ST485

Low power RS-485/RS-422 transceiver

General features

- Low quiescent current: 300mA
- Designed for RS-485 interface application
- -7V to 12V common mode input voltage range
- Driver maintains high impedance in 3-state or with the power OFF
- 70mV tipycal input hysteresis
- 30ns propagation delay, 5ns skew
- Operate from a single 5V supply
- Current limiting and thermal shutdown for driver overload protection
- Allows up to 64 transceivers on the bus

Description

The ST485 is al low power transceiver for RS-485 and RS-422 communication. Each part contains one driver and one receiver.

This transceiver draw 300mA (typ.) of supply current when unloaded or fully loaded with disabled drivers.

It operates from a single 5V supply.

Driver is short-circuit current limited and is protected against excessive power dissipation by thermal shutdown circuitry that placed the driver outputs into a high-impedance state.

The ST485 is designed for bi-directional data communications on multipoint bus transmission line (half-duplex applciations).

The ST485 is available in three temperature range: commercial (0°C to 70°C), industrial (-40°C to 850°C) and automotive (-55°C to 125°C)

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
