SPN4906
N-Channel Enhancement Mode MOSFET

DESCRIPTION
The SPN4906 is the Dual N-Channel enhancement mode power field effect transistors are produced using high cell density , DMOS trench technology. This high density process is especially tailored to minimize on-state resistance and provide superior switching performance. These devices are particularly suited for low voltage applications such as notebook computer power management and other battery powered circuits where high-side switching , low in-line power loss, and resistance to transients are needed.

FEATURES
- N-Channel
  40V/6.0A,$R_{DS(ON)}$=45mΩ@V_{GS}=10V
