

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

# TA1201AN

## I<sup>2</sup>C BUS CONTROL NTSC 1CHIP COLOR TV IC

TA1201AN provides PIF, SIF, Video, Chroma and Deflection circuit for NTSC Color TV. TA1201AN also provides Audio-Video Switch and Text interface. TA1201AN combine these functions in a 56pin dual-in-line shrink-type plastic package. TA1201AN realizes rationalization of various alignments and controls by bus control system.

### FEATURES

#### PIF Circuit

- PLL Type IF Demodulation (Bus alignment)
- Adjustment Free AFT without Tank Coil
- RF AGC Output (Delay point : Bus alignment)
- Dual Time Constant Fast AGC

#### Video Circuit

- Black Stretcher
- DC Restoration Circuit
- D.L. Aperture Compensate Circuit (Bus Control)
- Internal Filter Auto-adjust Circuit (Fsc link type)
- Uni-color Circuit (Bus control)
- 3.58MHz Trap Filter Circuit (Bus on / off)
- Y Delay Line Circuit

#### Chroma Circuit

- Color Control Circuit (Bus control)
- Tint Control Circuit (Bus control)
- B.P.F./T.O.F. Circuit (Bus select)
- Included ACC/Killer Filter

#### SIF Circuit

- Inter Carrier SIF System
- External Sound Select Switch (Bus select)
- Attenuator Circuit (Bus control)

Weight : 5.55g (Typ.)

#### TEXT Circuit

- Linear RGB Input
- Cut Off / Drive Adjustment (Bus adjustment)
- RGB Primary Color Output

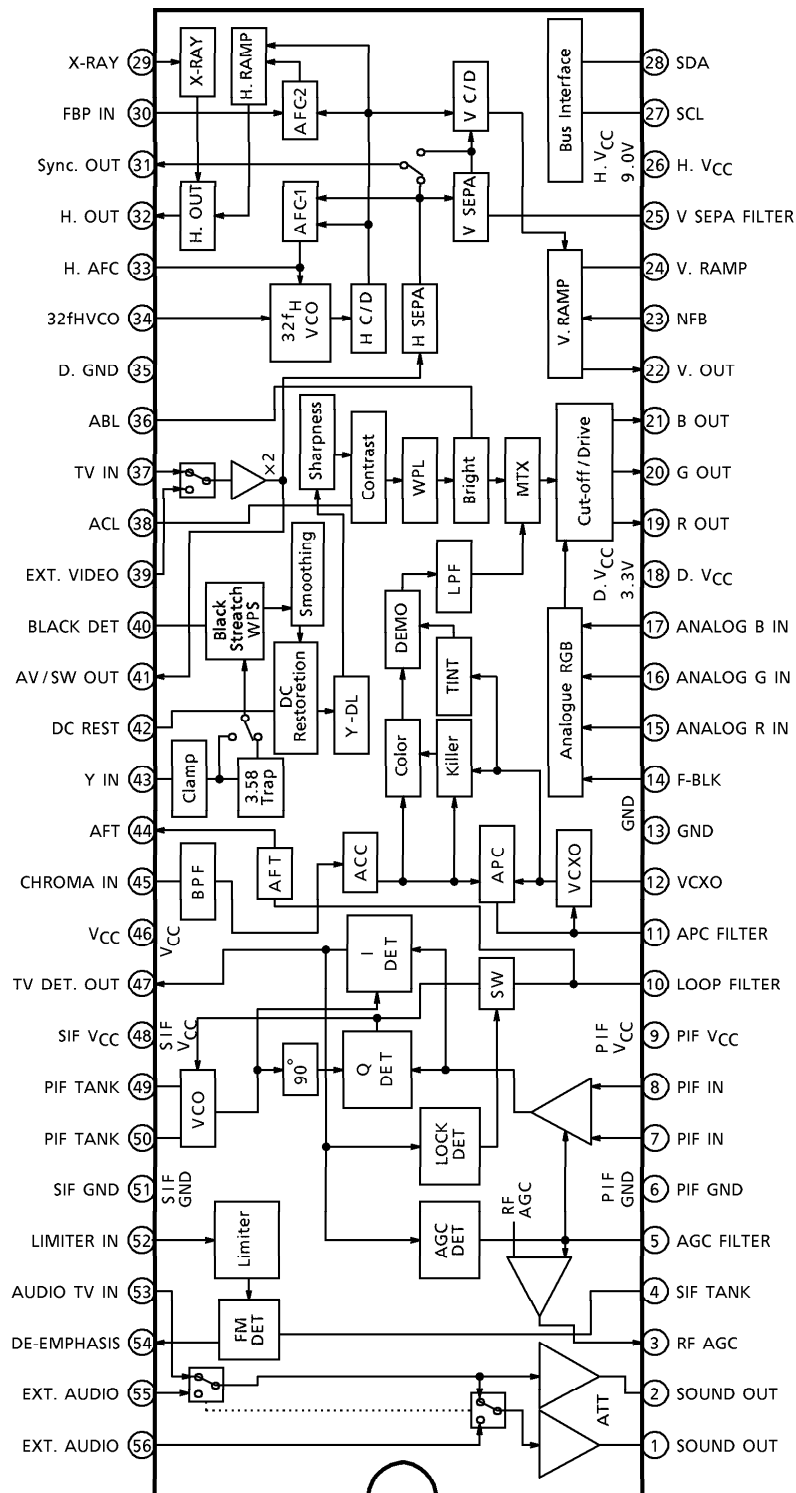

#### Deflection Circuit

- Auto-slicer Type High Performance Sync. Separation Circuit
- Adjustment Free Countdown System
- Sync. Separation Output
- X-ray Protect Circuit
- Vertical Ramp Output
- Dual Time Constant AFC Circuit
- Horizontal and Vertical Position Adjustment (Bus adjustment)
- Vertical Amplitude Adjustment (Bus adjustment)

961001EBA2

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to foreign exchange and foreign trade control laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

BLOCK DIAGRAM

**TERMINAL FUNCTION**

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
1 2	Sound Output	This terminal is for Sound Output. The maximum flow out current of these terminals is 3.6mA. So, the minimum load resistor is 1kΩ.	
3	RF AGC	This terminal is for RF AGC output.	
4	SIF Tank Coil	This terminal is for connecting SIF detect tank coil. This terminal is for Sound Mute Switch, too. If this terminal is connected to GND, the sound output is muted.	
5	AGC Filter	This terminal is for PIF 2nd AGC filter.	
6	PIF GND	This terminal is for GND of PIF circuit.	—
7 8	PIF Input	This terminal is for IF input. The typical input value is 90dBµV.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
9	PIF V <sub>CC</sub>	This terminal is for V <sub>CC</sub> of PIF circuit.	—
10	Loop Filter	This terminal is for PIF PLL loop filter.	
11	APC Filter	This terminal is for APC filter of f <sub>sc</sub> oscillation.	
12	VCXO	This terminal is for X'tal of 3.58MHz VCXO.	
13	GND	This terminal is for V/C/D GND.	—
14	Fast Blanking	This terminal is for fast blanking of RGB input.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
15 16 17	Analog RGB Input	These terminals are for RGB signal input.	
18	Digital VCC	This terminal is for VCC of digital circuit.	—
19 20 21	RGB Output	These terminals are for RGB primary color signal output.	
22	Vertical Output	This terminal is for vertical pulse output.	
23 24	NFB, Vertical Ramp.	These terminals are for NFB input and vertical ramp output.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
25	Vertical Sync. Separation Filter	This terminal is for vertical sync. separation filter.	
26	H. V <sub>CC</sub>	This terminal is for V <sub>CC</sub> of horizontal circuit.	—
27 28	SCL, SDA	These terminals are for input and output of I <sup>2</sup> C Bus.	
29	X-RAY	This terminal is for input of X-RAY protect circuit. The threshold voltage is 3.5V (Typ.). If this terminal is applied the voltage that is more than threshold voltage, the X-RAY protect circuit make horizontal output a low.	
30	Fly-back Pulse Input	This terminal is for Fly-back Pulse input. The Fly-back Pulse is the reference of AFC circuit, gate pulse and so on. The current needs to keep under 1mA.	
31	Sync. Pulse Output	This terminal is for Sync. pulse output.	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
32	Horizontal Output	This terminal is for horizontal pulse output.	
33	H. AFC	This terminal is for horizontal AFC filter. The AFC circuit fits the phase between inputted horizontal sync. signal and horizontal pulse which is made by countdowning 32f <sub>H</sub> .	
34	32f <sub>H</sub> VCO	This terminal is for connecting ceramic oscillator. That constitutes 32f <sub>H</sub> (503kHz) oscillation circuit. The CSB503F30 (Murata) is recommended.	
35	D. GND	This terminal is for GND of digital circuit.	—
36	A.B.L.	This terminal is for A.B.L. circuit.	
37	TV Input	This terminal is for input of PIF detected signal. The typical input amplitude is 1.0V <sub>p-p</sub> .	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
38	A.C.L.	This terminal is for ACL circuit.	<p>The diagram shows a transistor circuit. The input terminal (38) is connected to the base of a transistor through a 1kΩ resistor. The base is also connected to a 100 μA current source. The emitter is connected to ground through a 100 μA current source. The collector is connected to a 3.4V supply through a 10kΩ resistor. The output terminal (46) is connected to the collector through a 10kΩ resistor. There are also two diodes connected to the input and output lines.</p>
39	External Video Input	This terminal is for input of external video signal.	<p>The diagram shows a differential amplifier stage. The input terminal (39) is connected to the base of one of two transistors. The other base is connected to ground through a resistor. The emitters are connected to a common emitter resistor which is connected to ground through a current source. The collectors are connected to a 3.4V supply through resistors. The output terminal (46) is connected to the collector of the top transistor. There are also two diodes connected to the input and output lines.</p>
40	Black Peak Detection	This terminal is for filter of black peak detection.	<p>The diagram shows a transistor circuit. The input terminal (40) is connected to the base of a transistor through a 3.3kΩ resistor. The base is also connected to a feedback loop consisting of an 8kΩ resistor and a 1kΩ resistor. The emitter is connected to ground through a 2.8kΩ resistor. The collector is connected to a 3.4V supply through a 1.8kΩ resistor. The output terminal (46) is connected to the collector. There are also two diodes connected to the input and output lines.</p>
41	Video Switch Output	This terminal is for output of video switch which selects TV signal or external video. Amp. Gain ; Min. 1.7 Typ. 1.9, Max. 2.1	<p>The diagram shows a transistor circuit. The input terminal (41) is connected to the base of a transistor through a 50Ω resistor. The base is also connected to a feedback loop consisting of a 100Ω resistor and a 200Ω resistor. The emitter is connected to ground through a 75 μA current source. The collector is connected to a 3.4V supply through a resistor. The output terminal (46) is connected to the collector. There are also two diodes connected to the input and output lines.</p>
42	D.C. Restoration	This terminal is for filter of APL detection.	<p>The diagram shows a differential amplifier stage. The input terminal (42) is connected to the base of one of two transistors through a 2kΩ resistor. The other base is connected to ground through a 3kΩ resistor. The emitters are connected to a common emitter resistor which is connected to ground through a current source. The collectors are connected to a 3.4V supply through 2.5kΩ resistors. The output terminal (46) is connected to the collector of the top transistor. There are also two diodes connected to the input and output lines.</p>

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT															
43	Y Input	This terminal is for Y signal input. The typical input amplitude is 1.0V <sub>p-p</sub> .																
44	A.F.T.	This terminal is for AFT output. Monitor signal output mode can be selected via Bus. <table border="1" data-bbox="518 907 901 1115"> <thead> <tr> <th>B<sub>0</sub></th> <th>B<sub>1</sub></th> <th>OUTPUT</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>0</td> <td>AFT</td> </tr> <tr> <td>0</td> <td>1</td> <td>TEST purpose only</td> </tr> <tr> <td>1</td> <td>0</td> <td>B</td> </tr> <tr> <td>1</td> <td>1</td> <td>RFAGC / 2</td> </tr> </tbody> </table>	B <sub>0</sub>	B <sub>1</sub>	OUTPUT	0	0	AFT	0	1	TEST purpose only	1	0	B	1	1	RFAGC / 2	
B <sub>0</sub>	B <sub>1</sub>	OUTPUT																
0	0	AFT																
0	1	TEST purpose only																
1	0	B																
1	1	RFAGC / 2																
45	Chroma Input	This terminal is for chrominance signal input. The typical input signal amplitude is 286mV <sub>p-p</sub> (at burst signal). This IC is to go to test mode with this terminal voltage higher than 4.5V.																
46	V/C/D V <sub>CC</sub>	This terminal is for V <sub>CC</sub> of video, Chroma and Deflection circuit.	—															
47	TV Detection Output	This terminal is for PIF detected signal output.																
48	S.I.F. V <sub>CC</sub>	This terminal is for V <sub>CC</sub> of SIF circuit.	—															

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
49 50	P.I.F. Tank Coil	<p>These terminals are for connecting a tank coil of PIF detection circuit.                      TOKO Corp. products 292GJAS-7475BS (45.75MHz), 292GJAS-7476BS (58.75MHz) are recommended.</p>	
51	S.I.F. GND	<p>This terminal is for GND of SIF circuit.</p>	<p style="text-align: center;">—</p>
52	Limiter Input	<p>This terminal is for input of SIF limiter amplifier circuit.</p>	
53	TV Audio Signal Input	<p>This terminal is for input of SIF detected signal. This terminal is connected to pin 54 via capacitor.</p>	
54	De-emphasis	<p>This terminal is for filter of SIF de-emphasis.</p>	
55 56	External Audio Input	<p>These terminals are for external audio input.</p>	

Slave Address : 88H

**I<sup>2</sup>C BUS CONTROLLED FORMAT SUMMARY**

Bus controlled format of TA1201AN is based on I<sup>2</sup>C Bus Control format of Philips.

**Data Transfer Format**

S : Start Condition  
 P : Stop Condition  
 A : Acknowledge

**(1) Start and Stop Condition**

**(2) Bit Transfer**

**(3) Acknowledge**

**(4) Slave Address**

A6	A5	A4	A3	A2	A1	A0	R/W
1	0	0	0	1	0	0	0

Purchase of TOSHIBA I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

## MAXIMUM RATINGS (Ta = 25°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Power Supply Voltage	V <sub>CC</sub>	12	V
Power Dissipation	P <sub>Dmax</sub>	2.19 (Note1)	W
Input Terminal Voltage	V <sub>in</sub>	GND - 0.3 ~ V <sub>CC</sub> + 0.3	V
Input Signal Amplitude	e <sub>in</sub>	4	V <sub>p-p</sub>
Operating Temperature	T <sub>opr</sub>	-20 ~ 65	°C
Storage Temperature	T <sub>stg</sub>	-55 ~ 150	°C

(Note1) When using the device at above Ta = 25°C, decrease the power dissipation by 17.5mW for each increase of 1°C.

(Note2) As this IC is weak in a surge voltage, handle it with care from being damage.

## RECOMMENDED OPERATING CONDITION
