## MOUNTING INSTRUCTIONS

During soldering the tab temperature must not exceed 260°C and the soldering time must not be longer than 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.

## TDA 1170S

The junction to ambient thermal resistance of the TDA 1170S can be reduced by soldering the tabs to a suitable copper area of the printed circuit board (fig. 8) or to an external heatsink (fig. 9).

The diagram of fig. 10 shows the maximum dissipable power  $P_{tot}$  and the  $R_{th\ j-amb}$  as a function of the side "s" of two equal square copper areas having a thickness of 35  $\mu$  (1.4 mil).

## TDA 1170SH

The power dissipated in the circuit may be removed by connecting the tabs to an external heatsink according to fig. 12. The desired thermal resistance may be obtained by fixing the TDA1170SH to a suitable dimensioned plate as shown in fig. 13.
