

- Ideal for 434.42 MHz Transmitters
- Very Low Insertion Loss
- Quartz Stability
- Ultra Miniature Ceramic SMD Package (QCC8C)

**SR5520**

NS = Not Specified

#### Note:

- The frequency f<sub>c</sub> is the frequency of minimum IL with the resonator in the specified test fixture in a 50Ω test system with VSWR ≤ 1.2:1.
- 2. Unless noted otherwise, case temperature TC = +25°C±2°C.
- 3. Frequency aging is the change in fC with time and is specified at +65°C or less. Aging may exceed the specification for prolonged temperatures above +65°C. Typically, aging is greatest the first year after manufacture, decreasing in subsequent years.
- Turnover temperature, T0, is the temperature of maximum (or turnover) frequency, f0. The nominal frequency at any case temperature, TC, may be calculated from: f = f<sub>o</sub> [1 - FTC (T<sub>O</sub> - T<sub>C</sub>)<sup>2</sup>].
- 5. This equivalent RLC model approximates resonator performance vww. Dnear the resonant frequency and is provided for reference only. The capacitance C<sub>0</sub> is the measured static (nonmotional) capacitance between input terminal and ground or output terminal and ground.

- The measurement includes case parasitic capacitance.
- Derived mathematically from one or more of the following directly measured parameters: f<sub>c</sub>, IL, 3 dB bandwidth, f<sub>C</sub> versus T<sub>C</sub>, and Co.
- The specifications of this device are based on the test circuit shown above and subject to change or obsolescence without notice.
- Typically, equipment utilizing this device requires emissions testing and government approval, which is the responsibility of the equipment manufacturer.
- Our liability is only assumed for the Surface Acoustic Wave (SAW) component(s) per se, not for applications, processes and circuits implemented within components or assemblies.
- For questions on technology, prices and delivery, please contact our sales offices or e-mail to sales@vanlong.com.
