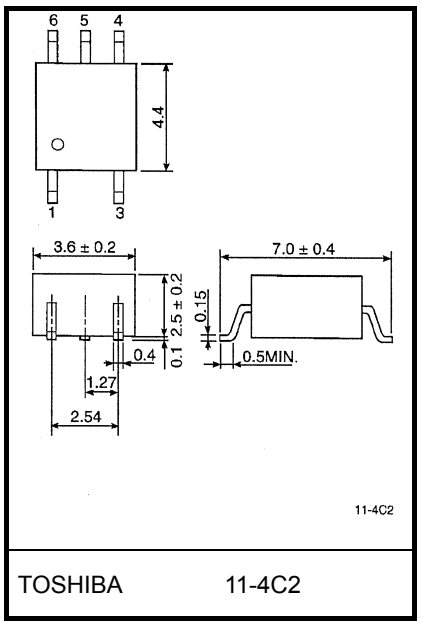
Unit in mm



TOSHIBA 11-4C2

Weight: 0.09 g(typ.)

The Toshiba TLP102 consists of a GaAℓAs light-emitting diode and an integrated high-gain, high-speed photodetector. The TLP102 is suitable for isolating input control signals to intelligent power modules. This unit is a 6-pin MFSOP.

The detector has a totem pole output stage to provide source drive and sink drive and features a built-in Schmitt trigger.

The detector IC has an internal shield that provides a guaranteed common-mode transient immunity of 10 kV/μs.

The TLP102 is of an inverter logic type. A buffer logic version, the TLP106, is also available.

- Inverter logic type (totem pole output)
- Guaranteed performance over temperature: -40~85°C
- Power supply voltage: -0.5~20 V
- Input current: IFHL = 3 mA (Max.)
- Switching time (tpLH/tpHL): 400 ns (Max.)
- Common-mode transient immunity: 10 kV/μs
- Isolation voltage: 3750 Vrms

- The information contained herein is subject to change without notice.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the “Handling Guide for Semiconductor Devices,” or “TOSHIBA Semiconductor Reliability Handbook” etc.
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.).These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury (“Unintended Usage”). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in his document shall be made at the customer’s own risk.
- The products described in this document shall not be used or embedded to any downstream products of which manufacture, use and/or sale are prohibited under any applicable laws and regulations.
