General Description

The SiI9244 Silicon Image Mobile High-definition Link (MHL™) Transmitter facilitates the design of low ball count, low-power mobile HD video output applications. It implements MHL technology that uses a single twisted pair and 5 pins of a mobile connector to carry formatted video and audio to MHL-capable receivers. MHL signals are readily converted to a standard HDMI signal through a MHL-to-HDMI bridge when needed.

Silicon Image Mobile High-definition Link products use the latest generation of TMDS core technology. With this ultra-low-power solution, mobile phones, HD camcorders, digital still cameras, and personal mobile devices can connect to a large installed base of HDMI TVs.

HDMI Interface

- HDMI serial link receiver interface
- HDMI-to-MHL transcode mode
- CEA/EIA 861D video format up to 1920x1080p @ 24/30 fps
- Maximum input frequency 75 MHz.

Additional Features

- 1 MHz local I²C bus
- Standard part covers extended (–30 to +85 °C) temperature range.

Features

The SiI9244 transmitter and a MHL-to-HDMI bridge together meet the HDMI compliance test specification.

- The transmitter sends all data and clock signals over a single differential pair
- A single-wire control bus supports all sideband signaling for DDC, remote control, and HPD
