TC7MA373FK

LOW-VOLTAGE OCTAL D-TYPE LATCH WITH 3.6 V TOLERANT INPUTS AND OUTPUTS

The TC7MA373FK is a high performance CMOS OCTAL D-TYPE LATCH. Designed for use in 1.8, 2.5 or 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation.
It is also designed with over voltage tolerant inputs and outputs up to 3.6 V.
This 8 bit D-type latch is controlled by a latch enable input (LE) and a output enable input ($\overline{OE}$).
When the $\overline{OE}$ input is high, the eight outputs are in a high impedance state.
All inputs are equipped with protection circuits against static discharge.
