5.3 Driving Backlight

The backlight system is an edge – lighting type with a single CCFL (Cold Cathode Fluorescent Lamp). The characteristics of a single lamp are shown in the following tables.

| Lamp starting voltage | Vs | | | 1460 (0) | Vrms | Note 5-5 |

Note 5-1: Lamp current is measured with a high frequency current meter as show below.

Switching Frequency: (40~80)KHz

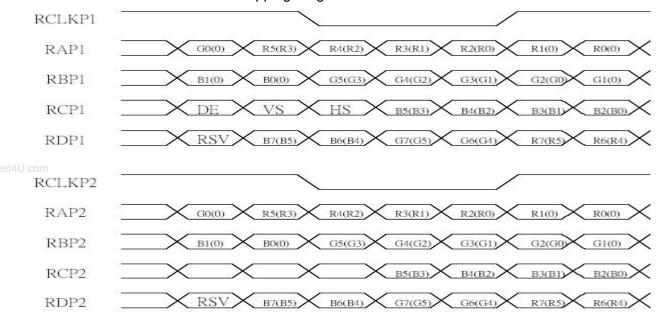

Note 5-2: $W = I_L \times V_L \times 4$

- Note 5-3: Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- Note 5-4: Brightness is decreased to the 50% of the initial value.
- Note 5-5: Above this value should be applied to the lamp for more than 1 second to startup, otherwise the lamp may be not to turn on.

Note 7-5: Definition of Luminance of White: measure the luminance of white at the center point of the panel.

Note 7-6: To be measured in dark room environment and after lighting the backlight for 30 minutes.

Note 7-7: Wn: Grey level L31 luminance of measurement area

Wn': Subsequent dark-window luminance of measurement area

The location measured will be exactly the same in both patterns.

Note 8-1: Evaluation should be tested after one hour of room temperature storage.

Note 8-2: Temperature and relative humidity range are show in the figure below.

Wet bulb temperature should be 39 max. and no condensation of water.

9. HANDLING CAUTIONS

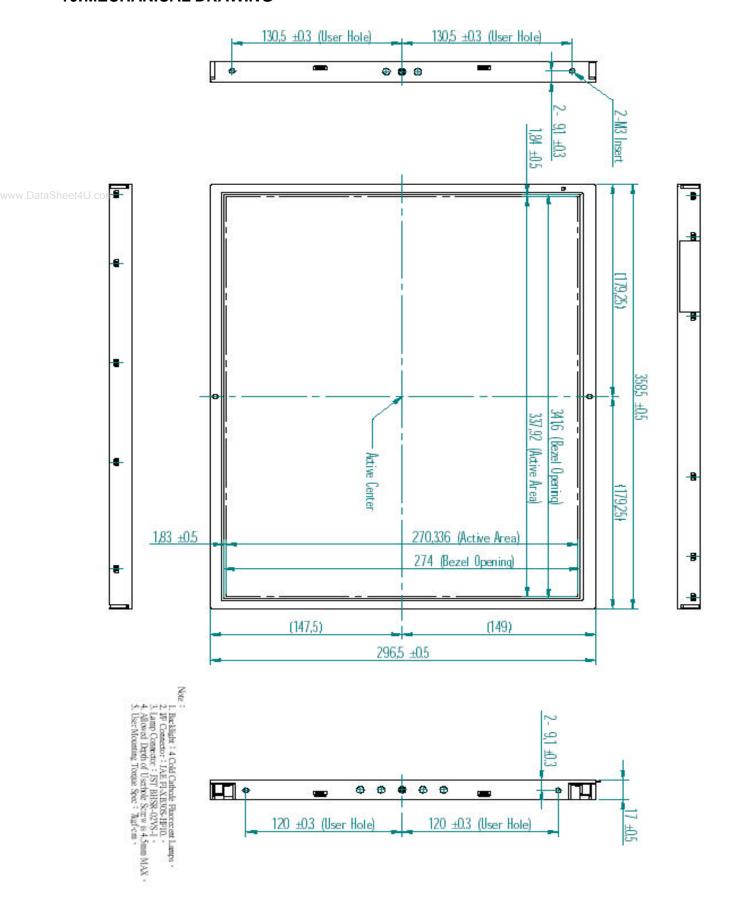

- 9.1 Module assembly working environment should in the clean room.
- 9.2 The polarizer is easy damaged, handle it carefully and do not press or scratch the surface by sharp material.
- 9.3 Panel has polarizer protective film in the surface please remove the protection film of polarizer slowly to prevent the electrostatic discharge.
- 9.4 It is not permitted the pressure or impulse on the module, it may cause LCD panel or Backlight damaged.
- 9.5 Turn off the power supply before connecting and disconnecting signal input cable.
- 9.6 The lamp wire is very weak, do not handle panel only by lamp wire.
- 9.7 As the packing bag open, watch out the environment of the panel storage. High temperature and high humidity environment is prohibited.
- 9.8 Please to storage the LCD module within the specification condition. High temperature or high humidity environment may reduce the module performance.
- 9.9 Do not disassemble the module.
- 9.10 Do not touch the backlight connecter. The backlight start voltage about 1000Volts.it may cause electrical shock.
- 9.11 Do not adjust the variable resistor that is located on the module back side.
- 9.12 I/F connector pins shall not to be touched directly with bare hands.
- 9.13 When the TFT LCD module is broken or liquid crystal leaks from the panel, it should be keep always from the eyes or month. If your hand touches liquid crystal, wash your hand cleanly by water and soap as soon as possible.
