

TC4055BP LIQUID-CRYSTAL DISPLAY DRIVER

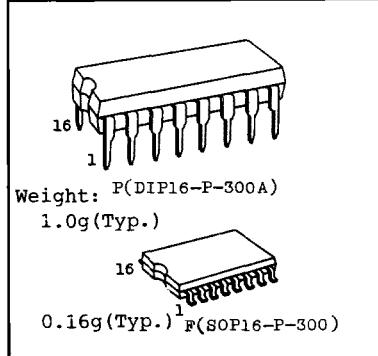

(BCD TO 7-Segment Decoder/Driver with "Display-Frequency" Output)

TC4056BP/TC4056BF LIQUID-CRYSTAL DISPLAY DRIVER

(BCD TO 7-Segment Decoder/Driver with Strobed-Latch Function)

TC4055BP, TC4056BP/BF are LC drivers which drive the field effect type liquid crystal with seven segments by BCD input.

If DF input="L", a selected output among segment outputs of a through g becomes "H" level and if DF input="H", a selected output becomes "L" level. Seven segment liquid crystal element can be directly driven by applying the pulse in-phase with DF input to the common terminal (back plane) of liquid crystal. TC4055BP is equipped with DF output for the common terminal and TC4056BP/BF is equipped with the latch. If V_{EE}<V_{SS}, the level conversion operation which lowers only "L" side of logical signal can be achieved.
