

TOSHIBA BIPOLAR LINEAR INTEGRATED CIRCUIT SILICON MONOLITHIC

TA8851BNG,TA8851CNG

AUDIO / VIDEO SWITCH IC FOR TV WITH S-TERMINALS

The TA8851BNG / CNG is an A / V SWITCH IC, which has 7 input channels and 2 output channels. Because the 2 output channels can be switched independently of each other, the TA8851BNG / CNG allows you to configure a PIP system input switching circuit easily.

The TA8851BNG / CNG can be interfaced easily to a microcontroller via the I²C bus.

3 of 7 input channels can be used for Y / C separated input.

Weight: 5.44 g (Typ.)

FEATURES

● Video Stage

• Input

Composite video input : 7 channels
Y / C input : 3 channels

• Output

Composite video output : 2 channels (Main and Sub)
Y / C output : 2 channels (Main and Sub)

● Audio Stage

• Input

L / R input : 7 channels

• Output

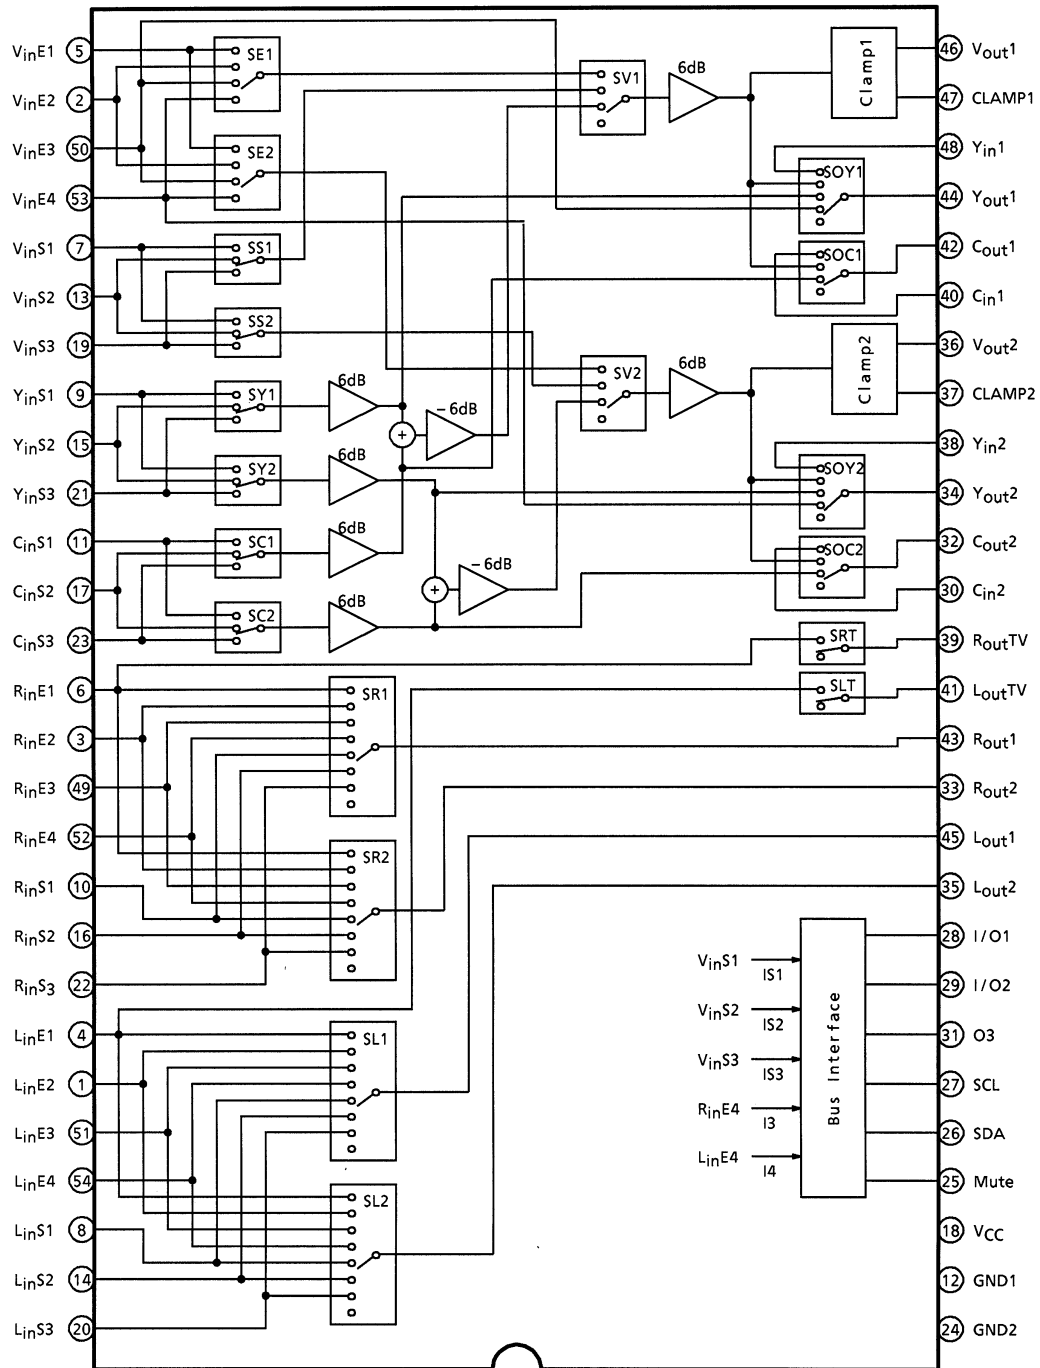

L / R output : 3 channels (2 of 3 depend on video, and the other is selectable from Main or Sub)

● Functions

- I²C bus interface
- External mute circuit
- DAC output (3 outputs)
- Video clamp circuit
- Mode output
- ADC input (4 inputs)

TERMINAL FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
2 : V_{inE2} 5 : V_{inE1}	Composite Video Signal Input	These pins are for composite video signal input. The recommendable input level is 1.0V _{p-p} .	
50: V_{inE3} 53: V_{inE4}	Composite Video Signal / Y Signal Input	These pins can be used for composite video signal or Y signal input. The recommendable input level is 1.0V _{p-p} .	
7 : V_{inS1} 13: V_{inS2} 19: V_{inS3}	Composite Video Signal Input and S-Mode Switch	These pins are for composite video signal input and S mode Switch. By setting DC voltage of one of these pins lower than 2.6V, that channel (S1, S2 or S3) turns to S-mode. And when it is higher than 2.6V, that pin is for composite video input. The recommendable input level is 1.0V _{p-p} .	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
9 : Y _{in} S1 15: Y _{in} S2 21: Y _{in} S3 11: C _{in} S1 17: C _{in} S2 23: C _{in} S3	Y Signal Input / C Signal Input	These pins accept a Y signal from the S-terminal and a C signal as input. The recommended input signal level is 1.0V _{p-p} for Y signal and 300mV _{p-p} for C signal (burst).	
4 : L _{in} E1 6 : R _{in} E1	Audio Input (TV)	These pins accept the sound of the internal TV signal as input. The signal input to this pin is output from the main / sub output after being selected, as well as from the TV audio output terminal. The recommended input signal level is 300mV _{rms} .	
52: R _{in} E4 54: L _{in} E4	Audio Input / ADC Input	These pins accept an audio signal as input. They also accept input from a 1bit ADC. In this case, if the voltage on these pins is below 2.3V the ADC outputs I ₃ and I ₄ become logic is. The recommended input signal level is 300mV _{rms} .	
8 : L _{in} S1 10: R _{in} S1 14: L _{in} S2 16: R _{in} S2 20: L _{in} S3 22: R _{in} S3 1 : L _{in} E2 3 : R _{in} E2 51: L _{in} E3 49: R _{in} E3	Audio Input	These pins accept an audio signal as input. The recommended input signal level is 300mV _{rms} .	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
25: Mute	Mute	If the voltage on this pin is above 1.5V, all audio outputs (main, sub, and TV) are disabled.	
46: V _{out1} 36: V _{out2}	Monitor Output	These pins output the selected composite signal. The standard output signal amplitude is 2.0V _{p-p} . These pins can sink a maximum current of 3.0mA.	
47: CLAMP1 37: CLAMP2	Clamp Filter	These pins are a filter terminal for the clamp circuit to maintain the monitor output at a constant DC level. If these pins are tied to GND, the clamp circuit is disabled, so that the DC voltage of the monitor output cannot be clamped to a constant level.	
48: Y _{in1} 40: C _{in1} 38: Y _{in2} 30: C _{in2}	Comb Y / C Input	These pins accept a Y / C separated signal from the comb filter as input. The recommended input signal level is 2.0V _{p-p} for Y signal and 600mV _{p-p} for C signal (burst).	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
44: Y _{out1} 42: C _{out1} 34: Y _{out2} 32: C _{out2}	Y / C Output	These pins output the Y and C signals that are fed to the V / C / D circuits. The standard output signal level is 2.0V _{p-p} for Y signal and 600mV _{p-p} for C signal (burst). These pins can sink a maximum current of 2.5mA.	
28: I / O1 29: I / O2	I / O	These pins are for input and output to and from the 1bit DAC / ADC of the bus signal. These pins can source a maximum current of 2.0mA.	
31: O3	O3	This pin is for output of the 1bit DAC of the bus signal. This pin can source a maximum current of 2.0mA.	
26: SDA 27: SCL	SCL / SDA	These pins are for input of the I ² C bus.	
33: R _{out2} 35: L _{out2} 39: R _{outD} / R _{outTV} 41: L _{outD} / L _{outTV} 43: R _{out1} 45: L _{out1}	Audio Output	These pins output an audio signal. These pins can sink a maximum current of 1.4mA.

PACKAGE DIMENSIONS

SDIP54-P-600-1.78

Unit : mm

Weight: 5.44 g (Typ.)

About solderability, following conditions were confirmed

- Solderability

- (1) Use of Sn-63Pb solder Bath

- solder bath temperature = 230°C
 - dipping time = 5 seconds
 - the number of times = once
 - use of R-type flux

- (2) Use of Sn-3.0Ag-0.5Cu solder Bath

- solder bath temperature = 245°C
 - dipping time = 5 seconds
 - the number of times = once
 - use of R-type flux

RESTRICTIONS ON PRODUCT USE

030619EBA

- The information contained herein is subject to change without notice.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
