1. General Description

This specification applies to the 26.0 inch Color TFT-LCD Module T260XW02. This LCD module has a TFT active matrix type liquid crystal panel 1366x768 pixels, and diagonal size of 26.0 inch. This module supports 1366x768 XGA-WIDE mode (Non-interlace).

Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot.

The T260XW02 has been designed to apply the 8-bit 1 channel LVDS interface method. It is intended to support displays where high brightness, wide viewing angle, high color saturation, and high color depth are very important.

* General Information

Items	Specification	Unit	Note
Active Screen Size	26.0	inches	
Display Area	575.769 (H) x 323.712(V)	mm	
Pixel Pitch	0.4215	mm	
Outline Dimension	626.0 (H) x 373.0 (V) x 47.5(D)	mm	With inverter
Driver Element	a-Si TFT active matrix		
Display Colors	16.7M	Colors	
Number of Pixels	1366 x 768	Pixel	
Pixel Arrangement	RGB vertical stripe		
Display Mode	Normally Black		
BL Structure	8 U-Lamps	3	
Surface Treatment	AG, 3H	7/5	
Green	RoHS compliance	1-7

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Item	Symbol	Min	Max	Unit	Conditions
Logic/LCD Drive Voltage	V_{CC}	-0.3	6.0	[Volt]	Note 1
LVDS Option Control Voltage	$V_{LVDSOPT}$	-0.3	3.6	[Volt]	Note 1
BLU Input Voltage	VDDB	-0.3	27.0	[Volt]	Note 1
BLU Brightness Control Voltage	BLON	-0.3	7.0	[Volt]	Note 1
External Analog Dimming Control Voltage	VDIM	-0.3	6.0	[Volt]	Note 1
On/Off Control Voltage	V_{BLON}	-0.3	6.0	[Volt]	Note 1
External PWM Dimming Control Voltage	EV_{PWM}	-0.3	6.0	[Volt]	Note 1
Operating Temperature	TOP	0	+50	[°C]	Note 2
Operating Humidity	HOP	10	90	[%RH]	Note 2
Storage Temperature	TST	-20	+60	[°C]	Note 2
Storage Humidity	HST	10	90	[%RH]	Note 2
Panel Surface Temperature			65	[°C]	

Note 1: Duration = 1 sec

Note 2: Maximum Wet-Bulb should be 39°C and No condensation.

3. Electrical Specification

The T260XW02 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the BLU, is to power inverter.

3-1 Electrical Characteristics

Parameter	Symbol		Values		Unit	Notes
1 at afficiet	Symbol	Min.	Typ.	Max.	Omt	Notes
LCD:						
Power Supply Input Voltage	V_{cc}	4.5	5.0	5.5	V	
Power Supply Input Current	Icc	-	1.40	1.78	A	1
Power Consumption	Pc	-	7.0	9.0	Watt	1
Inrush Current	I_{RUSH}	-	-	5.0	A	2
Backlight Power Consumption	PDDB	-	-	94.8	Watt	3
Life Time		50,000	60,000		Hours	4

Note:

- 1. Vcc=5.0V, Fv=60Hz, FDclk= 85.0 MHz, 25°C., Test Pattern: White Pattern
- 2. Vcc rising time = $470 \, \text{ms}$, Vcc= $5.0 \, \text{V}$
- 3. Refer to page 11
- 4. The performance of the Lamp in LCM, for example: lifetime or brightness, is extremely influenced by the characteristics of the DC-AC Inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD Assembly should be operated in the same condition as installed in your instrument.
- 5. Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to conducting tape, TFT-LCD Module have a low luminance and the inverter has abnormal action because leakage current occurs between lamp wire and conducting tape.
- 6. The relative humidity must not exceed 80% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C. When operate at low temperatures, the brightness of CCFL will drop and the lifetime of CCFL will be reduced.

3-2 Interface Connections

- LCD connector (CN1): JAE FI-E30S

3-3 Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for its proper operation.

* Timing Table

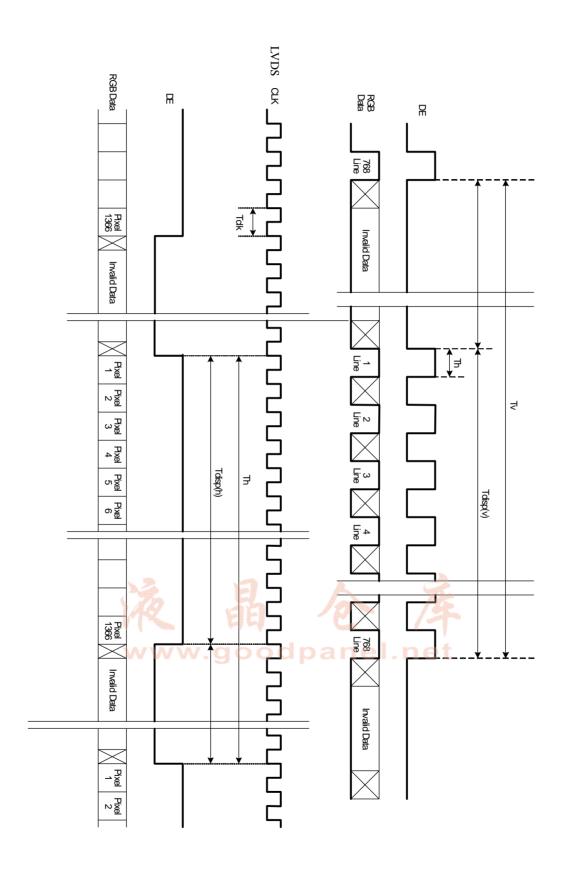

DE only Mode Vertical Frequency

Signal	Item	Symbol	Min.	Тур.	Max.	Unit
Vertical	Period	Tv	784	806	1015	Th
Section	Active	Tdisp(v)		768		Th
Section	Blanking	Tblk (v)	16	38	247	Th
Horizontal	Period	Th	1414	1560	2000	Tclk
Section	Active	Tdisp(h)		Tclk		
Section	Blanking	Tblk (h)	48	194	634	Tclk
LVDS Clock	Frequency	Foclk (1/Tclk)	65	76	88	MHz
Vertical Frequency	Frequency	Fv	44	-1	66	Hz
Horizontal Frequency	Frequency	Fh	40		53	kHz

- 1. Display position is specific by the rise of DE signal only.
- 2. Horizontal display position is specified by the rising edge of 1st Clock after the rise of DE, is displayed on the left edge of the screen.
- 3. Vertical display position is specified by the rise of DE after a "Low" level period equivalent to eight times of horizontal period. The 1st data corresponding to one horizontal line after the rise of DE is displayed at the top line of screen.
- 4. If a period of DE "High" is less than 1366 Clock or less than 768 lines, the rest of the screen displays black.
- 5. The display position does not fit to the screen if a period of DE "High" and the effective data period do not synchronize with each other.

www.goodpanel.net

3-5 Color Input Data Reference

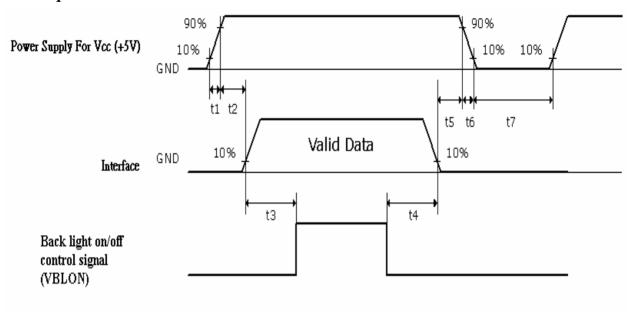

The brightness of each primary color (red, green and blue) is based on the 8 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

COLOR DATA REFERENCE

											Inp	ut	Co	lor	Da	ta

3-6 Power Sequence for LCD

Parameter		Units		
rarameter	Min.	Typ.	Max.	Units
t1	0.4	-	20	ms
t2	20	-	50	ms
t3	700or (200)*1	-	-	ms
t4	10	-	-	ms
t5	1	-	50	ms
t6		-	300	ms
t7	1	-	-	S

^{*1:} If t3=200ms, input black signal till 700ms from system is necessary.

In case of t3<200ms, the abnormal display will be happened. But it will not damage timing controller.

Note:

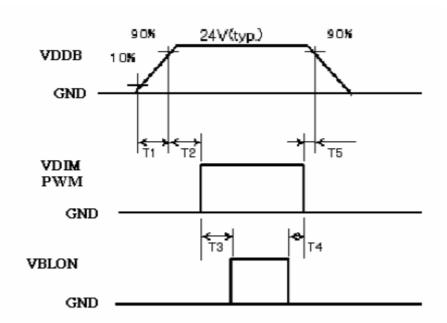

The timing controller will not be damaged in case of TV set AC input power suddenly shut down.

Once power reset, it should follow power sequence as spec. definition.

(1) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become abnormal screen.

3-7 Power Sequence for Inverter

Parameter		Values			
rarameter	Min.	Typ.	Max.	Units	
T1	20	-	-	ms	
T2	50	-	-	ms	
Т3	50	-	-	ms	
T4	50	-	-	ms	
T5	0	-	-	ms	

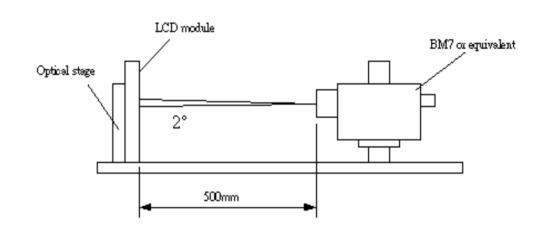

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 45 minutes in a dark environment at 25° C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0° . Following data are measured at condition Vcc=5.0V, Fv=60Hz, FDclk=76MHz, VDDB=24.0V, VDIM=3.3V, EDPWM=100%.

Fig.1 1 presents additional information concerning the measurement equipment and method.

Parameter		Symbol	Values			Units	Notes
		Symbol	Min.	Тур.	Max.	Units	Notes
Contrast Ratio (center of screen)		CR	800	1000			1
Surface L	uminance, white	L255	400	450		cd/m²	2

	BLUE	$\mathbf{B}_{\mathbf{X}}$	тур0.03	0.150	Typ.+0.03		
	DLCE	B_{Y}		0.060			
	WHITE	W_{X}		0.280			
	WILLE	$ m W_{ m Y}$		0.290			
Viewing Angle							
ļ	s, right(φ=0°)	$\theta_{ m r}$		88		Degree	
}	s, left(φ=180°)	θ_{l}		88		Degree	6
I L	s, up(φ=90°)	θ_{u}		88		Degree	
y axis	s, down (φ=0°)	$\theta_{ m d}$		88		Degree	

Note:

1. Contrast Ratio (CR) is defined mathematically as:

Contrast Ratio=
$$\frac{L_{255 \text{ of P5}}}{L_{0 \text{ of P5}}}$$

- 2. Surface luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. From more information see FIG 2.
- 3. The variation in surface luminance, δ_{WHITE} is defined (center of Screen) as:

$$\delta_{WHITE(9P)} = Maximum(L_{on1}, L_{on2}, ... L_{on9}) / Minimum(L_{on1}, L_{on2}, ..., L_{on9})$$

- 4. Response time is the time required for the display to transition from black to white (Rise Time, Tr_R) and from white to black (Decay Time, Tr_D). For additional information see FIG3.
- 5. Ty is the response time between any two gray scale and is based on $f_v=60$ Hz to optimize.
- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG4.

FIG. 2 Surface luminance- Definition of test point

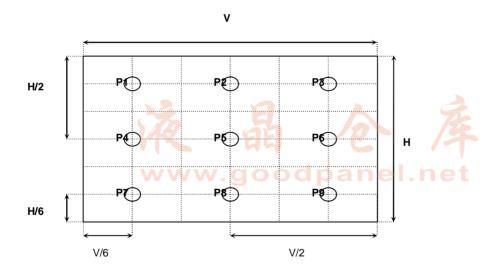

FIG.3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

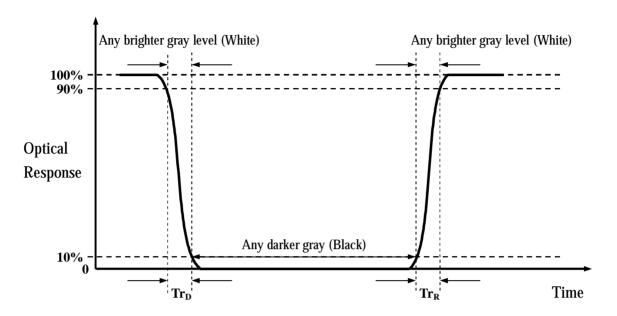

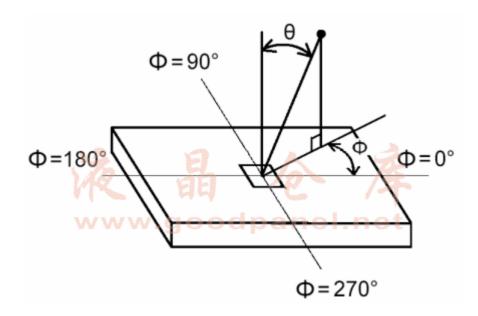

FIG.4 Viewing angle

5. Mechanical Characteristics

{ Result Evaluation Criteria }

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

Note

- 1. 1000H is for reference
- 2. 200cycles is for reference
- 3. Image Sticking Test Mode
- (a) Driving Method: Normal operation
- (b) Display Pattern:

P1: 10X10 Black & White Check Pattern

P2: Gray Luster (Gray level 128.)

- (c) Test Procedure
 - A. Turn to testing pattern (10X10 Black & White Check Pattern) and keep lighting-on 2hrs.
 - B. Change to gray pattern. Then visually observe if an objectionable persisting shadow exists or not.
- (d) Judge Criteria: No distinguished Mura compared with original pattern

Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.

(3) EN60950: 1992+A2: 1993+A2: 1993+C3: 1995+A4: 1997+A11: 1997

IEC 950: 1991+A1: 1992+A2: 1993+C3: 1995+A4:1996

European Committee for Electrotechnical Standardization (CENELEC)

EUROPEAN STANDARD for Safety of Information Technology Equipment Including Electrical Business Equipment.

7-2. EMC

- a) ANSI C63.4 "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHz to 40GHz. "American National standards Institute(ANSI), 1992.
- b) C.I.S.P.R "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." International Special committee on Radio Interference.
- c) EN 55022 "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." European Committee for Electrotechnical Standardization. (CENELEC), 1998.

7-3. Green

Green Mark Description:

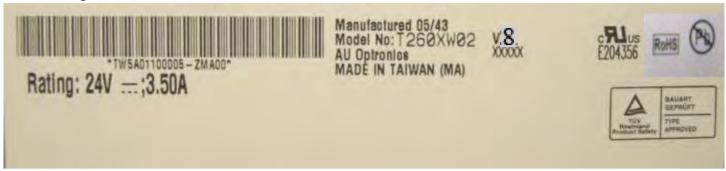

- a) For Pb Free products, AUO will add for identification.
- b) For RoHS compatible products, AUO will add for identification.

Note. The Green Mark will be present only when the green documents have been ready by AUO Internal Green Team. (The definition of green design follows the AUO green design checklist.)

Packing

Label sample

TW5A01100005-ZMA00*

TW5A011: Production lot, T: Taiwan made, M: China made

00005: Panel serial number ZMA: AUO internal code

Manufactured 05/43: 2005 week 43

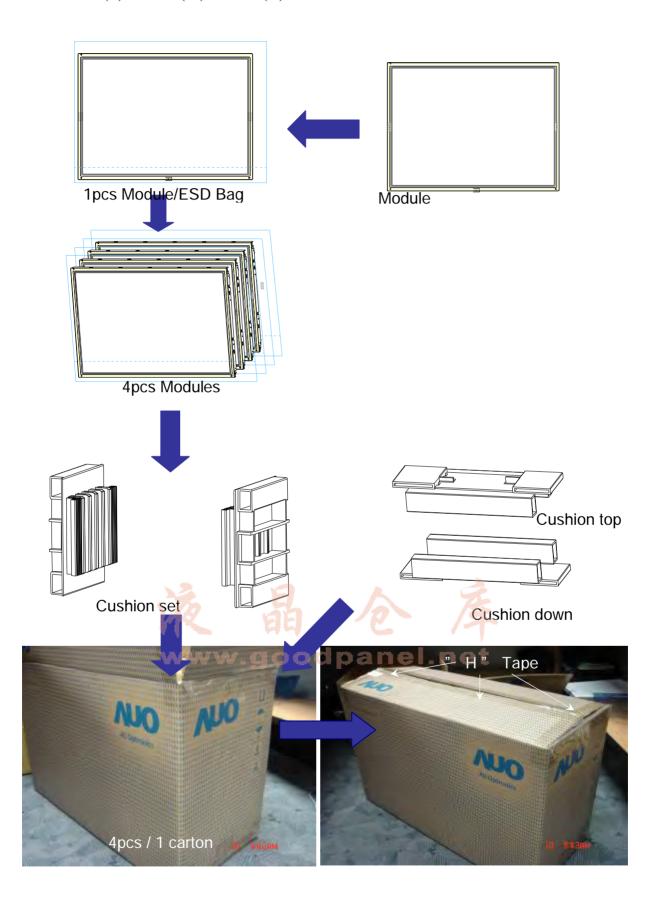

Made in Taiwan: Taiwan made

Carton Label

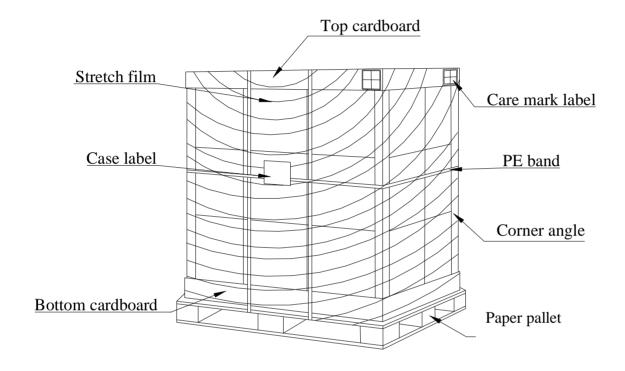

Carton Size 768(L)mm*330(W)mm*480(H)mm

Shipment Data

	Item	Specification			Packing Remark
	Item	Qty.	Oty. Dimension Weight (k		- racking Remark
1	Packing BOX	4pcs/box	768(L)mm*324(W)mm*480(H)mm	20	
2	Pallet	1	990(L)mm*780(W)mm*120(H)mm		
3	Boxes per Pallet	9 boxes/Pa			
4	Panels per Pallet	36pcs/palle	6pcs/pallet		
	Pallet after packing	36	990(L)mm*780(W)mm*1560(H)mm	190	

PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1 MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2 OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=±200mV(Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer..)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

9-3 ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5 STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5° C and 35° C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6 HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of flue still on the Bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
