

Product Description

Sirenza Microdevices' SXA-289 amplifier is a high efficiency GaAs Heterojunction Bipolar Transistor (HBT) MMIC housed in low-cost surface-mountable plastic package. These HBT MMICs are fabricated using molecular beam epitaxial growth technology which produces reliable and consistent performance from wafer to wafer and lot to lot.

These amplifiers are specially designed for use as driver devices for infrastructure equipment in the 5-2000 MHz cellular, ISM, WLL and narrowband PCS applications.

Its high linearity makes it an ideal choice for multi-carrier as well as digital applications.

SXA-289

5-2000 MHz Medium Power GaAs HBT Amplifier

Product Features

- Patented High Reliability GaAs HBT Technology
- High Output 3rd Order Intercept : +41.5 dBm typ. at 1960 MHz
- Surface-Mountable Power Plastic Package

Applications

- PCS, Cellular Systems
- High Linearity IF Amplifiers

Absolute Maximum Ratings

Parameter	Absolute Limit
Max. Supply Current (I_b)	200 mA
Max. Device Voltage (V_b)	6.0 V
Max. Power Dissipation	1500 mW
Max. RF Input Power	100 mW
Max. Junction Temp. (T_j)	+165 °C
Operating Lead Temp. (T_l)	-40 to +85 °C
Max. Storage Temp.	+150 °C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:
 $I_b V_b (max) < (T_j - T_l) R_{\theta j-l} H$

ESD: Class 1A (Passes 250V ESD Pulse)

Appropriate precautions in handling, packaging and testing devices must be observed.

Part Symbolization

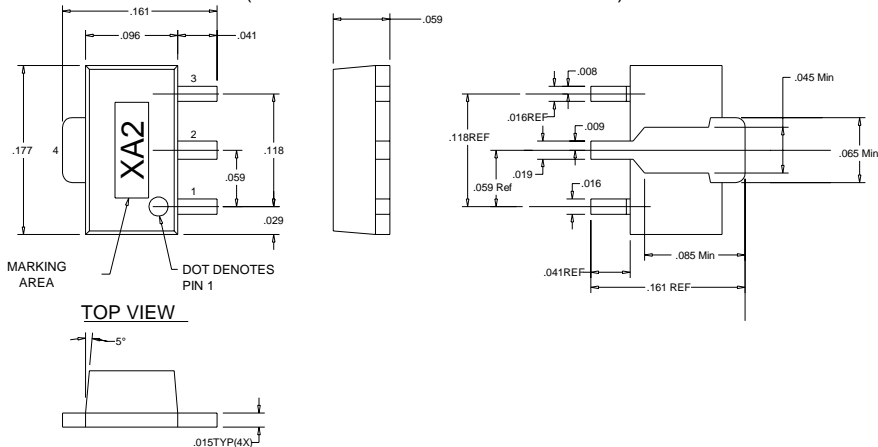

The part will be symbolized with a "XA2" designator on the top surface of the package.

Pin Description

Pin #	Function	Description
1	Base	Base Pin
2	GND & Emitter	Connection to ground. Use via holes to reduce lead inductance. Place vias as close to ground leads as possible.
3	Collector	Collector Pin
4	GND & Emitter	Same as Pin 2
