1. FEATURES

The 3.5" LCD module is the Transflective active matrix color TFT LCD module. LTPS (Low Temperature Poly Silicon) TFT technology is used and it's COG design. The LCD module includes backlight and TFT LCD panel with minimal external circuits and components required.

2. GENERAL SPECIFICATION

| lte | em | Description | Unit |
|----------------------|-------------|----------------------------------|------|
| Display Size (Diagon | al) | 3.5 inch (8.9cm) | - |
| Display Type | | Transflective | - |
| Active Area (HxV) | | 53.28 X 71.04 | mm |
| Number of Dots (HxV | ') | 240 x RGB x 320 | dot |
| Dot Pitch (HxV) | | 0.074 X 0.222 | mm |
| Color Arrangement | | RGB Stripe | - |
| Color Numbers | | 262,144 (6 bits) | - |
| Outline Dimension (H | lxVxT) | 64.3 X 87.1X2.95(Max 3.15)* | mm |
| Weight | | 35 | g |
| | LCD Panel + | 25 (Тур) | |
| Power consumption | T-CON + L/S | | mW |
| | Backlight | 288 (Typ, I _F = 20mA) | |

* Exclude FPC and protrusions.

| Item | Symbol | MIN | MAX | Unit | Remark |
| Lasia Cumplu Valtana | DVDD | -0.3 | +3.6 | V | |
| Logic Supply Voltage | AVDD | -0.3 | 6 | V | |
| Dower Supply for HA/ Driver | VGH | -0.3 | +19 | V | |
| Power Supply for H/V Driver | VVEE | -5.8 | -5.2 | V | Note 1 |
| Backlight LED forward Voltage | V _F | - | 4 | V | |
| Backlight LED reverse Voltage | V _R | - | 5 | V | |
| Backlight LED forward current | 1 | | 20 | | Note2 |
| (Ta=25) | F | - | 30 | mA | NOLEZ |
| Operating Temperature | Topr | -10 | +60 | | |
| Storage Temperature | Tstg | -20 | +70 | | |

Note1. The operating voltage is between +0.5V and -5.0V at the moment when the power is turned on

Note 2. Relation between maximum LED forward current and ambient temperature is showed as bellow.

Ambient Temperature vs.
 Allowable Forward Current

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

5. ELECTRICAL CHARACTERISTICS

5 1 Driving TET I CD Panel

| 5.1 Driving TFT LC | | T a=25 | | | | | |
|----------------------|----------|--------------------------|---------|------|----------|------|-------------------|
| ltem | | Symbol | MIN | TYP | MAX | Unit | Remark |
| Logio Supply Voltag | | DVDD | 2.4 | 2.8 | 3.3 | V | |
| Logic Supply Voltage | 5 | AVDD | 4.8 | 5 | 5.6 | V | |
| Power Supply for H/ | | VGH | 9.5 | 10 | 10.5 | V | |
| | v Driver | VVEE | -5.8 | -5.5 | -5.2 | V | |
| Logio Input Voltogo | High | VIH | 0.8DVDD | - | DVDD+0.3 | V | R[5:0], G[5:0], |
| Logic Input Voltage | Low | VIL | DVSS | - | 0.2DVDD | V | B[5:0], CLK DE |
| Leakage curre | ent | L | -1 | - | 1 | uA | |
| DVDD Supply Curre | ent | | - | 0.74 | 1.9 | mA | Note 1,2 |
| AVDD Supply Current | | I _{AVDD} | - | 1.65 | 4.0 | mA | Note 3 |
| VGH Supply Current | | I_{VGH} | - | 0.07 | 0.2 | mA | |
| VVEE Supply Curre | nt | I_{VVEE} | - | 0.05 | 0.5 | mA | |

Note 1: The typical supply current specification is measured at the line inversion test pattern (black and white interlacing horizontal lines as the diagram shown below)

Note 2: DVDD rush currents accept 120mA, 500u sec during system booting.

Note 3: Gamma correction voltage is set to achieve the optimum at AVDD=5.0V. Use the voltage at level as close to 5.0V as possible.

5.2 DC/DC Spec

| Item | Input voltage | | Input Current | Input ripple(Max) | | |
|------|---------------|--------|---------------|-------------------|-------|--------|
| | MIN | TYP | MAX | | | |
| DVDD | 2.4V | 2.8V | 3.3V | 0.74 | TBD | |
| AVDD | 4.8V | 5V | 5.6V | 1.65 | 50 mV | Note 1 |
| VGH | 9.5V | 10V | 10.5V | 0.07 | 150mV | |
| VVEE | -5.8 V | -5.5 V | -5.2 V | 0.05 | TBD | |

Note 1: AVDD is analog voltage supply therefore use as less ripple as possible.

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

| Data setup time | tds | | 20 | - | - | ns |
| Data Hold time | tdh | | 20 | - | - | ns |
| Digital logic input | Trise/Tfall | | | | 15 | ns |

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

8. Power On/Off Sequence

Power on sequence:

DVDD & AVDD & Input signal → RESET → VVEE → VGH

Power off sequence:

VGH → VVEE → DVDD & AVDD & Input signal → RESET

(Note 1) Display start at the 10th falling edge of VSYNC after RESET rising (first 1 frame=white) (Note 2) VGH will be pulled up to AVDD-0.7V before VGH power on, due to external schottky diode. (Note 3) To avoid image retention , please input white image for two frame before power off.

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

oppoly

9.2 Basic measure condition

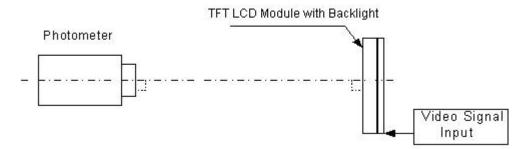

- 9.2.1 Driving voltage:
 - VGH= 10.0V, VVEE= -5.5V
- 9.2.2 Ambient temperature: Ta=25
- 9.2.3 Testing point: measure in the display center point and the test angle =0 °
- 9.2.4 Testing Facility

Environmental illumination: = 1 Lux

A. System A

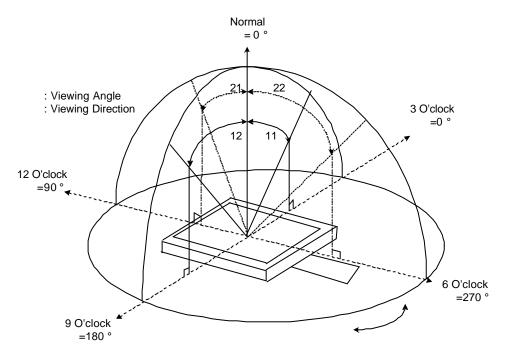

B. System B

Note 9-2: Contrast ratio in back light off (Measure System A)

Contrast Ratio is measured in optimum common electrode voltage.

CR = Luminance with white image Luminance with black image

Note 9-3: White chromaticity as back light off: (Measure System A)

Note 9-4: Reflectivity (R) (Measure System A)

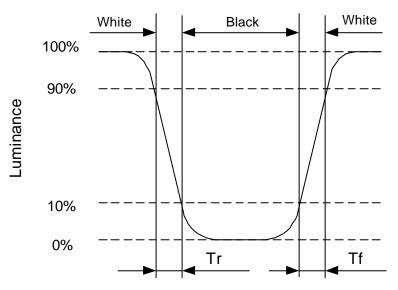

In the measuring system A,. Calculate the reflectance by the following formula.

 $Reflectivity(R) = \frac{Output from the white display panel}{Output from the reflectance standard} X Reflectance factor of reflectance standard$

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

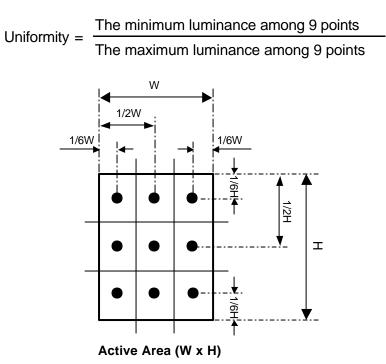

Contrast Ration is measured in optimum common electrode voltage.

CR = Luminance with white image Luminance with black image

Note 9-7: Luminance: (Measure System B) Test Point: Display Center

Note 9-8: Uniformity (Measure System B)

The luminance of 9 points as the black dot in the figure shown below are measured and the uniformity is defined as the formula:

10. Reliability

| No | Test Item | Condition | | | | |
|----|--|---|--|--|--|--|
| 1 | High Temperature Operation | Ta=+60 , 240hrs | | | | |
| 2 | High Temperature & High Humidity Operation | Ta=+40 , 95% RH, 240hrs | | | | |
| 3 | Low Temperature Operation | Ta= -10 , 240hrs | | | | |
| 4 | High Temperature Storage (non-operation) | Ta=+70 , 240hrs | | | | |
| 5 | Low Temperature Storage (non-operation) | Ta= -20 , 240hrs | | | | |
| 6 | | -20 $\leftarrow \rightarrow$ 70 ,30 cycles | | | | |
| 6 | Thermal Shock (non-operation) | 30 min 30 min | | | | |
| | Surface Discharge (nen energian) (I CD | C=150pF, R=330 ; | | | | |
| 7 | Surface Discharge (non-operation) (LCD | Discharge: Air: ±15kV; Contact: ±8kV | | | | |
| | surface) | 5 times / Point; 5 Points / Panel | | | | |
| | | Frequency: 10~55Hz; Amplitude: 1.5mm | | | | |
| 8 | Vibration (non-operation) | Sweep Time: 11min | | | | |
| | | Test Time: 2 hrs for each direction of X, Y, Z | | | | |
| 9 | Shook (non operation) | Acceleration: 100G; Period: 6ms | | | | |
| э | Shock (non-operation) | Directions: $\pm X$, $\pm Y$, $\pm Z$; Cycles: Three times | | | | |

11. Handling Cautions

11.1 ESD (Electrical Static Discharge) strategy

ESD will cause serious damage of the panel, ESD strategy is very important in handling. Following items are the recommended ESD strategy

- 11.1.1 In handling LCD panel, please wear gloves with non-charged material. Using the conduction ring connects wrist to the earth and the conducting shoes to the earth necessary is.
- 11.1.2 The machine and working table for the panel should have ESD protection strategy.
- 11.1.3 In handling the panel, ionized airflow decreases the charge in the environment is necessary.
- 11.1.4 In the process of assemble the module, shield case should connect to the ground.

11.2 Environment

Working environment of the panel should be in the clean room.

11.3 Others

- 11.3.1 Turn off the power supply before connecting and disconnecting signal input cable.
- 11.3.2 Because the connection area of FPC and panel is not so strong, do not handle panel only by FPC or bend FPC.
- 11.3.3 Water drop on the surface or condensation as panel power on will corrode panel electrode.
- 11.3.4 As the packing bag open, watch out the environment of the panel storage. High temperature and high humidity environment is prohibited.
- 11.3.5 In the case the TFT LCD module is broken, please watch out whether liquid crystal leaks out or not. If your hand touches liquid crystal, wash your hands cleanly with water and soap as soon as possible

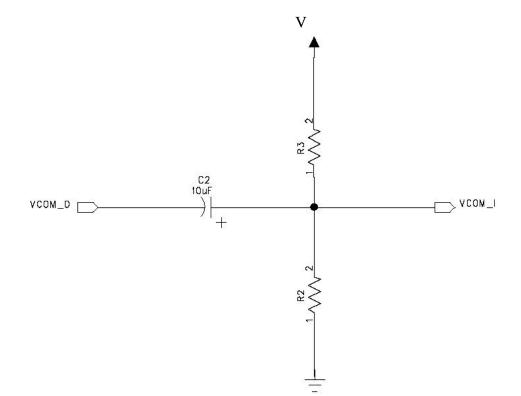

The information contained herein is the exclusive property of toppoly Optoelectronics corporation, and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of toppoly Optoelectronics corporation.

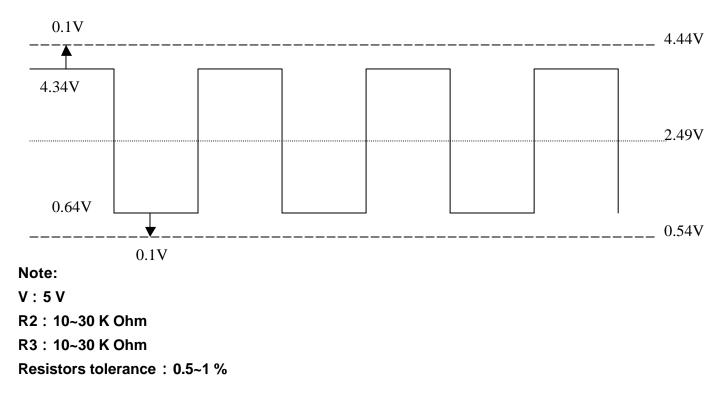

12. Application Note

12.1 Note for V-com circuit

The circuit is designed for V-com fine-tune, please refer the circuit below to design application circuit.

Vcom waveform

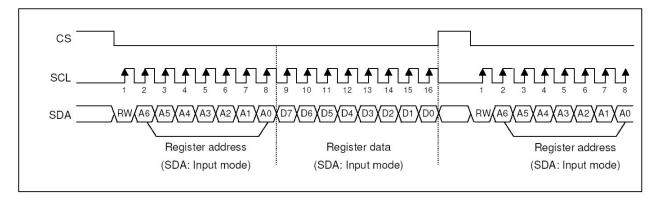

12.2 Note for SPI command

The LCM support the 3-pin serial interface to set internal register. Read/Write bit RW, Serial address A6 to A0 and serial data D7 to D0 are read at the rising edge of the serial clock, via the serial input pin. This data is synchronized on the rising edge of eighth serial clock and is then converted to parallel data. The serial interface signal timing chart is shown below.

Serial Interface Signal Timing Chart

Write Mode (RW=L)

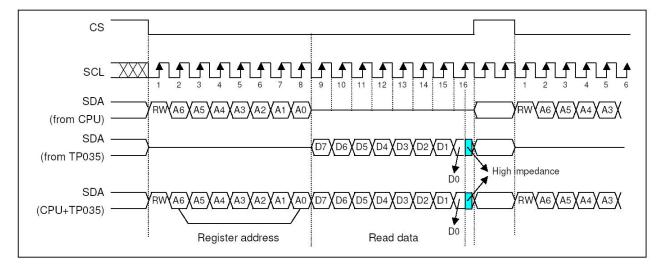

The shift register and counter are reset to their initial values when the chip select signal is inactive. Do not set the chip select signal to inactive between transmission of an 8-bit address and 8-bit data set for the command.

When using SCL wiring, the module has to be designed carefully to avoid any noise coming from reflection or from external sources. We recommand checking operation with the actual module.

If there is a break in data transmission by RESETB or CS pulse, while transferring a Command or Parameter, before Bit D0 of the byte has been completed, then LCM will reject the previous bits and have reset the interface such that it will be ready to receive the same byte re-transmitted when the chip select line (CS) is activated after RESETB have been High state.

Read Mode (RW=H)

The read mode of the interface means that the micro controller reads data from the LCM. To do so the micro controller first has to send a command: the read status command. Then the following byte is transmitted in the opposite direction. After that CS is required to go high.

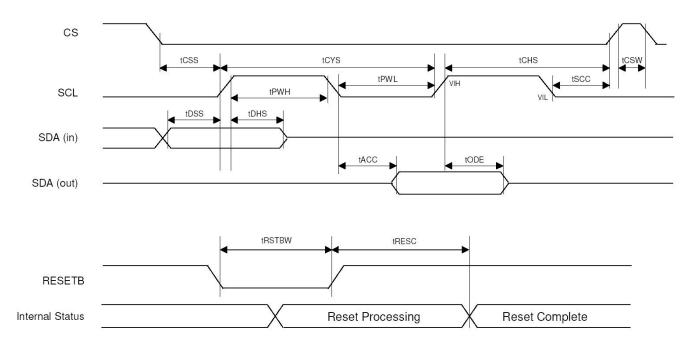

The LCM samples the SDA data input at rising SCL edges, but shifts SDA data output at falling SCL edges. Thus the micro controller is supposed to read SDA data at rising SCL edges.

After the read status command has been sent, the SDA line must be set to tristate not later then at the rising SCL edge of the last bit.

The LCM can read data of the Register0 to Register63

Serial interface and Reset waveform (VIH=0.8VDD1, VIL=0.2VDD1)

12.3 Note for FPC circuit layout

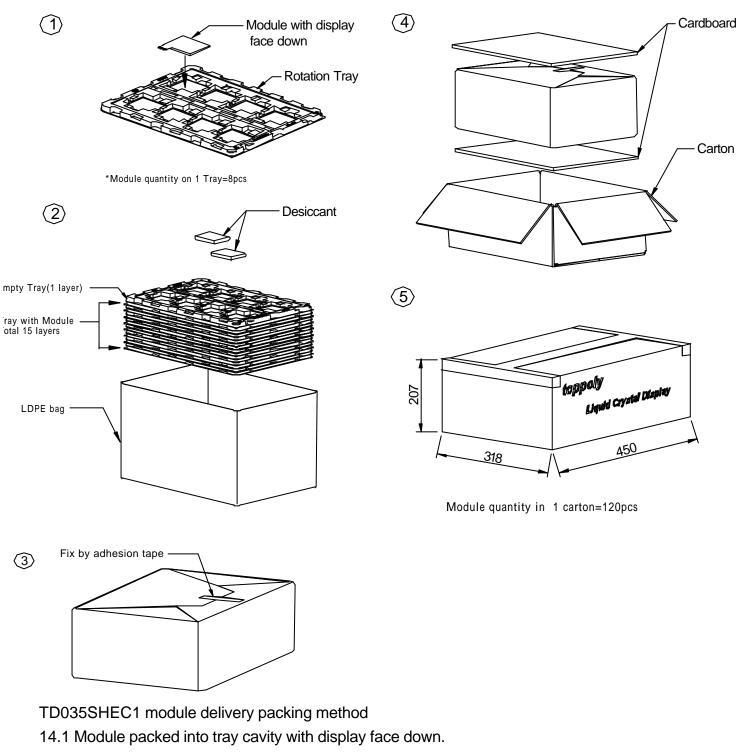

13. Mechanical Drawing

14. Packing Drawing

- 14.2 Tray stacking with 15 layers and with 1 empty tray above the stacking tray unit.
 - 2 pcs desiccant put above the empty tray.
- 14.3 Stacking tray unit put into the LDPE bag and fix by adhesive tape.
- 14.4 Put 1pc cardboard inside the carton bottom, then pack the finished package into the carton.
- 14.5 Carton sealing with adhesive tape.
