

VI TELEFILTER**Filter specification****TFS 380C****1/5****Measurement Condition**

Ambient Temperature:	23 °C
Input Power Level:	0 dBm
Source impedance:	50 Ω
Load impedance:	50 Ω
Terminating impedances:	
input:	720 Ω -4.7pF
output:	1000 Ω -4.1pF

Characteristics**Remark:**

Reference level for the relative attenuation a_{rel} is the minimum pass band attenuation a_{min} . It is defined as the insertion loss a_e . The nominal frequency f_N is fixed to 380,0 MHz. The center frequency f_C is the arithmetic mean value of the upper and lower frequencies at the 1 dB filter attenuation level relative to the insertion loss a_e . The given values for the insertion loss, the relative attenuation a_{rel} and the group delay ripple have to be reached at the frequencies given below also if the centre frequency f_C is shifted due to the temperature coefficient of frequency TC_f in the operating temperature range and due to a production tolerance for the centre frequency f_C .
