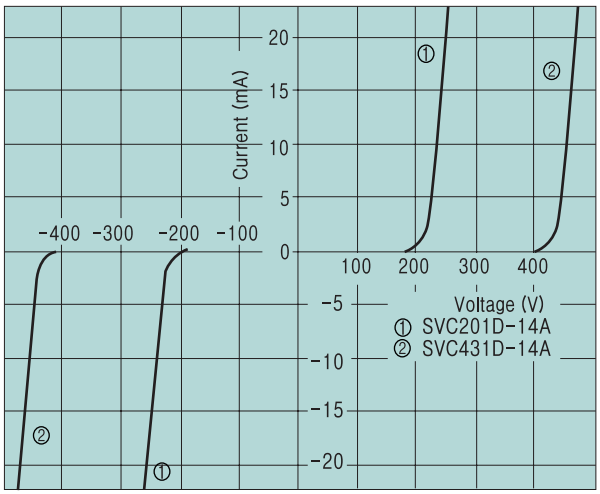
SVC

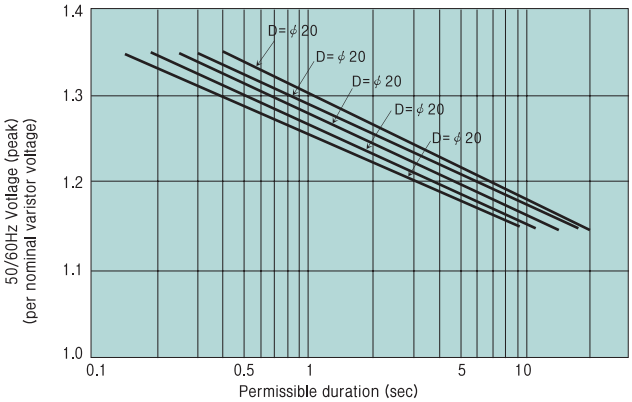
SVC CHARACTERISTIC CURVES

V-I CURVE

• Small - current region of V - I curve

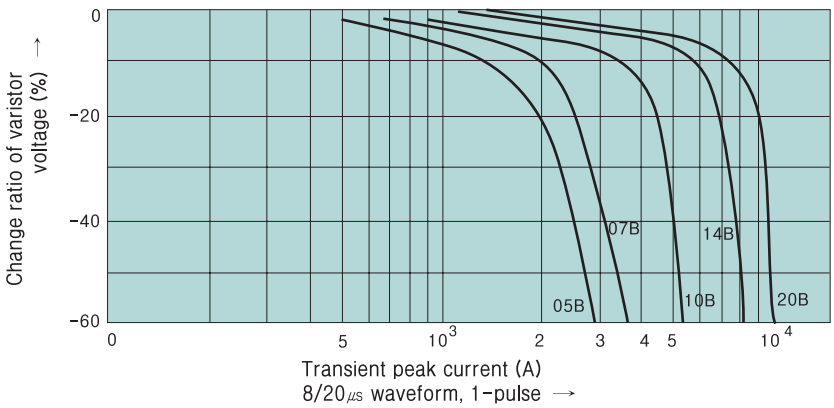


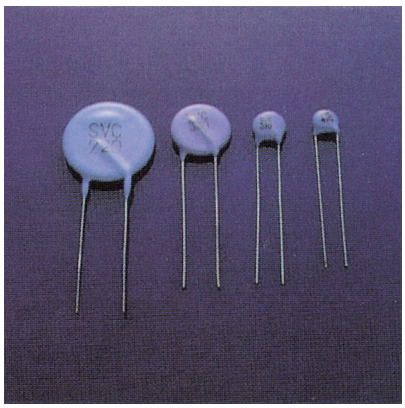
• Temporary power frequency over voltage capability



B TYPE

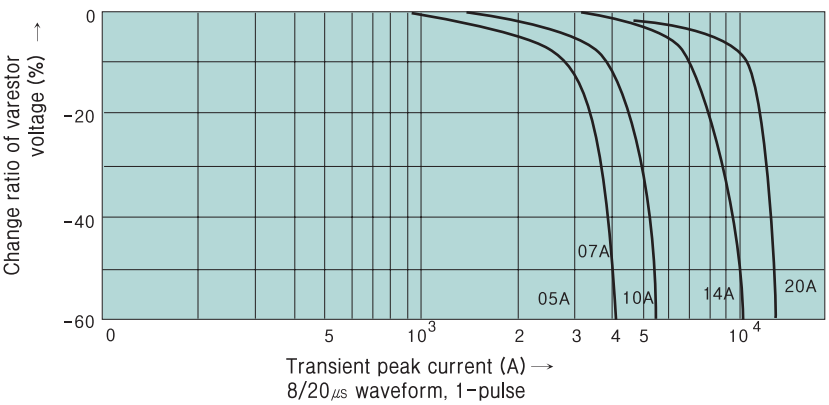
• Withstand discharge impulse current characteristics (Typical)

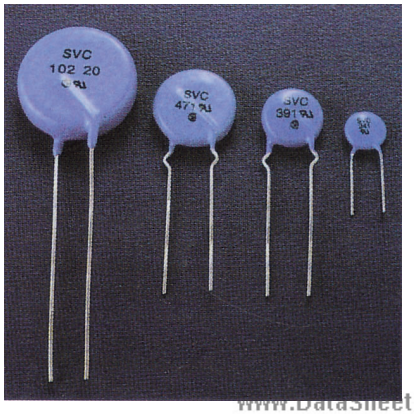




A TYPE

• Withstand discharge impulse current characteristics (Typical)





CERAMIC SURGE ABSORBERS (VARISTORS)

SVC

Notes :

①The waveform of the maximum DC applied voltage is flat. When a ripple voltage as from a rectifier source is supplied make sure that the peak voltage is kept under th Vdcm
An AC applied voltage(50/60Hz) form a since waveshape.
When the distortion in the waveform is extensive make sure that the peak voltage is less than $\sqrt{2}$times the Vacm.

②Energy : Wtm
Transient energy ratings are given in the Wtm column of the specifications in Joules (watt-second).
The rating is the maximum allowable energy for a single impulse of 2ms square-waveform current with continuous voltage applied. Energy ratings are based on a shift of Vnom of less than ±10% of initial value.

③Transient peak current (Itm)
The peak current rating. Itm. of varistor is based on an 8/20μs test impulse waveshape.
This peak current is the maximum peak current in which the nominal varistor voltage shift does not exceed ±10% when the test impulse is applied twice at 5 mimutes intervals.

④Nominal varistor voltage : Vnom
Indicates the varistor terminal voltage measured with a 1mA DC applied.
-0.1mA DC in the case of the 0.5A and 05B series.

⑤Maximum clamping voltage : Vc
Indicates the peak teminal voltage measured with an 8/20μs impulse current applied.

- Operating ambient temperature : -40℃ to +80℃
- Storage temperature : -40℃ to +125℃
- UL and CSA recognized (UL 1449, UL 497B or UL 1414, CSA)
  SVC varistors have been tested by Underwriter's Laboratories, Inc. and Canadian Standards Association
  UL File No. E97754, E151195, E154171.
  CSA File No. LR78923.

SVC

APPLICATIONS

• The protection of semiconducting elements such as diodes, thyristors, transistors, IC and relays against transient voltages.
• Similar protection of many types of measuring instruments, control machinery and communication equipment and broadcasting equipment against inductive lightning and switching surges.
• Protection of general purpose electrical equipment, domestic mechinery and appliances. TV and radios and similar consumer products against lightning and switching surges.

■ Power supply circuit protection

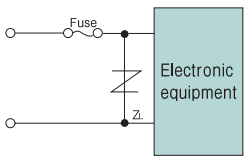
• Line circuit

Varistor voltage selection table (Z_L)

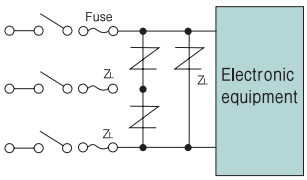
Power supply voltage	Type
100V AC	SVC201D-□□A SVC221D-□□A SVC241D-□□A SVC271D-□□A*
200V AC	SVC391D-□□A SVC431D-□□A SVC471D-□□A*
12V DC	SVC220D-□□B
24V DC	SVC390D-□□B

Notes :
①The power supply voltage must not exceed the maximum allowable circuit voltage.
②Since independent wiring loads and capacitive loads cause the voltage build-up at the time of opening or closing the load, use SVC having a varistor voltage as high as possible.(*mark)
③The bold faced portions of the type letters vary.

• AC/DC single-phase circuit



• AC three-phase circuit



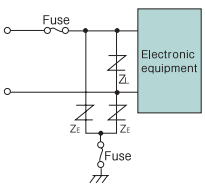
• Line and groud circuit

Varistor voltage selection table (Z_E)

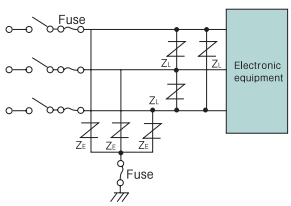
Power supply voltage	Type
100V AC 200V AC	SVC431D-□□A SVC471D-□□A SVC751D-□□A to SVC 112D-□□A* SVC182D-□□A**

Notes :
①When subjected to megger testing (500V DC), the insulation resistance value can decrease due to the leakage current of the SVC, To avoid this remove the varistor or use* marked SVC.
②When subjected to dielectric strength test(1000V AC). remove the SVC or use** marked SVC.
Select varistors taking a note of operating conditions peculiar to the equipment.

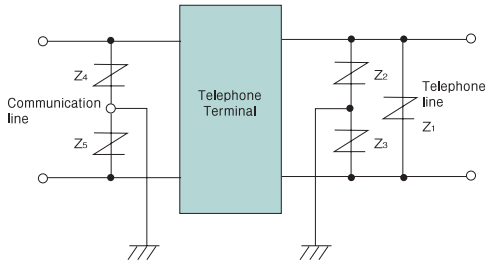
• AC/DC single-phase circuit



• AC three-phase circuit



■ Telecommunication circuit protection



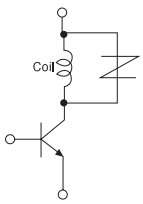
Varistor voltage selection guied

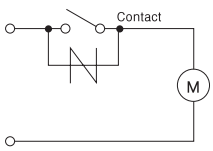
Power supply voltage	Type
12V DC	SVC180D-□□B SVC220D-□□B SVC820D-□□A
24V AC	SVC390D-□□B SVC820D-□□A

Notes :
The varistor SVC has a capacitance value. Take not of this when applying them to high-frequency signal circuits.

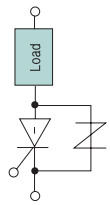
■ Switching circuit protection

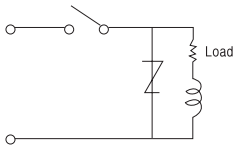
Protection of relay (Contact coil)





Protection of semiconductors





Varistor voltage selection guide

Power supply voltage	Type
12V DC	SVC220D-□□B
24V DC	SVC390D-□□B
100V DC	SVC151D-□□A
100V AC	SVC201D-□□A SVC221D-□□A SVC241D-□□A SVC271D-□□A

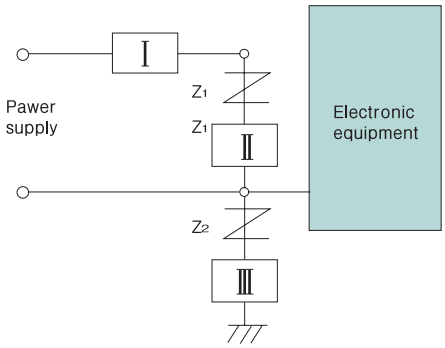
Notes :
①The power supply voltage must not exceed the maximum allowable circuit voltage of the SVC
②Pay due attention to the surge energy generated by the load.
③Select SVC referring to the pulse lifetime rating.
④To further reduce the tendency of sparking across the contacts connect a capacitor parallel with the SVC. This will also protect the equipment from electromagnetic wave jamming.

SVC

■ Application notes

1. Overcurrent protection

When surges exceed the rating for the SVC, short-circuits or damages can be expected. Take following precautions.



① Connect the SVC at a position nearer to the equipment than the overcurrent protection device "Ⅰ"(fuse, MCCB) as is shown in the diagram.
When the SVC is shorted, the overcurrent protection device "Ⅰ" operates (trips or blow off the fuse).
② If the overcurrent protection device "Ⅰ" can not be installed in "Ⅰ" position, connect a fuse at "Ⅱ" position. Select fuse rated current for the SVC referring to the following table.

SVC	05A 05B	07A 07B	10A 10B	14A 14B	20A 20B
Applicable fuse rated current(A)	1 to 2	2 to 3	3 to 5	3 to 10	5 to 15

③ When "Z_2" SVC is connected between the equipment and ground install an ELCB (Earth Leakage Circuit Breaker). If not possible, connect a fuse or thermal fuse at "Ⅲ"position.

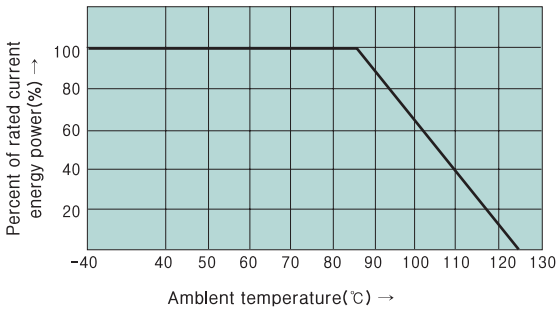
2.Installation

① When operated at location near heating element or exposed to direct sun light, confirm that the the ambient temparature range.
② When operated in dusty or dirty locations, or exposed to corrosive atomospheres, or where metallic powders or salt can be expected, be sure to mount within a protective enclosure.

3. Molding

When shielding the SVC in a resin molding, take a note of the materials used and temperature, since they influence the reliability. For further information please contact SAMWHA

4.Current, power and energy rating vs, temperature



5. Electrical Characteristics

Operating ambient temperature	-40℃ to + 85℃
Storage temperature	-40℃ to + 125℃
Voltage temperature coefficient	-0.05%℃
Insulation resistance(at500V)	Over 1000MΩ

SVC

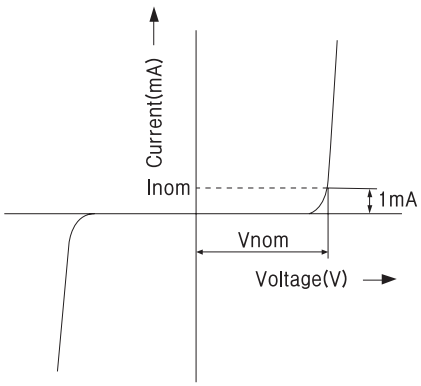
Varistor Terminology

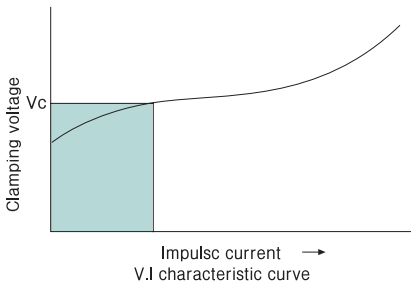
• Varistor Voltage : Vnom

Varistor peak terminal voltage measured with a specified current applied
The DC current applied is 1mA normally.



• Clamping voltage : Vc

Maximum terminal voltage (peak voltage across the varistor) measured with an applied 8/20㎲ impulse of a given peak current.



• Capacitance

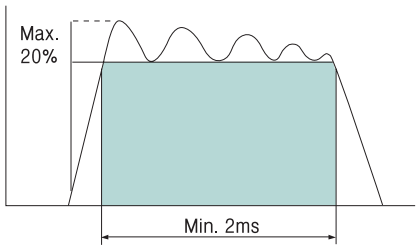
Typical values measured at a test frequency of 1kHz

• Rated peak transient current : itm

Maximum peak current through the varistor with line voltage applied.
The maximum peak current with in the varistor voltage change ratio of ±10% with the standard 8/20㎲ impulse current applied two times at 5 minute interval.

• Rated transient energy : Wtm

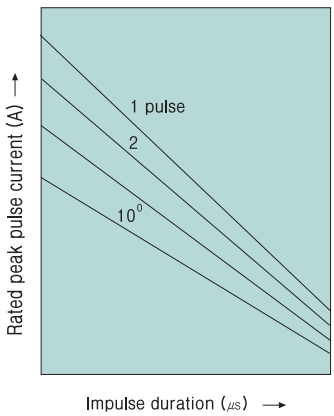
Maximum allowable energy for a single impulse of 2ms square-wave current waveform with rated continuous voltage applied. Maximum energy rating base on a shift of Vnom of less than ±10% of initial value.



Waveshape of square-wave current

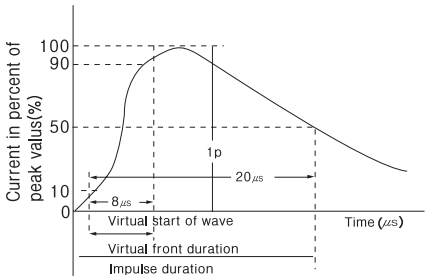
• Pulse lifetime rating

This is expressed as the maximum allowable number of impulse currents applied.
8/20㎲ impulse current (or 2ms square wave) is applied at prescribed interval.
This curve also provides for derating current as required with repetitive pulsing.



• Tset current waveform

Characteristics tests for Varistors are carried out by using 8/20㎲ test impulses Data such as the maximum clamping voltage(Vc)and the transient peak current(Itm) are obtained by using this impulse current.
However, for the Vc characteristics of the Axial package type a 10mA DC squarewave current is used to cary out the test.



• Rated RMS Voltage : Vacm

Maximum continuous sinusoidal RMS voltage at 50/60Hz which may be applied.

• Rated DC Voltage : Vdcm

Maximum continuous DC voltage which may be applied.

• Rated average power dissipation : Ptam

Maximum average power that can be applied within the specified ambient temperature.
