

JFET Input Operational Amplifier - TL082M

Low-Noise JFET Input Operational Amplifier in bare die form

Rev 1.0
14/02/19

Description

The TL082M dual operational amplifier features JFET inputs (for high input impedance) coupled with bipolar output stages integrated on a single monolithic chip. This combination delivers low input bias and offset currents with fast slew rates. Low harmonic distortion and low noise provide high quality amplification for use in applications such as high speed integrators, fast D/A converters, sample and hold circuits and many other general purpose circuits. A low offset voltage temperature coefficient enables performance across the full military temperature range.

Features:

- Low Noise $e_n = 18nV/\sqrt{Hz}$ (typ)
- Low Harmonic Distortion : 0.003% (typ)
- Wide Common-Mode (to V_{CC+}) & Differential Voltage ranges
- Low Input Bias and Offset Currents
- High Slew Rate: $13V/\mu s$ (typ)
- High Input Impedance JFET-Input Stage
- Short-Circuit Protection & Latch-Up Free Operation

Ordering Information

The following part suffixes apply:

- No suffix - MIL-STD-883 /2010B Visual Inspection
- "H" - MIL-STD-883 /2010B Visual Inspection
+ MIL-PRF-38534 Class H LAT
- "K" - MIL-STD-883 /2010A Visual Inspection (Space)
+ MIL-PRF-38534 Class K LAT

LAT = Lot Acceptance Test.

For further information on LAT process flows see below.

Die Dimensions in μm (mils)

Supply Formats:

- Default – Die in Waffle Pack (100 per tray capacity)
- Sawn Wafer on Tape – On request
- Unsawn Wafer – On request
- Die Thickness \leftrightarrow $280\mu m$ (11 Mils) – On request
- Assembled into Ceramic Package – On request

Mechanical Specification

Die Size (Unsawn)	1640 x 1400 65 x 55	μm mils
Minimum Bond Pad Size	110 x 110 4.33 x 4.33	μm mils
Die Thickness	280 (± 20) 11.02 (± 0.79)	μm mils
Top Metal Composition	Al-Si-Cu 3.3 μm	
Back Metal Composition	N/A – Bare Si

Absolute Maximum Ratings¹

PARAMETER	SYMBOL	VALUE	UNIT
DC Supply Voltage (Referenced to GND)	V_{CC}, V_{EE}	± 18	V
DC Input Voltage Range (Referenced to GND) ²	V_{IDR}	± 15	V
DC Differential Input Range Voltage ³	V_{ID}	± 30	V
Output Short Circuit Duration	t_{SC}	Continuous	
Power Dissipation in Still Air	P_D	680	mW
Storage Temperature Range	T_{STG}	-65 to +150	°C
Operating Temperature Range	T_J	-55 to +125	°C

1. Operation above the absolute maximum rating may cause device failure. Operation at the absolute maximum ratings, for extended periods, may reduce device reliability. 2. The magnitude of the input voltage must not exceed the magnitude of the supply voltage or 15V, whichever is less. 3. Differential voltages are at INPUT+, with respect to INPUT-. 4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.

Recommended Operating Conditions

PARAMETER	SYMBOL	MIN	MAX	UNITS
Supply Voltage ⁵	V_{CC}	5	15	V
	V_{EE}	-5	-15	
Common-mode voltage	V_{CM}	$V_{EE} + 4$	V_{CC}	V
Operating Temperature Range	T_J	-55	+125	°C

5. V_{CC} and V_{EE} are not required to be of equal magnitude, provided that the total supply ($V_{CC} - V_{EE}$) is between 10V and 30V.

Electrical Characteristics ($V_{CC} = 15V, V_{EE} = -15V, T_J = -55^\circ C$ to $+125^\circ C$ unless specified otherwise)

PARAMETER	SYMBOL	CONDITIONS	LIMITS			UNITS	
			MIN	TYP	MAX		
Input offset voltage	V_{IO}	$R_S = 50\Omega, V_O = 0$	$T_J = 25^\circ C$	-	3	6	mV
			$T_J = \text{Full range}$	-	-	9	
Temperature coefficient of input offset voltage	ΔV_{IO}	$R_S = 50\Omega, V_O = 0$	$T_J = \text{Full range}$	-	18	-	$\mu V/^\circ C$
Input offset current ⁶	I_{IO}	$V_O = 0$	$T_J = 25^\circ C$	-	5	100	pA
			$T_J = \text{Full range}$	-	-	20	nA
Input bias current ⁶	I_{IB}	$V_O = 0$	$T_J = 25^\circ C$	-	30	200	pA
			$T_J = \text{Full range}$	-	-	50	nA
Common-mode input voltage range	V_{ICR}			± 11	-12 to +15	-	V
Maximum peak output voltage swing	V_{OM}	$R_L = 10k\Omega$	$T_J = 25^\circ C$	± 12	± 13.5	-	V
		$R_L = 2k\Omega$	$T_J = \text{Full range}$	± 10	-	-	
		$R_L = 10k\Omega$	$T_J = \text{Full range}$	± 12	-	-	

6. The input bias currents are junction leakage currents which approximately double for every $10^\circ C$ increase in junction temperature.
