SOLID STATE OPTRONICS

TD3083

Zero Volt Switching
800V
Triac Driver

Description

The TD3083 consists of a single input LED optically coupled to a zero-volt crossing triac driver. The TD3083 provides high input-to-output isolation and is designed to drive high-powered triacs. Typical uses include interfacing logic level control signals to equipment powered from $240V_{AC}$ lines and higher.

The TD3083 comes standard in a miniature 6 pin DIP package making it ideal for high-density board applications.

Applications

- Home Appliances
- Motor / Drive Controls
- Solid State Relays
- Solenoid / Valve Control
- Temperature Control
