

## Quasi Parallel Sound Processing with Quadrature Intercarrier Demodulator

**Technology:** Bipolar

### Features

- Very high input sensitivity
- Excellent signal to noise ratio
- Fast averaged AGC
- IF amplifier can be switched off for VTR mode
- Output signal stabilized against  $V_S$  variations
- Very few external components

### TDA4445B additional

- Targeting bistandard applications (B/G and L)
- Alignment free AM demodulator
- Low AM distortion

**Case:** DIP16

## Pin Description

Pin	Symbol	Function
1–16		IF input
3		If AGC time constant
8–9		Tuned circuit
11		Supply voltage
12		Sound-IF-output
13		Ground
2, 4, 7, 10, 14, 15		not connected

## TDA4445B additional

Pin	Symbol	Function
5		Average capacitor
6		AF output

## Circuit Description

This circuit includes the following functions

- Three symmetrical and gain controlled wide band amplifier stages, which are extremely stable by quasi DC coupling without feedback
- Averaged AGC with discharge control circuit
- AGC voltage generator

### Quasi parallel sound operation

- High phase accuracy of the carrier signal processing, independent from AM
- Linear quadrature demodulator
- Sound-IF-amplifier stage with impedance converter

### AM-Demodulation (TDA4445B only)

- Carrier controlled demodulator
- Audio frequency stage with impedance converter
- Averaged low pass AGC

## Absolute Maximum Ratings

## Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**TEMIC TELEFUNKEN microelectronic GmbH** semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**TEMIC** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

**We reserve the right to make changes to improve technical design and may do so without further notice.**

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
