Warning

1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This data sheet defines the specification for a 640×(R.G.B)×480 dot, amorphous silicon TFT transmissive color dot matrix type Liquid Crystal Display with LED backlight. 『RoHS Compliant』

2. Construction and Outline

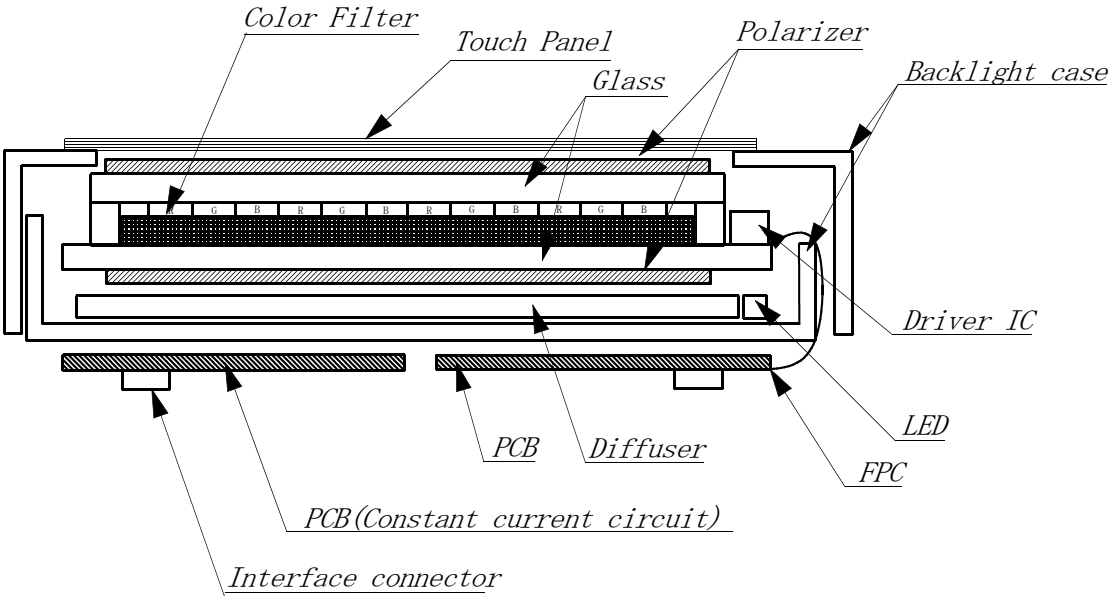
640×(R.G.B)×480 dots, COG type LCD with LED backlight.

Backlight system : Side-edge type (LED).

Polarizer : Glare treatment.

Additional circuits : Timing controller, Power supply (3.3V input)
Constant current circuit for LED backlight.

Touch Panel : Analog type. Non-Grare treatment.



This drawing is showing conception only.

3. Mechanical Specifications

3-1. Mechanical Specifications of LCD

ITEM	SPECIFICATION	UNIT
Outline dimensions	184 (W) × 139.8 (H) × 14.45 (D)	mm
Effective viewing area	153.7 (W) × 115.8 (H)	mm
Dot number	640×(R.G.B) (W) × 480 (H)	Dots
Dot pitch	0.079 (W) × 0.237 (H)	mm
Display mode *1	Normally white	—
Mass	(TBD)	g

*1 Due to the characteristics of the LCD material, the color vary with environmental temperature.

3-2. Mechanical Specifications of touch panel

ITEM	SPECIFICATION	UNIT

*1 Operating temperature means a temperature which operation shall be guaranteed.
Since display performance is evaluated at 25 deg.C, another temperature range should be confirmed.

*2 Temp. = -30 ℃ < 48 h , Temp = 80 ℃ < 168 h
Store LCD panel at normal temperature/humidity.
Keep it free from vibration and shock.
LCD panel that is kept at low or high temperature for a long time can be defective due to the other conditions, even if the temperature satisfies standard.
(Please refers to ″ Precautions for use″ as detail).

*3 Non-condensation.

*4 Temp. ≦ 40 deg.C, 85%RH Max.
Temp. > 40 deg.C, Absolute Humidity shall be less than 85% RH at 40 deg.C.

* In case of lower frequency, the deterioration of the display quality, flicker etc., may occur.

8-2. Horizontal display position

The horizontal display position is determined by ENAB signal.

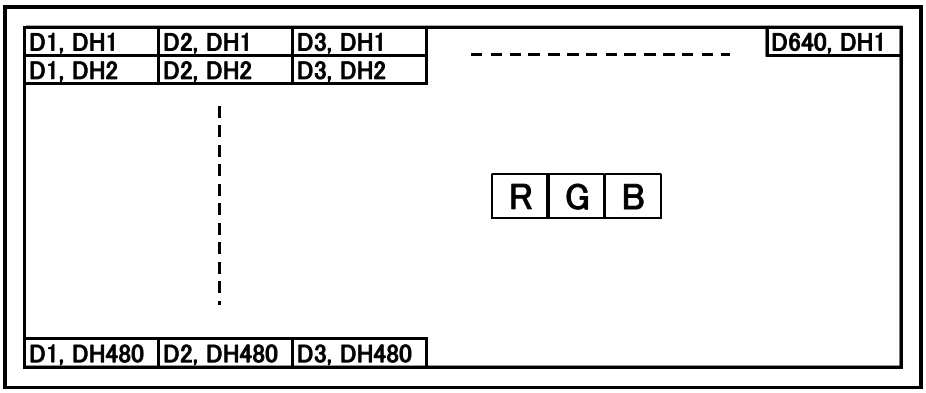
*When ENAB is fixed at "Low," the display starts from the data of C104(clock) as shown in 8-5.

8-3. Vertical display position

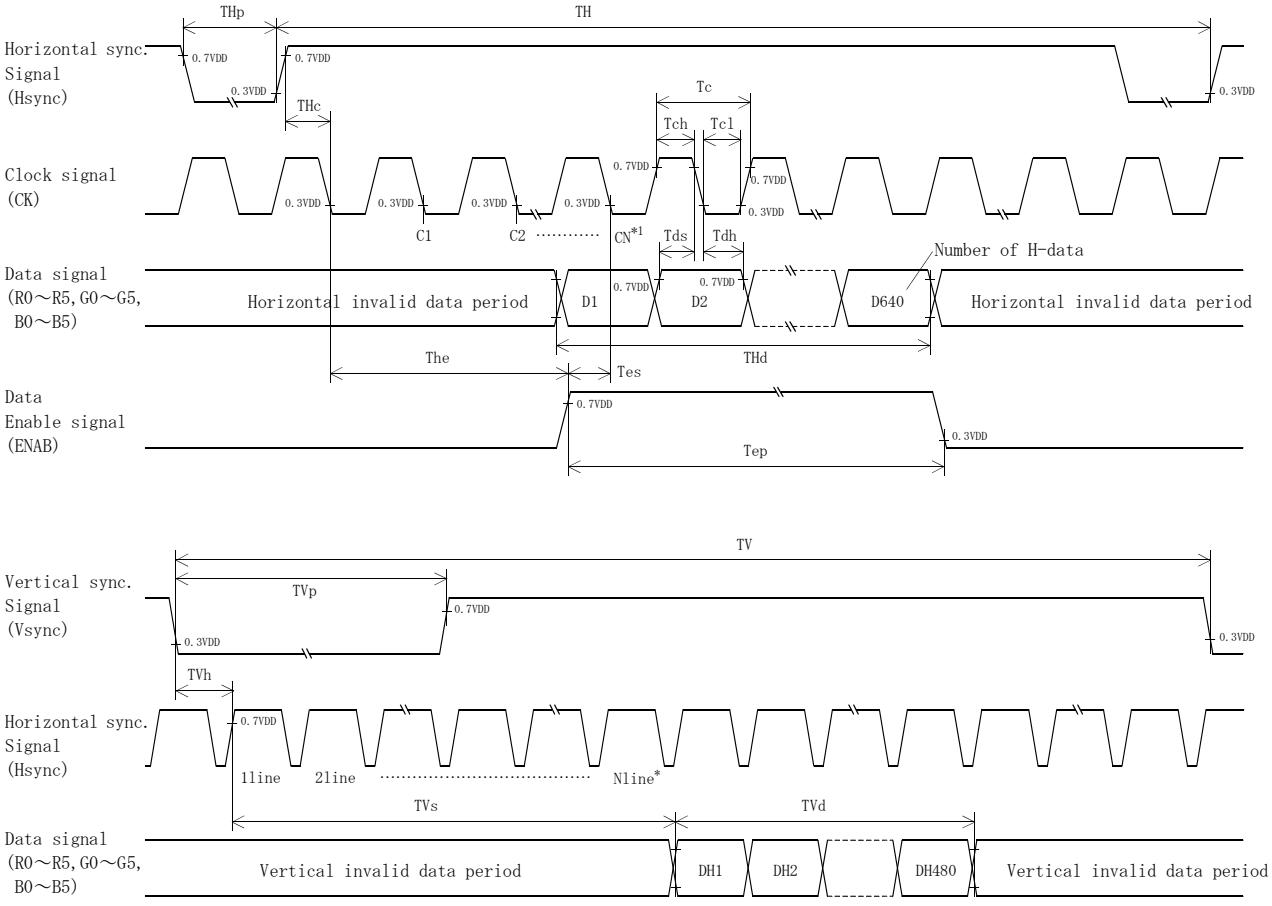
The vertical display position (TVs) is fixed at 34th line.

Note) ENAB signal is independent of vertical display position.

8-4. Input Data Signals and Display position on the screen



8-5. Input Timing Characteristics



*1 When ENAB is fixed "Low" the display starts from the data of C104(Clock).

*2 The vertical display position(TVs) is fixed at 34th line.

9. Backlight Characteristics

9-1. LED Backlight Characteristics

*1 For each "AN1-CA1", "AN2-CA2", "AN3-CA3" and "AN4-CA4".

*2 A forward current below 8.0mA may reduce the brightness uniformity of the LED backlight. This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully before finalizing the input current.

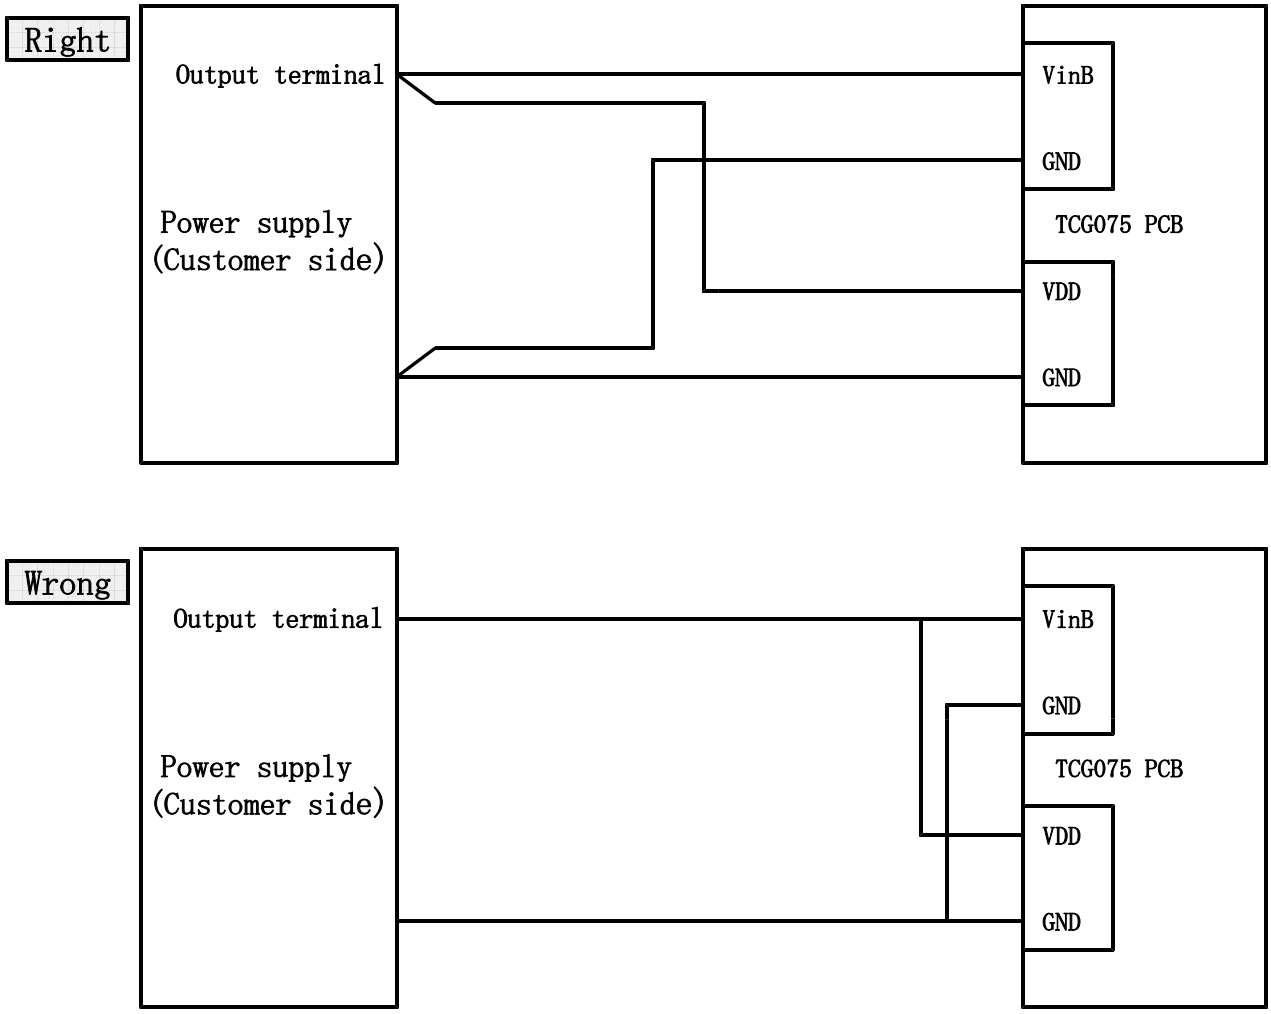
*3 When surface brightness decreases 50% of initial brightness .

*4 Life time is estimated data.

*5 When you start-up, please charge in sequence of VinB->BLEN, or VBRT.
When you shut-down, please stop in sequence of BLEN and/or VBRT->VinB.

*6 Please do not connect the other than our backlight to this output connector on the PCB.

*7 In case VDD and VinB are supplied by a single power source, VDD & VinB, and GND are connected directly and separately from the output on the power source. If the common wire are used for VDD & VinB, and for GND, and are split near the PCB, and connect to each LCD driving circuit and backlight driving circuit, a flicker might be occurred due to a ripple between the both circuit.



9-2. VBRT-IF characteristics

１０. Design Guidance for Analog Touch-Panel(T/P)

10-1. Electrical(In customer's design, please remember the following considerations.)

1. Do not use the current regulated circuit.
2. Keep the current limit with top and bottom layer.(Please refer to "Electrical absolute maximum ratings" for details.)
3. Analog T/P can not sense two point touching separately.
4. A contact resistance is appeared at the touch point between top and bottom layer. After this resistance has stable read of the T/P position data.
5. Because noise of inverter or peripheral circuits may interfere signal of touch panel itself it is necessary to design carefully in advance to avoid these noise problem.

10-2. Software

1. Do the "User Calibration".
2. "User Caribration" may be needed with long term using. Include "User Caribration" menu in your software.
3. When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes over a spacer-dot. If necessary, please provide a compensation feature within your software.

10-3. Mounting on display and housing bezel

1. Do not use an adhesive tape to bond it on the front of T/P and hang it to the housing bezel.
2. Never expand the T/P top layer (PET-film) like a balloon by internal air pressure. The life of the T/P will be extremely short.
3. If a dew will be on the heat-sealed area or exposed traces at the end of a flexible tail, the migration of silver can occur. This will cause sometimes a short circuit.

１１．Lot Number Identification

The lot number shall be indicated on the back of the backlight case of each LCD.

１２．Warranty

12-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

12-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

１３. Precautions for use

13-1. Installation of the LCD

1. The LCD's bezel must be grounded. The heat sink is connected at the ground hole.
   The ground hole is located on the right side of the LCD when viewed from the front.
   The ground hole must be connected to an external ground.
2. The LCD shall be installed so that there is no pressure on the LSI chips.
3. The LCD shall be installed flat, without twisting or bending.
4. Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
   Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.
5. Please refer to the following our recommendable value of Clamp-down torque when installing.
   Clamp-down torque : 0.32±0.05N･m
   Please set up'SPEED-LOW,' 'SOFT START-SLOW' when using electric driver.
   Recommendable screw P-TITE screw two types nominal dia.3.0 mm installing boss hole depth 4.2 mm Max
   Please be careful not to use high torque which may damage LCD module in installation.
6. Do not pull the LED lead wires and do not bend the root of the wires.
   Housing should be designed to protect LED lead wires from external stress.
7. This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas.
   Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.

13-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operator should wear ground straps.

13-3. LCD Operation

1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles.
   It may also change the characteristics of the liquid crystal.
   This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

13-4. Storage

1. The LCD shall be stored within normal temperature and humidity.
   Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. Always store the LCD so that it is free from external pressure onto it.

13-5. Screen Surface

1. DO NOT store in a high humidity environment for extended periods.
   Image degradation, bubbles, and/or peeling off of polarizer may result.
2. Do not push or rub the touch panel's surface with hard to sharp objects such as knives, or the touch panel may be scratched.
3. When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistened by mild detergent or alcohol. If a hazardous chemical is dropped on the touch panel by mistake, wipe it off right away to prevent human contact.
4. Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
5. Always keep the LCD free from condensation during testing.
   Condensation may permanently spot or stain the polarizers.
6. Do not disassemble LCD module because it will result in damage.
7. Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend to use screen saver etc. in cases where a solid-base image pattern must be used.
8. Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body, rinse it off right away with water and soap.

* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

* The LCD is tested in circumstances in which there is no condensation.

* The reliability test is not an out-going inspection.

* The results of the reliability test are for your reference purpose only.

* The reliability test is conducted only to examine the LCD's capability.
