

Features

- Output tracking tolerance $\leq \pm 0.2\%$
- 400 mA output current capability
- Enable Function
- Very low current consumption in OFF mode
- Wide operation range: up to 40 V
- Wide temperature range: $-40\text{ }^{\circ}\text{C} \leq T_j \leq 150\text{ }^{\circ}\text{C}$
- Output protected against short circuit
- Overtemperature protection
- Reverse polarity proof

Functional Description

The **TLE 4251** is a monolithic integrated low-drop voltage tracker in the very small SMD package P-TO252-5-1. It is designed to supply e.g. sensors under the severe conditions of automotive applications. Therefore the device is equipped with additional protection functions against over load, short circuit and reverse polarity.

Supply voltages up to 40 V are tracked to a reference voltage given to the adjust input via an external resistor.

The output is able to drive loads up to 400 mA while it follows e.g. the 5 V output of a main voltage regulator within an accuracy of 0.5%. For loads up to 300 mA the tracking accuracy is 0.2%.

The **TLE 4251** can be switched in stand-by mode via the enable EN input which causes the current consumption to drop to very low values. This feature makes the IC suitable for low power battery applications.

Figure 1 Pin Configuration (top view)

Pin No.	Symbol	Function
1	I	Input voltage
2	EN	Enable , high-active input
3	GND	Ground
4	ADJ	Adjust ; connect to the reference voltage via ext. resistor or micro-controller port
5	Q	Output voltage ; must be blocked by a capacitor $C_Q \geq 22 \mu\text{F}$, $\text{ESR} \leq 3 \Omega$ to GND
