Ordering number:ENN1709C

Thick Film Hybrid IC

STK795

Chopper Type Voltage Regulator

Features

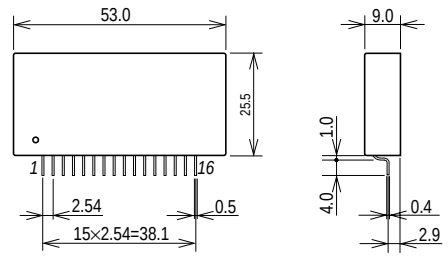
- Self-oscillation type chopper regulator power IC using Sanyo's original IMST (Insulated Metal Substrate Technology) substrate.
- The STK795, being a 5V chopper IC, is more advantageous in the following points as compared with series regulator (dropper type) ICs.
  1. Possible to provide a 5V output power supply circuit with high efficiency.
  2. Since the input voltage range is wide, no more than one rectifying/smoothing circuit is required to provide a multi-output power supply circuit which also delivers 12V or 24V output.
- Functional trimming is used to set 5V output with high accuracy.
- Cutoff function to cut off output voltage by external signal.
- Contains a transistor for overcurrent protector (foldback characteristic) and possibel to set the protection level externally.

Package Dimensions

unit:mm

4063A

[STK795]



SANYO : SIP16

Specifications

Maximum Ratings at Ta = 25˚C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum DC Input Voltage	$V_{in(DC)}$ max		40	V
Maximum Output Current	I_O max		3	A
Operating Substrate Temperature	Tc		105	˚C
Junction Temperature	Tj		150	˚C
Storage temperature	Tstg		–30 to +105	˚C

Operating Characteristics at Ta = 25˚C, See specified Test Circuit.

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Output Voltage	V_O	V_{IN}=12V, I_O=1.5A	4.9	5.0	5.1	V
Line Regulation		V_{IN}=10 to 15V, I_O=1.5A		70	100	mV
Load Regulation		V_{IN}=12V, I_O=0.5 to 3A		30	60	mV
Efficiency		V_{IN}=12V, I_O=1.5A		72		%
Frequency	f	V_{IN}=12V, I_O=1.5A		35		kHz
Temperature Coefficient		V_{IN}=12V, I_O=1.5A		1		mV/˚C

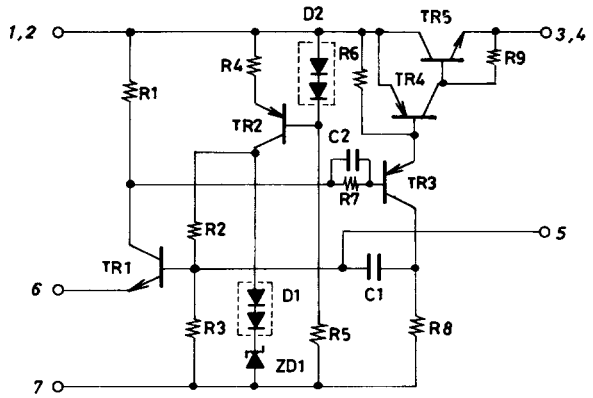
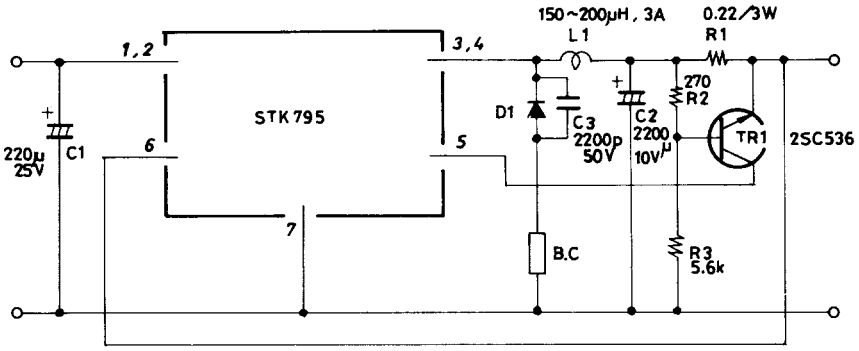
Equivalent Circuit



Test Circuit



Unit (resistance: Ω, capacitance: F)

Note) · D1 : Schottky barrier diode SB40-05.
· B. C. : Beads core, 2 to 3μH.
· C3, B. C. are used to reduce switching spike noise.
· TR1 is used to provide overcurrent protection.
If no protection is required, remove TR1.
· A current of 0.5A min. must flow in the load.

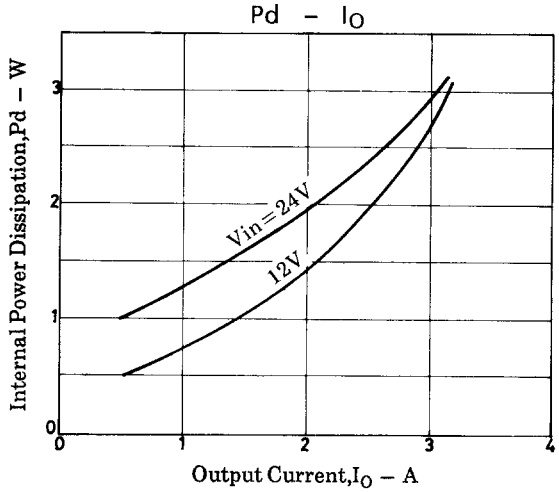
Thermal Design

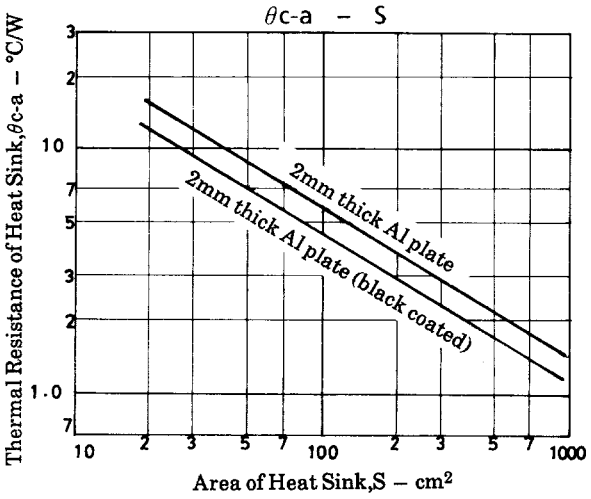
The total internal power dissipation in the IC is related to the output current as shown below. Assuming $V_{in(DC)}$=12V, output current=3A, the total internal power dissipation is 2.7W.



Assuming that the IC case temperature (Al plate) is 85°C (Tc max=105°C) and the temperature inside equipment is 60°C max., the thermal resistance required of the heat sink is as shown below.

$$\theta c\text{-}a = \frac{85°C - 60°C}{2.7W}$$

$$= 9.3°C/W$$



For 2mm thick Al plate (black coated), the area is 30cm^2. (55×55×2t)

Junction temperature Tj of the power transistor which forms a main heat source is calculated as follows :

The thermal resistance of the power transistor is : θj-c=6.2°C/W

Therefore, Tj is calculated using Tj=Pd×θj-c+Tc.

Tj=2.7W×6.2°C/W+85°C=101.7°C

Since the actual thermal resistance of the heat sink greatly depends on various conditions such as the layout of equipment or ventilation, allow an ample margin in thermal design.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products(including technical data,services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
