

2 to 6W audio power amplifier with preamplifier

TDA1011A

The TDA1011A is a monolithic integrated audio amplifier circuit in a 9-lead single in-line (SIL) plastic package. The device is especially designed for portable radio and recorder applications and delivers up to 4 W in a 4 Ω load impedance. The device can deliver up to 6 W into 4 Ω at 16 V loaded supply in mains-fed applications. The maximum permissible supply voltage of 24 V makes this circuit very suitable for d.c. and a.c. apparatus, while the low applicable supply voltage of 5,4 V permits 9 V applications. The power amplifier has an inverted input/output which makes the circuit optimal for applications with active tone control and spatial stereo. Special features are:

- single in-line (SIL) construction for easy mounting
- separated preamplifier and power amplifier
- high output power
- thermal protection
- high input impedance
- low current drain
- limited noise behaviour at radio frequencies

HEATSINK DESIGN

Assume $V_p = 12$ V; $R_L = 4 \Omega$; $T_{amb} = 60$ °C maximum; $P_o = 3,8$ W.

The maximum sine-wave dissipation is 1,8 W.

The derating of 10 K/W of the package requires the following external heatsink (for sine-wave drive):

$$R_{th j-a} = R_{th j-tab} + R_{th tab-h} + R_{th h-a} = \frac{150 - 60}{1,8} = 50 \text{ K/W.}$$

Since $R_{th j-tab} = 10$ K/W and $R_{th tab-h} = 1$ K/W, $R_{th h-a} = 50 - (10 + 1) = 39$ K/W.

Notes

1. Measured with an ideal coupling capacitor to the speaker load.
2. Measured with a load resistor of 20 k Ω .
3. Measured with R2 = 20 k Ω .
4. Measured at P_o = 1 W; the frequency response is mainly determined by C1 and C3 for the low frequencies and by C4 for the high frequencies.
5. Independent of load impedance of preamplifier.
6. Unweighted r.m.s. noise voltage measured at a bandwidth of 60 Hz to 15 kHz (12 dB/octave).
7. Ripple rejection measured with a source impedance between 0 and 2 k Ω (maximum ripple amplitude: 2 V).
8. The total current when disconnecting pin 5 or short-circuited to ground (pin 9).
9. The tab must be electrically floating or connected to the substrate (pin 9).
