

Product Description

Sirenza Microdevices' SPF-3143Z is a high performance 0.5μm pHEMT Gallium Arsenide FET. This 600μm device is ideally biased at 3V, 20mA for lowest noise performance and battery powered requirements. At 5V, 40mA the device can deliver OIP3 of 32.5 dBm. It provides ideal performance as a driver stage in many commercial and industrial LNA applications.

The matte tin finish on Sirenza's lead-free package utilizes a post annealing process to mitigate tin whisker formation and is RoHS compliant per EU Directive 2002/95. This package is also manufactured with green molding compounds that contain no antimony trioxide nor halogenated fire retardants.

Junction Temperature Calculation

MTTF is inversely proportional to the device junction temperature. For junction temperature and MTTF considerations the device operating conditions should also satisfy the following expression:

$$P_{DC} < (T_J - T_L) / R_{TH}$$

where:

- P_{DC} = $I_{DS} * V_{DS}$ (W)
- T_J = Junction Temperature (C)
- T_L = Lead Temperature (pin 2) (C)
- R_{TH} = Thermal Resistance (C/W)

Biasing Details

The SPF-3143Z is a depletion mode FET and requires a negative gate voltage to achieve pinchoff. As such, power supply sequencing circuitry is strongly recommended to prevent damaging bias transients during turn-on. Active bias circuitry is also recommended to maintain a constant drain current from part-to-part.

Absolute Maximum Ratings

Parameter	Symbol	Value	Unit
Drain Current	I_{DSS}	180	mA
Forward Gate Current	I_{GSF}	600	μ A
Reverse Gate Current	I_{GSR}	600	μ A

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page 1.
