

SPE6V8UD

Ultra Low Capacitance 4 -Line ESD Protection Array

DESCRIPTION

The SPE6V8UD is 4-channel very low capacitance ESD transient voltage suppressor which provides a very high level of protection for sensitive electronic components that may be subjected to electrostatic discharge. It is particularly well-suited to protect systems with high speed communication lines from ESD, EFT, and lightning.

The SPE6V8UD consists of eight low capacitance steering diodes and a TVS diode in a SLP package. Each channel of SPE6V8UD could safely dissipate ESD strikes of $\pm 15\text{KV}$ air discharge as well as $\pm 8\text{KV}$ contact discharge, meeting the requirement of the IEC 61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the device provides protection for contact discharges to greater than $\pm 15\text{KV}$.

APPLICATIONS

- ◆ Cellular Handsets and Accessories
- ◆ Cordless Phone
- ◆ PDA
- ◆ Notebooks and Handhelds
- ◆ Portable Instrumentation
- ◆ Digital Cameras
- ◆ MP3 Player High Definition Multi-Media Interface Protection
- ◆ USB 2.0 Power and Data Line
- ◆ Monitors and Notebook Computers
- ◆ HDSL, IDSL Secondary IC Side Protection
- ◆ 10/100/1000 Ethernet

FEATURES

- ◆ Transient protection for data lines to

IEC 61000-4-2 (ESD)
 $\pm 15\text{kV}$ (air)
 $\pm 8\text{kV}$ (contact)

IEC 61000-4-4 (EFT)
 40A (5/50ns)

www.DataSheet4U.com

- ◆ Protects five bidirectional I/O lines
- ◆ Working voltage: 5V
- ◆ Low leakage current
- ◆ Low operating and clamping voltages
- ◆ Low capacitance: 0.35 pF typical

SCHEMATIC & PIN CONFIGURATION

As Figure Shown is an example of how to route the high speed differential traces through the SPE6V8UD. The solid line represents the PCB trace. The PCB traces are used to connect the pin pairs for each line (pin 1 to pin 10, pin 2 to pin 9, pin 4 to pin 7, pin 5 to pin 6). For example, line 1 enters at pin 1 and exits at Pin 10 and the PCB trace connects pin 1 and 10 together. This is true for lines connected at pins 2, 4, and 5 also. Ground is connected at pins 3 and 8. One large ground pad should be used in lieu of two separate pads.

Flow through Layout Using SPE6V8UD

APPLICATION INFORMATION (Design Recommendations for HDMI Protection)

Adding external ESD protection to HDMI ports can be challenging. First, ESD protection devices have an inherent junction capacitance. However, adding even a small amount of capacitance will cause the impedance of the differential pair to drop. Second, large packages and land pattern requirements cause discontinuities that adversely affect signal integrity. The SPE6V8UD is specifically designed for protection of high-speed interfaces such as HDMI. They present $<0.4\text{pF}$ capacitance between the pairs while being rated to handle $\pm 8\text{KV}$ ESD contact discharges (15KVair discharge) as outlined in IEC61000-4-2. Each device is in a leadless DFN package that is less than 1.1mm wide. They are designed such that the traces flow straight through the device. The narrow package and flow-through design reduces discontinuities and minimizes impact on signal integrity. This becomes even more critical as signal speeds increase.
