ST41xx Series

Description

A crystal controlled, low-current oscillator providing precise rise and fall times to drive ACMOS/LVCMOS loads. The tri-state function enables the output to go high impedance. Available in either a 14 or an 8 pin DIP compatible, resistance welded, all metal case. Pin 7 (or Pin 4) is grounded to case to reduce EMI. True SMD DIL 14 version also available, utilizing new adaptor technology (see separate data sheet for package dimensions).

Applications & Features

- Fiber Channel
- Gigabit Ethernet
- HCMOS/ACMOS/LVCMOS MPU's
- 3.3 or 5V operation
- High Drive capability
- Tri-State output standard
- Short circuit protected output
- Plastic SMD available, see ST41xH Series data sheet.
- Ceramic SMD available, see S19xx Series data sheet.
- True SMD version available, select option S in part number builder (see separate data sheet for package dimensions).
