Operating Instructions

In order to achieve an operating lifetime $> 10^5 \text{ h}$, which is required for Telcom applications, a forward current of $I_F = 50 \text{ mA DC}$ is recommended.

- Notes:**
- 1) Driving current is a square wave, 50 % duty cycle, 60 mA_{pk} current at 1 MHz.
 Φ_e is the average optical power coupled into the specified fiber.
 - 2) Optimum coupling on cap surface, no adjustment in z-axis necessary.

Rel. Spectral Emission
 $\Phi_e = \Phi_e(\lambda)$

Forward Current CW
 $I_F = I_F(T_A)$
