General Description

TriQuint's TGA2814-SM is a high-power, S-band amplifier fabricated on TriQuint's production 0.25um GaN on SiC process (TQGaN25). The TGA2814-SM covers 3.1 – 3.5 GHz and provides > 80 W of saturated output power, 24 dB of large-signal gain, and achieves 55 % power-added efficiency.

The TGA2814-SM can also support a variety of operating conditions to best support system requirements. With good thermal properties, it can support a range of bias voltages and performs well under pulse operation.

With DC blocking capacitors on both RF ports, which are matched to 50 ohms, the TGA2814-SM is ideal for both commercial and military radar systems.

Lead-free and RoHS compliant.

Evaluation boards are available on request.
