## Pinout (SOT23-6 top view)

**Top Mark: CAxyz for SY7208    BLxyz for sy7208B**

(Device code: CA for SY7208 and BL for SY7208B, x=year code, y=week code, z=Wafer lot number code)

Pin Name	SOT23-6	Pin Description
IN(SY7208)	5	Input pin. Decouple this pin to GND pin with 1uF ceramic cap.
IN1,2(SY7208B)	6,5	Input pins. Decouple this pin to GND pin with 1uF ceramic cap.
GND	2	Ground pin
LX	1	Inductor node. Connect an inductor between IN pin and LX pin.
FB	3	Feedback pin. Connect a resistor R1 between V <sub>OUT</sub> and FB, and a resistor R2 between FB and GND to program the output voltage: V <sub>OUT</sub> =0.6V*(R1/R2+1)—SY7208; V <sub>OUT</sub> =1V*(R1/R2+1)—SY7208B.
SS (SY7208B)	4	External softstart pin. Add a capacitor to this pin to program the softstart time to limit the inrush current. For SY7208B, pull this pin to IN can disable the input OVP.
EN (SY7208)	4	Enable control. High to turn on the part. Don't leave it floated.

**Note 1:** Stresses listed as the above “Absolute Maximum Ratings” may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.

**Note 2:**  $\theta_{JA}$  is measured in the natural convection at  $T_A = 25^\circ C$  on a low effective single layer thermal conductivity test board of JEDEC 51-3 thermal measurement standard.

**Note 3:** The device is not guaranteed to function outside its operating conditions.
