1. General Description

This specification applies to the 37.0 inch Color TFT-LCD Module T370XW02 VC02. This LCD module has a TFT active matrix type liquid crystal panel 1366x768 pixels, and diagonal size of 37.0 inch. This module supports 1366x768 XGA-WIDE mode (Non-interlace).

Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot.

The T370XW02 VC02 has been designed to apply the 8-bit 1 channel LVDS interface method. It is intended to support displays where high brightness, wide viewing angle, high color saturation, and high color depth are very important.

The T370XW02 VC02 model is RoHS verified which can be distinguished on panel label.

* General Information

Items	Specification	Unit	Note
Active Screen Size	37.02 inches		
Display Area	819.6 (H) x 460.8(V)	mm	
Outline Dimension	877.0(H) x 514.6(V) x 54.3(D)	mm	With inverter
Driver Element	a-Si TFT active matrix		
Display Colors	16.7M	Colors	
Number of Pixels	1366 x 768	Pixel	
Pixel Pitch	0.51075	mm	
Pixel Arrangement	RGB vertical stripe		
Display Mode	Normally Black		
Surface Treatment	Anti-Glare, 3H		Haze = 11%

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause permanent damage to the unit.

Item	Symbol	Min	Max	Unit	Conditions
Logic/LCD Drive Voltage	Vcc	-0.3	14	[Volt]	Note 1
Input Voltage of Signal	Vin	-0.3	4	[Volt]	Note 1
BLU Input Voltage	VDDB	-0.3	27	[Volt]	Note 1
BLU Control Voltage	BLon	-0.3	7.0	[Volt]	Note 1
Operating Temperature	TOP	0	+50	[^{o}C]	Note 2
Operating ambient Humidity	HOP	10	90	[%RH]	Note 2
Storage Temperature	TST	-20	+60	[^{o}C]	Note 2
Storage Humidity	HST	10	90	[%RH]	Note 2
Panel Surface Temperature	PST		65	[^{o}C]	Note 3

Note:

1. Duration:50 msec.
2. Maximum Wet-Bulb should be 39℃ and No condensation.

   The relative humidity must not exceed 90% non-condensing at temperatures of 40℃ or less. At

   temperatures greater than 40℃, the wet bulb temperature must not exceed 39℃.
3. Surface temperature is measured at 50℃ Dry condition

# 3. Electrical Specification

The T370XW02 VC02 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the Backlight, is to power inverter.
3-1 Electrical Characteristics

Parameter			Values			Unit	Notes
			Min	Typ	Max		
LCD:							
Power Supply Input Voltage		Vcc	10.8	12	13.2	Vdc	1
Power Supply Input Current		Icc	-	0.38	0.66	A	2
Power Consumption		Pc	-	5.76	7.92	Watt	2
Inrush Current		I_{RUSH}	-	-	4	Apeak	3
LVDS Interface	Differential Input High Threshold Voltage	VTH			100	mV	4
	Differential Input Low Threshold Voltage	VTL	-100			mV	4
	Common Input Voltage	VCIM	1.10	1.25	1.40	V	4
CMOS Interface	Input High Threshold Voltage	VIH (High)	2.4		3.3	Vdc	
	Input Low Threshold Voltage	VIL (Low)	0		0.7	Vdc	
Backlight Power Consumption		PDDB	112	124	136	Watt	
Life Time			50,000			Hours	

Note :

1.　The ripple voltage should be controlled under 10% of V_{CC}

2.　Vcc=12.0V, $f_v = 60Hz$, fCLK=81.5Mhz , 25℃, Test Pattern : White Pattern

3.　Measurement condition :

VIL

0V

5. The performance of the Lamp in LCD panel, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC Inverter. So all the parameters of an inverter should be carefully designed as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. After confirmation, the LCD panel should be operated in the same condition as installed in your instrument.

6. Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to conducting tape, TFT-LCD Module have a low luminance and the inverter has abnormal action because leakage current occurs between lamp wire and conducting tape.

7. The relative humidity must not exceed 80% non-condensing at temperatures of 40℃ or less. At temperatures greater than 40℃, the wet bulb temperature must not exceed 39℃. When operate at low temperatures, the brightness of CCFL will drop and the life time of CCFL will be reduced.

3-3 Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

* Timing Table

DE only Mode

Vertical Frequency:

Signal	Item	Symbol	Min.	Type.	Max.	Unit
Vertical Section	Period	Tv	784	806	1015	Th
	Active	Tdisp(V)		768		Th
	Blanking	Tblk(V)	8	42	247	Th
Horizontal Section	Period	Th	1414	1648	2000	Tclk
	Active	Tdisp(H)		1366		Tclk
	Blanking	Tblk(H)	48	282	634	Tclk
LVDS Clock	Frequency	1/Tclk	50	80	86	MHz
Vertical Frequency	Frequency	Freq.	47	60	63	Hz
Horizontal Frequency	Frequency	Freq.	43	48	53	KHz

Notes:

1.　Display position is specific by the rise of DE signal only.

2.　Horizontal display position is specified by the rising edge of 1st DCLK after the rise of 1st DE, is displayed on the left edge of the screen.

3.　Vertical display position is specified by the rise of DE after a "Low" level period equivalent to eight times of horizontal period. The 1st data corresponding to one horizontal line after the rise the of 1st DE is displayed at the top line of screen.

4.　If a period of DE "High" is less than 1366 DCLK or less than 768 lines, the rest of the screen displays black.

5.　The display position does not fit to the screen if a period of DE "High" and the effective data period do not synchronize with each other.

　　　T370XW02 VC02 Ver0.0

3-4 Signal Timing Waveforms
3-5 Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 8 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

COLOR　DATA　REFERENCE

Color		Input Color Data																							
		RED MSB LSB								GREEN MSB LSB								BLUE MSB LSB							
		R7	R6	R5	R4	R3	R2	R1	R0	G7	G6	G5	G4	G3	G2	G1	G0	B7	B6	B5	B4	B3	B2	B1	B0

3-6 Power Sequence
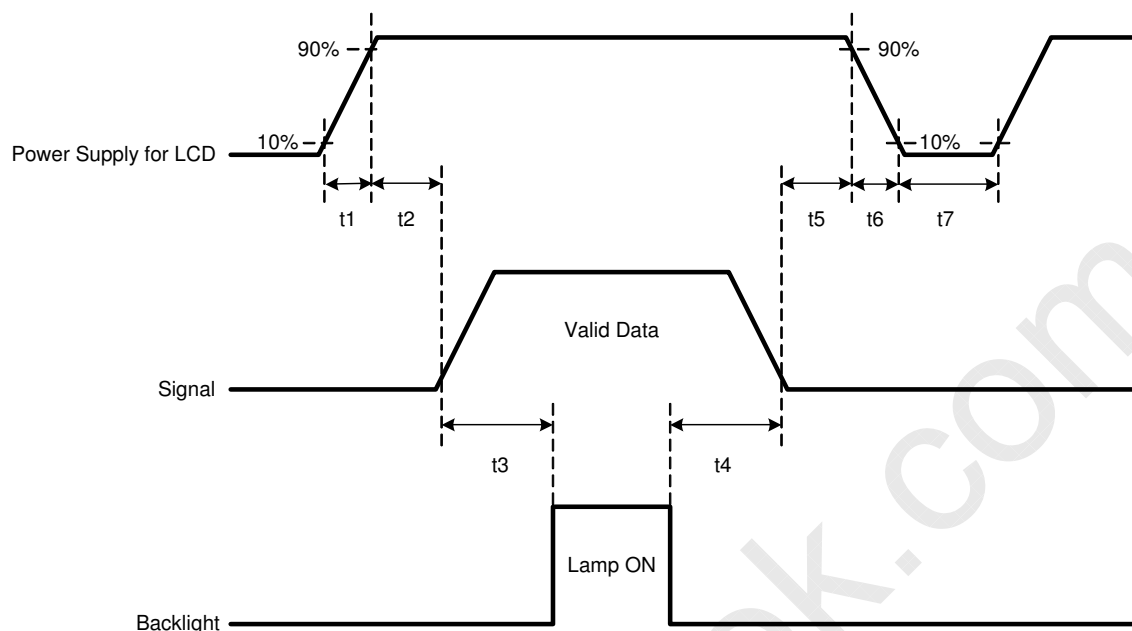

Parameter	Values			Units
	Min.	Typ.	Max.	
t1	0.4	-	30	ms
t2	0.1	-	50	ms
t3	200	-	-	ms
t4	10	-	-	ms
t5	0.1	-	50	ms
t6		-	300	ms
t7	500	-	-	ms

Note:

The timing controller will not be damaged in case of TV set AC input power suddenly shut down. Once power reset, it should follow power sequence as spec. definition.

Apply the lamp voltage within the LCD operation range. When the backlight turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become abnormal screen.

3-7 Backlight Power Specification for LCD Module

Electrical specification

Item	Symb.		Condition	Spec			Unit	Note
				Min	Typ	Max		
Input Voltage	VDDB		---	21.6	24.0	26.4	VDC	
Input Current	IDDB		VDDB=24V		5.17	5.5	ADC	1
Input Power	PDDB		VDDB=24V		124	136	W	1
Inrush Current	IRUSH		VDDB=24V	---	---	8.5	ADC	1,2
On/Off Control Voltage	VBLON	ON	VDDB=24V	2.0	---	5.0	VDC	
		OFF	VDDB=24V	0.0	---	0.8		
On/Off Control Current	IBLON		VDDB=24V	0.0	---	1.5	mADC	
Dimming Control Voltage	VDIM	MAX	VDDB=24V	---	3.3	---	VDC	
		MIN	VDDB=24V	---	0.0	---		
Dimming Control Current	I_DIM	MIN	VDDB=24V	---	---	1.5	mADC	
Internal Dimming Ratio	DIM_R		---	20		100	%	
PWM Function	V_PWM	MAX	---	3.3	---	5.0	VDC	
		MIN	---	0.0	---	0.8		
External PWM Control Current	I_EPWM		---	---	---	1.5	mADC	
External PWM Ratio **(Duty)**	D_EPWM		---	10	---	100	%	3
External PWM Frequency	F_EPWM		---	120	180	300	Hz	

（Ta=25±5℃, Turn on for 45minutes）

Note

1. VDIM= 3.3V (MAX)

2. Measurement condition Rising time = 20 ms (VDDB : 10%~90%);

3. (a) Uniformity and flicker do not guarantee below 20% dimming control.

    (b) 10% dimming control is function okay and no backlight shut down

T5	0	-	-	Ms
T6	-	-	10	Ms

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 45 minutes in a dark environment at 25℃. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θequal to 0°.

Fig.1 1 presents additional information concerning the measurement equipment and method.
Parameter		Symbol	Values			Units	Notes
			Min.	Typ.	Max.		
Contrast Ratio		CR	2400	3000			1
Surface Luminance, white		LWH	360	450		cd/㎡	2
Luminance Variation		δ$_{WHITE}$ 9 p			1.30		3
Response time	G to G	Tγ		6.5	8	ms	4
Color Gamut		NTSC		72		%	
Color Coordinates							
	RED	R$_X$		0.64			
		R$_Y$		0.33			
	GREEN	G$_X$		0.29			
		G$_Y$	Typ.-0.03	0.60	Typ.+0.03		
	BLUE	B$_X$		0.15			
		B$_Y$		0.06			
	WHITE	W$_X$		0.28			
		W$_Y$		0.29			
Viewing Angle							
x axis, right(φ=0°)		θ$_r$		89		degree	5
x axis, left(φ=180°)		θ$_l$		89			
y axis, up(φ=90°)		θ$_u$		89			
y axis, down (φ=0°)		θ$_d$		89			

Note:

1. Contrast Ratio (CR) is defined mathematically as:

$$\text{Contrast Ratio} = \frac{\textbf{Surface Luminance of } L_{on5}}{\textbf{Surface Luminance of } L_{off5}}$$

Surface luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. From more information see FIG 2. When VDDB = 24V, IDDB = 5A, L_{WH}=Lon5, where Lon5 is the luminance with all pixels displaying white at center 5 location.

2. The variation in surface luminance, δWHITE is defined (center of Screen) as:

$$\delta_{WHITE(9P)} = \text{Maximum}(L_{on1}, L_{on2}, \ldots, L_{on9}) / \text{Minimum}(L_{on1}, L_{on2}, \ldots L_{on9})$$

3. Response time Tγ is the average time required for display transition by switching the input signal for five luminance ratio (0%,25%,50%,75%,100% brightness matrix) and is based on f_v=60Hz to optimize.

	0%	25%	50%	75%	100%
0%		t:0%-25%	t:0%-50%	t:0%-75%	t:0%-100%
25%	t:25%-0%		t:25%-50%	t:25%-75%	t:25%-100%
50%	t:50%-0%	t:50%-25%		t:50%-75%	t:50%-100%
75%	t:75%-0%	t:75%-25%	t:75%-50%		t:50%-100%
100%	t:100%-0%	t:100%-25%	t:100%-50%	t:100%-75%	

4. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG4.
FIG. 2 Luminance

The response time is defined as the following figure and shall be measured by switching the input signal for "any level of gray(bright) " and "any level of gray(dark)".

Any level of gray(Bright)   Any level of gray(Dark)   Any level of gray(Bright)
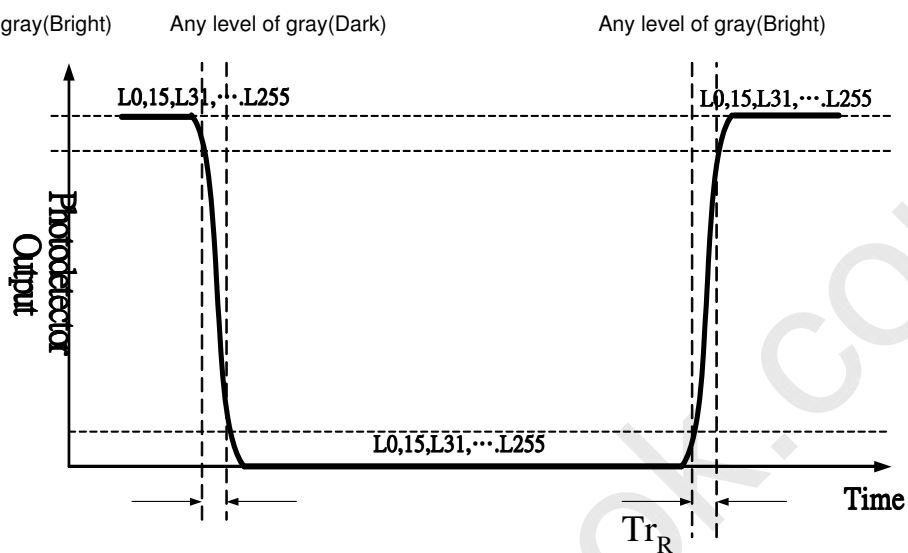

FIG.3 Response Time
FIG.4 Viewing angle

5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model T370XW02 VC02. In addition the figures in the next page are detailed mechanical drawing of the LCD.

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1 MOUNTING PRECAUTIONS

(1) You must mount a module using holes arranged in four corners or four sides.

(2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.

(3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.

You should adopt radiation structure to satisfy the temperature specification.

Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.

(4) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)

(5) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.

(6) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.

(7) Do not open the case because inside circuits do not have sufficient strength.

9-2 OPERATING PRECAUTIONS

(1). The device listed in the product specification sheets was designed and manufactured for TV application

The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=±200mV(Over and under shoot voltage)

(2). Response time depends on the temperature. (In lower temperature, it becomes longer..)

Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.

(3)   Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.

(4)   When fixed patterns are displayed for a long time, remnant image is likely to occur.

(5) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

9-3 ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5 STORAGE＋

When storing modules as spares for a long time, the following precautions are necessary.

(1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5℃ and 35℃ at normal humidity.

(2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6 HANDLING PRECAUTIONS FOR PROTECTION FILM

(1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.

(2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of flue still on the Bezel after the protection film is peeled off.

(3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

Appendix - A

Item	Min	Typ	Max	Unit
EMI level (Note)	---	---	-6	dB(μV/m)
SSCG	---	300	---	ps

1. EMI specification

Model name: T370XW02 VC02

Note:
(2) Criteria: CISPR22
(3) Signal generator: PSG400 (Sony EMCS)
(4) EMI site: Sony EMCS Ichinomiya Tec. or using correlation value
(5) Find result should be checked by connecting with TV-set
