High Efficiency, Fast Response, 2.0A, 18V Input Synchronous Step Down Regulator

General Description

The SY81052 is a high efficiency, synchronous step-down DC/DC converter capable of delivering 2A load current. The SY81052 operates over a wide input voltage range from 4.2V to 18V and integrates main switch and synchronous switch with very low $R_{DS(ON)}$ to minimize the conduction loss.

The SY81052 adopts the instant PWM architecture to achieve fast transient responses for high step down applications and high efficiency at light loads. In addition, it operates at pseudo-constant frequency of 500kHz to minimize the size of inductor and capacitor.

Pin Name	Pin Number	Pin Description
BS	1	Boot-strap pin. Supply high side gate driver. Connect a 0.1μF ceramic capacitor between the BS and the LX pin.
GND	2	Power ground pin.
FB	3	Output feedback pin. Connect this pin to the center point of the output resistor divider (as shown in Figure 1) to program the output voltage: $V_{OUT}=0.6\times(1+R_H/R_L)$.
EN	4	Enable control. Pull high to turn on. Do not leave this pin floating.
IN	5	Input pin. Decouple this pin to the GND pin with at least a 10μF ceramic capacitor.
LX	6	Inductor pin. Connect this pin to the switching node of inductor.

Note 1: Stresses beyond the "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note 2: θ_{JA} is measured in the natural convection at T_A = 25°C on a 2OZ two-layer Silergy evaluation board. Paddle of SOT23-6 package is the case position for SY81052 θ_{JC} measurement.

Note 3: The device is not guaranteed to function outside its operating conditions.
