

Bipolar IC

Features

- Features video / sound scart
- Active FM PLL demodulator
- AF control
- Alignment - free sound IF

Type	Ordering Code	Package
TDA 5940	Q67000-A 5144	P-DIP-24 (300 mil)

Functional Description and Application

Video IF-Section

Video IF-broadband amplifier followed by a quasi-synchronous demodulator for negative modulated IF-signals. A Full-SCART interface is included in the video section. A separate video output after the demodulator permits the installation of one or more sound traps at the input of the SCART-switch. The tuner AGC-threshold is set by means of a potentiometer, all other functions can be switched with open collector transistors.

Sound IF-Section

FM-IF-limiter with FM-PLL-demodulator. The AF-section has a Full-SCART switch followed by a volume control. The volume is controlled by an analog voltage.

Application

www.DataSheet4U.com

The TDA 5940 is suitable for application in television receivers with Full-SCART.

Circuit Description

Video IF-Section

www.DataSheet4U.com

The video IF-section incorporates a four-stage, capacitively coupled, symmetrical and controlled amplifier, a limiter with selection and a mixer for quasi-synchronous demodulation of negative modulated IF-signals followed by a video output amplifier. The video demodulator output and the SCART-switch input are connected by means of a sound trap. The SCART-switch has two inputs (for signals from video demodulator and SCART-socket) and two outputs (SCART-socket and TV-output). Parallel to the video output amplifier the video signal is used for generating the AGC-voltage. The control circuit is designed on the integralaction AGC-principle, employing a noise-free peak value detector. A delayed tuner AGC-voltage with positive control direction is derived from the AGC-voltage via a threshold amplifier that is set by means of an external potentiometer.

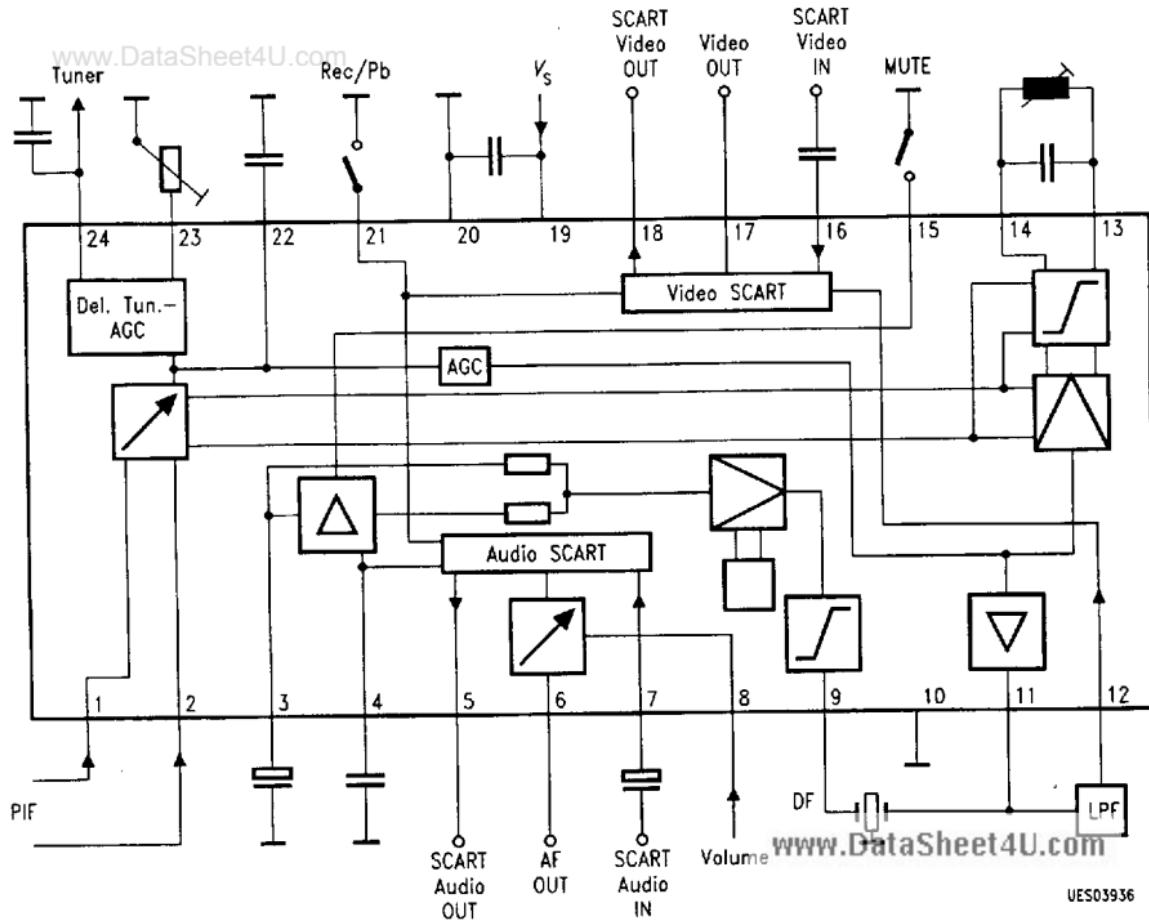

Sound IF-Section

The sound IF-section incorporates a five-stage, symmetrical limiter amplifier followed by a PLL-demodulator. The AF-section contains an analog switch for the Full-SCART-interface and a volume control with AF-output.

Pin Functions

Pin No.	Function
1	Video IF-input
2	Video IF-input
3	Low-pass capacitor
4	Deemphasis capacitor
5	Audio SCART-output
6	Audio output
7	Audio SCART-input
8	Audio volume control
9	Sound IF-input
10	Ground
11	Video demodulator output
12	Video input at sound trap output
13	Demodulator tank circuit
14	Demodulator tank circuit
15	MUTE control
16	Video SCART-input
17	Video output
18	Video SCART-output
19	+ V_S supply voltage
20	Ground
21	SCART-control
22	AGC-time constant
23	Delayed tuner AGC-threshold
24	Delayed tuner AGC output

Absolute Maximum Ratings

$T_A = 0$ to 85°C

Parameter	Symbol	Limit Values		Unit
		min.	max.	
Supply voltage	V_S		13.2	V
Junction temperature	T_J		150	$^\circ\text{C}$
Storage temperature	T_{stg}		125	$^\circ\text{C}$
Thermal resistance	$R_{\text{th JA}}$		70	K/W

Operating Range

Supply voltage	V_S	7.5	13.2	V
Supply voltage delayed tuner AGC	V_1	1	10	V
Ambient temperature during operation	T_A	0	85	$^\circ\text{C}$
Input frequency range	f_{IF}	12	80	MHz

Characteristics $T_A = 0 \text{ to } 85^\circ\text{C}$; $V_S = 12 \text{ V}$

Parameter	Symbol	Limit Values			Unit	Test Condition
		min.	typ.	max.		
Total current	I_{19}		38		mA	

SCART-Switch

H/open = SCART = PB L = RF	V_{21} V_{21}	2 0		5 1.5	V V	
-------------------------------	----------------------	--------	--	----------	--------	--

Volume Control Voltage

Minimal volume	V_8	0		5	V	
Maximal volume	V_8		3.6	5	V	

MUTE Voltage

H/open = AF ON L = AF MUTE	V_{15} V_{15}	2 0		5 1.5	V V	
-------------------------------	----------------------	--------	--	----------	--------	--

Dynamic Parameter**Video IF-Section**

IF-input sensitivity	$V_{1/2}$		70	100	μV	$V_{\text{video}} - 3 \text{ dB}$
Max. IF-input voltage	$V_{1/2}$	100	140		mV	$V_{\text{video}} + 3 \text{ dB}$
IF-control range	ΔV_{IF}		66		dB	
Video demodulator output voltage	$V_{11\text{PP}}$	1.35	1.5	1.65	V	$V_{\text{IFin}} = 10 \text{ mV}$

Gain of SCART-Switch

SCART/Video output	G_{16-17}		2			
Video/SCART output	G_{12-18}		-1			
Video/Video output	G_{12-17}		2			
Cross talk attenuation	a		50		dB	

Characteristics (cont'd)

Parameter	Symbol	Limit Values			Unit	Test Condition
		min.	typ.	max.		

Sound IF-section

Min. sound IF-input voltage (min. control)	V_9		70		µV	
AF-output voltage	V_6	500			mV	$\Delta f = 30 \text{ kHz}$ $f_{\text{mod}} = 1 \text{ kHz}$ $F_{\text{SIF}} = 5.5 \text{ MHz}$
SCART-AF-output voltage	V_5	500			mV	$\Delta f = 30 \text{ kHz}$ $f_{\text{mod}} = 1 \text{ kHz}$ $F_{\text{SIF}} = 5.5 \text{ MHz}$
Total harmonic distortion	$THD_{\text{AF}0}$			0.5	%	$\Delta f = 30 \text{ kHz}$ $f_{\text{mod}} = 1 \text{ kHz}$ $F_{\text{SIF}} = 5.5 \text{ MHz}$
Max. SCART-input voltage	$V_{7\text{RMS}}$			2	V	
Gain SCART-sound switch	G_{7-6}		1			$V_8 \geq 3.6 \text{ V}$

Alignment Instructions

At a video carrier input level of $V_{1/2} = 4 \text{ mVrms}$, $f_{\text{PIC}} = 38.9 \text{ MHz}$, and a superimposed AGC-voltage of $V_{22} = 1.5 \text{ V}$, the demodulator tank circuit is preliminarily aligned until a max. video signal 11Vpp is obtained at the video output. Any suitable video testsignal can be used for modulation. The AGC-voltage V_{22} is reduced until the signal is approx. 1 Vpp and the max. videosignal is obtained when fine-aligning the demodulator tank circuit. The alignment is not critical due to relatively large bandwidth of the demodulator tank circuit. Fine-tuning to intercarrier S/N, differential phase or 2T-pulse characteristics is possible.
