Description

This N-channel Power MOSFET is based on the most innovative super-junction MDmesh M9 technology, suitable for medium/high voltage MOSFETs featuring very low R_{DS(on)} per area. The silicon based M9 technology benefits from a multi-drain manufacturing process which allows an enhanced device structure. The resulting product has one of the lower on-resistance and reduced gate charge values, among all silicon based fast switching super-junction Power MOSFETs, making it particularly suitable for applications that require superior power density and outstanding efficiency.
