The Proposal of Outer Circuit for Tax Rate Holding with Back-Up Battery

Note 8: $V_1 = 3\text{ V}$: Battery supply

$V_2 = 5\text{ V}$: AC supply

(~HOLD pin is pulled down in the LSI, but normally pulled up to VDD.)
 (~RESET pin is pulled up to VDD.)

- (1) Setting POWER SW to ON, V_2 is supplied to VDD pin, and also to HOLD pin.
Then calculator operates normally.
- (2) Setting POWER SW from ON to OFF, V_1 is supplied to VDD pin and VSS is supplied to HOLD pin.
Under this connection, TAX RATE is held.
- (3) Setting POWER SW to ON, V_2 is supplied to VDD pin, and also to HOLD pin.
Then calculator operates normally with TAX RATE to be held.

Note 9: V_1 (battery) should be supplied to the circuit after V_2 (AC) supply, because of prevention from exhaustion of battery and abnormal operation.
