols. These devices are pin-to-pin compatible with the MaxLinear SP490 and SP491 devices as well as popular industry standards. The SP3490 and SP3491 feature MaxLinear's BiCMOS process allowing low power operation without sacrificing performance.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to 12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Drivers

The drivers for both the SP3490 and SP3491 have differential outputs. The typical voltage output swing with no load will be 0 volts to V_{cc} . With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels.

The driver of the SP3491 has a driver enable control line which is active HIGH. A logic HIGH on DE (pin 4) of the SP3491 will enable the differential driver outputs. A logic LOW on the DE (pin 4) will tri-state the driver outputs. The SP3490 does not have a driver enable.

Receivers

The receivers of the SP3490 and SP3491 have differential inputs with an input sensitivity of $\pm 200\text{mV}$. Input impedance of the receivers is typically $15\text{k}\Omega$ ($12\text{k}\Omega$ minimum). A wide common mode range of -7V to 12V allows for large ground potential differences between systems. The receivers for both the SP3490 and SP3491 are equipped with a fail-safe feature that guarantees the receiver output will be in a HIGH state when the input is left unconnected.

The receiver of the SP3491 has an enable control line which is active LOW. A logic LOW on $\overline{\text{REB}}$ (pin 3) of the SP3491 will enable the differential receiver. A logic HIGH on $\overline{\text{REB}}$ (pin 3) of the SP3491 will tri-state the receiver.

Revision History

Revision	Date	Description
10/11/02	--	Legacy Sipex Datasheet
06/08/10	1.0.0	Convert to Exar Format. Update ordering information as a result of discontinued Lead type package options per PDN 081126-01. Change revision to 1.0.0. Add new Figure 8 - Driver Short Circuit Current Limit Test Circuit
9/14/10	1.0.1	Correct package type for SP3491 options in ordering table from 8 pin NSOIC to 14 pin NSOIC
10/27/10	1.0.2	Add ESD protection levels of +/-2kV. Remove SP3490 Supply Current rating for DE = 0V (No driver enable for SP3490).
09/06/17	1.0.3	Update to MaxLinear logo. Update pin description table to include note on NC pin. Remove GND from Differential Output Voltage min (page 2 and 4). Added maximum junction temperature, package power dissipation and ESD rating. Update format and ordering information table.
