

## WIDE BAND VIDEO PROCESSOR

- Y, R-Y, B-Y INPUTS
- 2 RGB AND FAST BLANKING SOURCES
- RGB SOURCES MATRIXING INTO Y, R-Y, B-Y
- ANALOG CUT-OFF CONTROLS
- ANALOG CONTROLS FOR : BRIGHTNESS, CONTRAST, SATURATION ON ALL INPUT SIGNALS
- BEAM CURRENT LIMITER
- 62.5kHz GENERATOR (FOR TEA5640)
- INTERNAL INDEXATION BETWEEN SATURATION AND CONTRAST

### DESCRIPTION

The TEA5652 is a wide band flexible video processor intended for low-cost CTV. It integrates two RGB and fast blanking inputs, a beam current limiter and a 62.5kHz generator (for TEA5640).

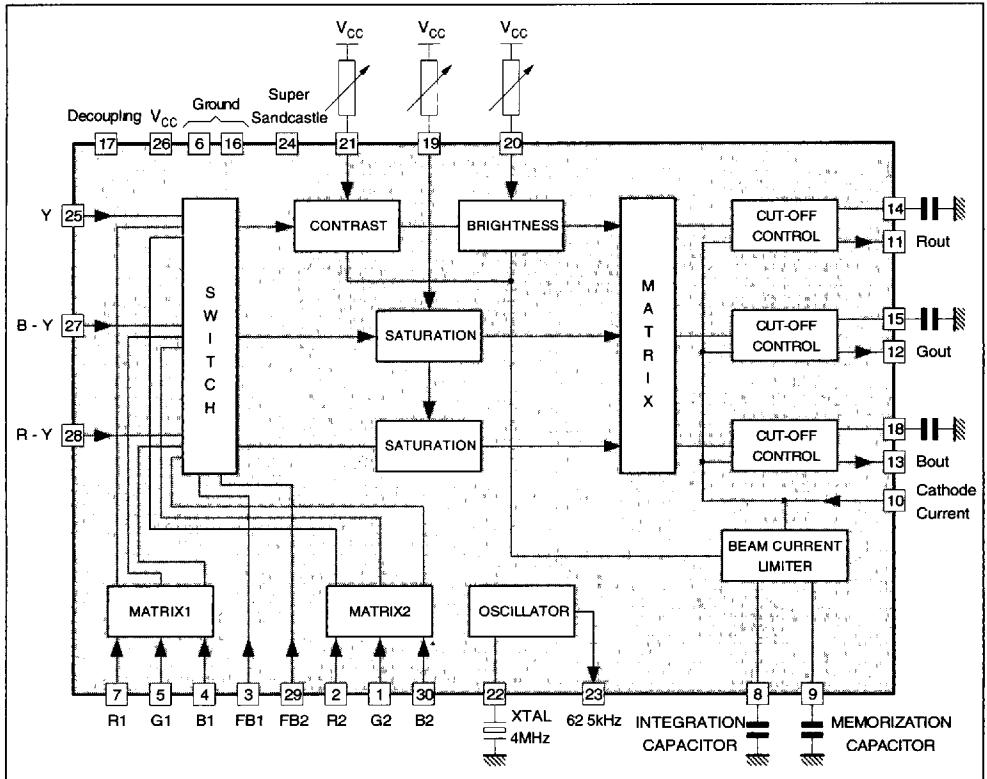

**SHRINK30**  
 (Plastic Package)

ORDER CODE : TEA5652S

## BLOCK DIAGRAM

## GENERAL DESCRIPTION

This circuit includes the following features.

- One Y, R-Y, B-Y input
- Two R, G, B sources with their associated fast blankings
- Analog inputs for contrast brightness and saturation controls both on TV and RGB pictures.
- Saturation contrast indexation internally made.
- Analog cut-off controls.
- Start beam current limiter.
- Average beam current limiter.
- 62.5kHz generator to drive TEA5640 multistandard chroma decoder.

## CLAMPING SYSTEM

Because the clamp information are selected after fast blanking switch it is necessary to clamp source by source line after line.

So during frame retrace the Y, R-Y, B-Y source is sampled during the burst gate of every line.

During the frame one source is selected by line : one line Y, R-Y, B-Y, one line RGB1, one line RGB2.

## Analog Controls

Brightness, contrast and saturation are controlled by analog inputs.

The indexation between saturation and contrast is achieved internally.

### Analog Cut-off Controls

The IC incorporates a standard sequential analog cut-off controls.

The controls are achieved sequentially during the four lines following the end of the frame retrace.

### Beam Current Limiter (see Figures 1 and 2)

A new beam current limiter is used in this circuit. It provides the following features.

- a short time constant (one frame)
- no brightness and contrast variation during the frame
- a limitation of peak magnitudes

### 62.5kHz Generator

This function is devoted to deliver the 62.5kHz frequency reference to the chroma decoder TEA5640 from a 4MHz crystal. By this way the

TEA5652 and TEA5640 can achieve a complete multistandard luma-chroma application.

### Beam Current Limiter Capacitors Setting

#### C1 CALCULATION

C1 is the capacitor which integrates the cathode current during the frame :

$$C1 = \frac{1.15 \times I_{CATH} \times T_{AV}}{100 \times V_{TH}}$$

$I_{CATH}$  : Average current per cathode

$T_{AV}$  : Averaging duration =  
Frame period - Frame retrace duration  
~ 18.5ms for 50Hz operation

$V_{TH}$  : Beam current limiter threshold voltage  
~ 2.5V for  $V_{CC} = 8V$

example : for  $I_{cathode} = 800\mu A$   $C1 = 68nF$

#### C2 SETTING

The value of the memorization capacitor is determined to obtain good picture stability from one frame to following one.

We advice a value of 680nF for standard operation.

| I <sub>COP</sub>                     | Capacitor Cut-off Positive Clamping Current    |  | 100      |      |      | $\mu A$ |
| I <sub>CON</sub>                     | Capacitor Cut-off Negative Clamping Current    |  | 100      |      |      | $\mu A$ |
| BS REF                               | Start Beam Current Detection Reference Voltage | Pin 10   | 2.5      |      |      | V       |
| I <sub>LEAK</sub>                    | Low Voltage Output Current                     | $V_{10} = 0V$  | 200      |      |      | $\mu A$ |

ELECTRICAL CHARACTERISTICS ( $V_{CC} = 8V$ ,  $T_{amb} = 25^{\circ}C$ , unless otherwise specified) (continued)

| Symbol | Parameter | Test Conditions | Min. | Typ. | Max. | Unit |
|--------|-----------|-----------------|------|------|------|------|
|--------|-----------|-----------------|------|------|------|------|

## AVERAGE BEAM CURRENT LIMITER (Pin 8)

|            |   |                           |     |  |         |
|------------|---|---------------------------|-----|--|---------|
|            | Max. Contrast Action                          | First action (decreasing) | -5  |  | dB      |
|            | Max. Brightness Action                        | After contrast decreasing | 80  |  | %       |
| $V_{C1TH}$ | C1 Threshold Voltage                          |                           | 2.5 |  | V       |
|            | C1 Discharging Current                        |                           | 10  |  | mA      |
|            | Current Ratio between Pin 10 and 8            |                           | 100 |  |         |
| $C_2 Y$    | $C_2$ Min. Voltage                            | $V_{C1} < V_{C1TH}$       | 2.2 |  | V       |
| $C_2 I_c$  | Max. $C_2$ Charging Current                   | $V_{C1} = 6V$             | 50  |  | $\mu A$ |
| $C_2 T_c$  | $C_2$ Threshold Voltage for Contrast Action   |                           | 2.6 |  | V       |
| $C_2 T_b$  | $C_2$ Threshold Voltage for Brightness Action |                           | 3.2 |  | V       |

## SUPERSANDCASTLE INPUT (Pin 24)

|               |                      |               |     |  |         |
|---------------|----------------------|---------------|-----|--|---------|
| FT            | Frame Threshold      |               | 0.7 |  | V       |
| LT            | Line Threshold       |               | 1.9 |  | V       |
| BGT           | Burst Gate Threshold |               | 4   |  | V       |
| $I_{OUT SSC}$ | Output Current       | $V_{24} = 0V$ | 30  |  | $\mu A$ |

## XTAL (Pin 22)

|            |                  |  |     |  |          |
|------------|------------------|--|-----|--|----------|
| DC XTAL    | DC Level         |  | 2.4 |  | V        |
| $Z_s$ XTAL | Output Impedance |  | 400 |  | $\Omega$ |

## 62.5kHz OUTPUT (Pin 23)

|       |                  |  |     |  |          |
|-------|------------------|--|-----|--|----------|
| $Z_s$ | Output Impedance |  | 250 |  | $\Omega$ |
| DC H  | DC Level High    |  | 6   |  | V        |
| DC L  | DC Level Low     |  | 1.3 |  | V        |
| DC    | Duty Cycle       |  | 100 |  | %        |
